

### 1 A LDO Regulator (Operating Voltage up to 24 V) for Automotive Applications

NO.EC-184-160801

## OUTLINE

The R1501x is a CMOS-based positive voltage regulator (VR) IC specifically designed for automotive applications. The R1501xxxxB has features of high input voltage operating, 1 A output current drive, and low supply current.

A DMOS transistor\*1 is used for the driver, high voltage operating and low on resistance (0.6 Ω at  $V_{OUT} = 10\text{ V}$ ) device is realized. A standard regulator circuit with a current limit circuit and a thermal shutdown circuit are built in this IC.

As the operating temperature range is from  $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$  and maximum input voltage is up to 24 V, this IC is suitable for the constant voltage source for car accessories.

The regulator output voltage is fixed in this IC. Output voltage accuracy is  $\pm 2.0\%$  and output voltage range is from 3.0 V to 12.0 V with a step of 0.1 V, and from 12.5 V to 18.0 V with a step of 0.5 V. The chip enable pin realizes ultra low supply current standby mode.

The packages for this IC are the HSOP-6J for high density mounting of the IC on boards, and the TO-252-5-P2 for high wattage.

\*1 The DMOS (Double Diffused MOS) transistor adopted by this IC is characterized by a double diffusion structure which comprises a low density n-type (channel) diffused layer and a high density p-type (sources) diffused layer from the edge of the gate electrode. This IC possesses outstanding properties of high operating voltage and low on-resistance, which have been achieved by the channel length scaled down to submicron dimensions and decreased thickness of the gate oxide film.

## FEATURES

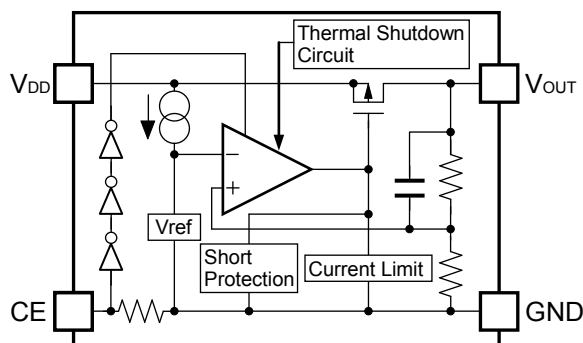

- Supply Current ( $I_{SS}$ ) ..... Typ. 70  $\mu\text{A}$
- Standby Current ( $I_{standby}$ )..... Typ. 0.1  $\mu\text{A}$
- Output Current ( $I_{OUT}$ )..... Min. 1 A
- Input Voltage Range ( $V_{IN}$ )..... 3.0 V to 24.0 V
- Ripple Rejection (RR) ..... Typ. 60 dB ( $V_{SET} = 5.0\text{ V}$ )
- Output Voltage Range ( $V_{OUT}$ )..... 3.0 V to 12.0 V (0.1 V steps)  
12.5 V to 18.0 V (0.5 V steps)
- Output Voltage Accuracy .....  $\pm 2\%$
- Temperature-Drift Coefficient of Output Voltage ..... Typ.  $\pm 100\text{ ppm}/^{\circ}\text{C}$
- Line Regulation ..... Typ. 0.05%/V
- Packages ..... HSOP-6J, TO-252-5-P2
- Operating Temperature range.....  $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$
- Built-in Current Limit Circuit
- Built-in Fold-Back Circuit
- Built-in Thermal Shutdown Circuit

## APPLICATIONS

- Power source for car accessories including car audio equipment, car navigation system, and ETC system.
- Power source for control units including EV inverter and charge control.

## PIN DESCRIPTIONS

### HSOP-6J

Pin No.	Symbol	Description
1	$V_{DD}$	Input Pin
2	GND <sup>*1</sup>	Ground Pin
3	GND <sup>*1</sup>	Ground Pin
4	CE	Chip Enable Pin, Active-high.
5	GND <sup>*1</sup>	Ground Pin
6	$V_{OUT}$	Output Pin

<sup>\*1</sup> When mounting to board, connect between three GND pins by wiring.

### TO-252-5-P2

Pin No.	Symbol	Description
1	$V_{DD}$	Input Pin
2	GND <sup>*2</sup>	Ground Pin
3	GND <sup>*2</sup>	Ground Pin
4	CE	Chip Enable Pin, Active-high.
5	$V_{OUT}$	Output Pin

<sup>\*2</sup> When mounting to board, connect between two GND pins by wiring.

<sup>\*3</sup> The tab on the bottom of the package enhances thermal performance and is electrically connected to GND (substrate level). It is recommended that the tab be connected to the ground plane on the board, or otherwise be left open.

**ABSOLUTE MAXIMUM RATINGS**

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

**RECOMMENDED OPERATING CONDITIONS**

Symbol	Item	Rating	Unit
V <sub>IN</sub>	Input Voltage	3 to 24	V
T <sub>a</sub>	Operating Temperature Range	-40 to 105	°C

**RECOMMENDED OPERATING CONDITIONS**

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

## TYPICAL APPLICATION

### External Components

Parts Type	Parts Name	Manufacturer
$C_{OUT}$	Ceramic Capacitor 10 $\mu$ F	MURATA: GRM32DB31E106K (size: 3225)

## TECHNICAL NOTES

### PCB Layout

Make  $V_{DD}$  and GND lines sufficient. If their impedance is high, noise pickup or unstable operation may result. Connect a capacitor  $C_{IN}$  with a capacitance value as much as 0.47  $\mu$ F or more between  $V_{DD}$  pin and GND, and as close as possible to the pins.

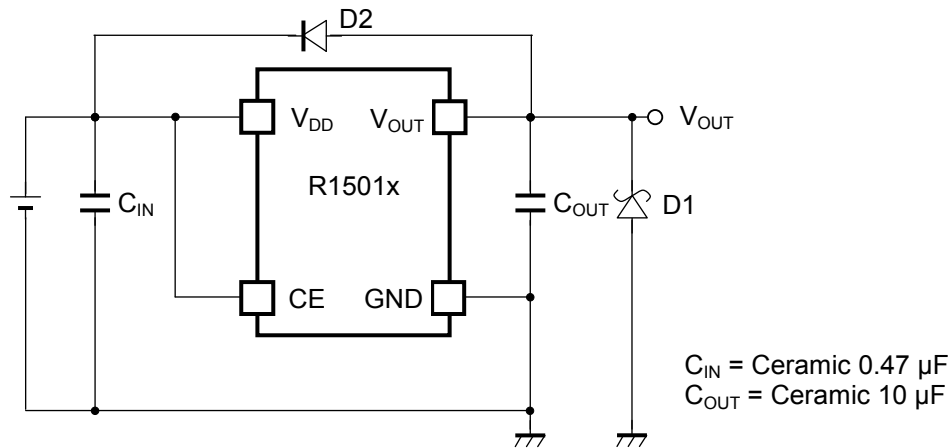

Connect external components, especially the output capacitor  $C_{OUT}$ , with a suitable value between the  $V_{DD}$  and GND, and as close as possible to the pins.

### Phase Compensation

In this IC, phase compensation is made for securing stable operation even if the load current is varied. For this purpose, use a capacitor  $C_{OUT}$  with good frequency characteristics and Equivalent Series Resistance (ESR).

When using a tantalum type capacitor that the ESR value is large, output might be unstable. Evaluate the circuit considering frequency characteristics.

As the bias and the temperature characteristics vary by the capacitor size, manufacturer, and part number, evaluate the circuit with actual using capacitors.

**TYPICAL APPLICATION FOR PREVENTING IC DESTRUCTION**

When a sudden surge of electrical current travels along the V<sub>OUT</sub> pin and GND due to a short-circuit, electrical resonance of a circuit involving an output capacitor (C<sub>OUT</sub>) and a short circuit inductor generates a negative voltage and may damage the device or the load devices. To prevent damage to the device or the load devices, connecting a schottky diode (D1) between the V<sub>OUT</sub> pin and GND is recommended.

In addition, connect D2 if V<sub>OUT</sub> pin could be higher than V<sub>DD</sub> pin.

C<sub>IN</sub> and C<sub>OUT</sub> are necessary for preventing unstable operation.

**POWER DISSIPATION (TO-252-5-P2)**

Power Dissipation ( $P_D$ ) depends on conditions of mounting on board.  
 This specification is based on the measurement at the condition below:

\* Measurement conditions

	Standard Land Pattern	Ultra High Wattage Land Pattern
Environment	Mounting on board (Wind velocity 0m/s)	
Board Material	Glass cloth epoxy plastic (Double layers)	Glass cloth epoxy plastic (Four-layers)
Board Dimensions	50mm x 50mm x 1.6mm	76.2mm x 114.3mm x 0.8mm
Copper Ratio	Top side: Approx. 50%, Back side: Approx. 50%	Top, Back side: Approx. 96%, 2nd, 3rd: 100%
Through - hole	$\phi$ 0.5mm x 24pcs	$\phi$ 0.4mm x 30pcs

\* Measurement Results

( $T_a=25^\circ\text{C}$ ,  $T_{j\text{max}}=150^\circ\text{C}$ )

	Standard Land Pattern	Ultra High Wattage Land Pattern
Power Dissipation	2350mW	4800mW
Thermal Resistance	$\theta_{ja}=(150-25^\circ\text{C})/2.35\text{W}= 53^\circ\text{C/W}$	$\theta_{ja}= (150-25^\circ\text{C})/4.8\text{W} = 26^\circ\text{C/W}$
	$\theta_{jc}= 17^\circ\text{C/W}$	$\theta_{jc}= 7^\circ\text{C/W}$

## ESR vs. Output Current

When using this IC, consider the following points:

The relations between  $I_{OUT}$  (Output Current) and ESR of an output capacitor are shown below.

The conditions when the white noise level is less than or equal to the specified value are marked as the hatched area in the graph.

### Measurement conditions

Input Voltage:  $V_{OUT} + 1\text{ V}$  to 24 V

Frequency Band: 10 Hz to 1 MHz

Temperature:  $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$

Capacitor:  $C_{IN}$  = Ceramic 0.47  $\mu\text{F}$

$C_{OUT}$  = Ceramic 10  $\mu\text{F}$

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to our sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of our company.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under our company's or any third party's intellectual property rights or any other rights.
5. The products in this document are designed for automotive applications. However, when using the products for automotive applications, please make sure to contact our sales representative in advance due to confirming the quality level.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact our sales or our distributor before attempting to use AOI.
11. Please contact our sales representatives should you have any questions or comments concerning the products or the technical information.
