This 90 degree sensor mounting system is designed to mount round sensors with outer diameters up to 30mm. Starting from the bottom up, the parts that make up this system are: a two-way mounting base, a round tube with a tube cap, a perpendicular two-way connector, another round tube with tube caps, a bracket clamp, and the sensor bracket. A couple of add-on pieces are available to make the system more portable and easier to adjust. A portable magnetic base can be added to enable users to quickly move the system to different locations without tools. A clamping lever kit can also be added, allowing users to adjust the height of the system by sliding the connectors along the round tube. Tubes with scales are available for precise adjusting of the system. All of these parts combine to make a highly customizable system that is easy to assemble, install, move, and adjust.
