

1. Ordering Guide

The Si561 XO supports a variety of options including frequency, output format, and OE pin location/polarity, as shown in the chart below. Specific device configurations are programmed into the part at time of shipment, and samples are available in 1-2 weeks. Skyworks Solutions provides an online part number configuration utility to simplify this process. Refer to <https://www.skyworksinc.com/en/Products/Timing-Oscillators> to access this tool and for further ordering instructions.

Notes:

- Contact Skyworks for non-standard configurations.

Notes:

1. Total Stability includes temperature stability, initial accuracy, load pulling, VDD variation, and aging for 20 yrs at 70 °C.
2. OE includes a 50 kΩ pull-up to VDD for OE active high, or includes a 50 kΩ pull-down to GND for OE active low. FS includes a 50 kΩ pull-up to VDD.
3. R_{term} = 50 Ω to V_{DD} – 2.0 V (see Figure 4.1). Additional DC current from the output driver will flow through the 50 Ω resistors, resulting in a shift in common mode voltage. The measurements in this table have accounted for this.
4. R_{term} = 100 Ω (differential) (see Figure 4.2).
5. R_{term} = 50 Ω to GND (see Figure 4.2).
