4-BIT UNIVERSAL SHIFT REGISTER

DESCRIPTION — The '00 is a 4-bit universal shift register. As a high speed multifunctional sequential logic block, it is useful in a wide variety of register and counter applications. It may be used in serial-serial, shift left, shift right, serial-parallel, parallel-serial, and parallel-parallel data register transfers.

FUNCTIONAL DESCRIPTION — The Logic Diagrams and Truth Table indicate the functional characteristics of the '00 4-bit shift register. The device is useful in a wide variety of shifting, counting and storage applications. It performs serial, parallel, serial-to-parallel, or parallel-to-serial data transfers.

The '00 has two primary modes of operation, shift right ($Q_0 \rightarrow Q_1$) and parallel load, which are controlled by the state of the Parallel Enable (\overline{PE}) input. When the \overline{PE} input is HIGH, serial data enters the first flip-flop Q_0 via the J and \overline{K} inputs and is shifted one bit in the direction $Q_0 \rightarrow Q_1 \rightarrow Q_2 \rightarrow Q_3$ following each LOW-to-HIGH clock transition. The JK inputs provide the flexibility of the JK type input for special applications, and the simple D-type input for general applications by tying the two pins together. When the \overline{PE} input is LOW, the '00 appears as four common clocked D flip-flops. The data on the parallel inputs $P_0 - P_3$ is transferred to the respective $Q_0 - Q_3$ outputs following the LOW-to-HIGH clock transition. Shift left operation ($Q_3 \rightarrow Q_2$) can be achieved by tying the Q_n outputs to the P_{n-1} inputs and holding the \overline{PE} input LOW.

All serial and parallel data transfers are synchronous, occurring after each LOW-to-HIGH clock transition. Since the '00 utilizes edge triggering, there is no restriction on the activity of the J, K, P_n and \overline{PE} inputs for logic operation — except for the setup and release time requirements. A LOW on the asynchronous Master Reset (\overline{MR}) input sets all Q outputs LOW, independent of any other input condition.
