

Evaluating the AD5758 Single-Channel, 16-Bit Current and Voltage Output DAC with Dynamic Power Control and HART Connectivity

FEATURES

Full featured evaluation board for the [AD5758](#)

On-board 2.5 V [ADR4525](#) reference

On-board [ADP1031-1](#) isolated PMU with integrated SPI signal isolation channels

[ACE](#) software for control

EVALUATION KIT CONTENTS

EVAL-AD5758SDZ evaluation board

EQUIPMENT NEEDED

[EVAL-SDP-CS1Z](#) board

Bench top power supply and connector cables

ADDITIONAL DOCUMENTS REQUIRED

[AD5758](#) data sheet

[ACE](#) User Manual

SOFTWARE REQUIRED

[ACE](#) software for control

GENERAL DESCRIPTION

This user guide describes the evaluation board for the [AD5758](#), a single-channel, voltage and current output, digital-to-analog converter (DAC) with on-chip dynamic power control (DPC) to minimize package power dissipation.

For full details, refer to the [AD5758](#) data sheet. Consult the data sheet when using the EVAL-AD5758SDZ. The configuration of the various link options is explained in the Evaluation Board Hardware section. The installation of the companion software is discussed in the Evaluation Software Quick Start Procedures section.

The EVAL-AD5758SDZ, as shown in Figure 1, requires the [EVAL-SDP-CS1Z](#) board. The EVAL-AD5758SDZ interfaces to the USB port of the PC via the [EVAL-SDP-CS1Z](#) board. The [Analysis|Control|Evaluation \(ACE\)](#) software allows simplified programming of the [AD5758](#), and is available with the EVAL-AD5758SDZ evaluation board.

EVALUATION BOARD HARDWARE

POWER SUPPLIES

The EVAL-AD5758SDZ evaluation board contains the ADP1031-1 power management unit (PMU), which generates three of four power supply inputs required by the AD5758: AV_{DD1} (+26.7 V), AV_{DD2} (+5.15 V), and AV_{SS} (-15.4 V), device. V_{LOGIC} is the fourth power supply required by the AD5758. The JP11 link provides the 3.3 V supply to the V_{LOGIC} input via the V_{LDO} output of the AD5758. The AV_{DD2} input can be connected to the AV_{DD1} input via the JP12 link if the V_{OUT2} supply from the ADP1031-1 is not in use. See Table 1 for link options and the default link positions.

The EVAL-AD5758SDZ evaluation board operates with a power supply range from -33 V on AV_{SS} to +33 V on AV_{DD1}, with a maximum voltage of 60 V between the two rails. AV_{DD2} requires a voltage between 5 V and 33 V. The V_{DPC+} pin of the AD5758 can be driven by AV_{DD1} via the JP6 link. The JP6 link bypasses the dc-to-dc circuitry.

SERIAL COMMUNICATION

The SDP-S system demonstration platform handles communication to the EVAL-AD5758SDZ via the PC. By default, the SDP-S board handles the serial port interface (SPI) communication, controls the RESET and LDAC pins, and monitors the FAULT pin of the AD5758.

The EVAL-AD5758SDZ evaluation board can disconnect from the SDP-S board and drive the digital signals from an external source by removing the appropriate links on the P10 link. The option to tie the RESET and LDAC pins to high or low levels can be accessed through the S2 and JP4 links.

AD5758 ADDRESS PINS

The AD5758 address pins, AD0 and AD1, are used in conjunction with the address bits within the SPI frame to determine which AD5758 device is being addressed by the system controller. The AD0 and AD1 pins can be configured through the JP7 and JP8 links.

Table 1. EVAL-AD5758SDZ Link Option Functions

Link	Default Link Position	Function
JP1	B	Position A selects the AV _{SS} pin to GND for the unipolar supply option (current output only). Position B selects the V _{OUT3} pin of the ADP1031-1.
JP2	Inserted	Connects the V _{LOGIC} pin of the AD5758 to the SVDD1 pin of the ADP1031-1.
JP3	A	Position A selects the 3.3 V output from the SDP-S to the MVDD pin of the ADP1031-1. Position B selects the 3.3 V input via the EXT+3.3V_ header to the MVDD pin of the ADP1031-1.
JP4	A	Position A connects the LDAC pin to GND. Position B connects the LDAC pin to the V _{LOGIC} pin.
JP5	A	Position A selects V _{OUT2} of the ADP1031-1 as the input voltage to the ADR4525. Position B selects the V _{LDO} pin as the input voltage to the ADR4525.
JP6	Not inserted	Shorts the V _{DPC+} pin to the AV _{DD1} pin, bypassing the positive dc-to-dc circuitry.
JP7	A	Position A connects the AD0 pin to GND. Position B connects the AD0 pin to the V _{LOGIC} pin.
JP8	A	Position A connects the AD1 pin to GND. Position B connects the AD1 pin to the V _{LOGIC} pin.
JP9	Inserted	Connects the return signal to GND.
JP10	B	Position A selects the REfout pin of the AD5758 as the input to the REFIN pin of the AD5758. Position B selects the ADR4525 output as the input to the REFIN pin.
JP11	Inserted	Selects 3.3 V output of the V _{LDO} pin to the V _{LOGIC} pin.
JP12	A	Position A selects V _{OUT2} of the ADP1031-1 as the input voltage to the AV _{DD2} pin. Position B selects the AV _{DD1} pin as the input voltage to the AV _{DD2} pin.
JP13	Inserted	Connects V _{OUT1} of the ADP1031-1 to the AV _{DD1} pin.
P10	Inserted	Provides options to disconnect from the SDP-S board and to drive digital signals from an external source. See Table 2 for the specific link options.
S2	Left Middle (default) Right	In the left position, this link connects the RESET pin to the V _{LOGIC} pin. In the middle position (default), this link controls the RESET pin via the SDP-S board. In the right position, this link connects the RESET pin to GND.

Table 2. Link Options for the P2_ Header

Pin No.	Position	Function
1, 2	Inserted	Connects the FAULT signal from the SDP-S to the MGP03 pin on the ADP1031-1.
	Not inserted	Disconnects the FAULT signal from the SDP-S to the MGP03 pin on the ADP1031-1
3, 4	Inserted	Connects the RESET signal from the SDP-S to the MGPI2 pin on the ADP1031-1.
	Not inserted	Disconnects the RESET signal from the SDP-S to the MGPI2 pin on the ADP1031-1.
5, 6	Inserted	Connects the LDAC signal from the SDP-S to the MGPI1 pin on the ADP1031-1.
	Not inserted	Disconnects the LDAC signal from the SDP-S to the MGPI1 pin on the ADP1031-1.
7, 8	Inserted	Connects the SCLK signal from the SDP-S to the MCK pin on the ADP1031-1.
	Not inserted	Disconnects the SCLK signal from the SDP-S to the MCK pin on the ADP1031-1.
9, 10	Inserted	Connects the SDO signal from the SDP-S to the MI pin on the ADP1031-1.
	Not inserted	Disconnects the SDO signal from the SDP-S to the MI pin on the ADP1031-1.
11, 12	Inserted	Connects the SDI signal from the SDP-S to the MO pin on the ADP1031-1.
	Not inserted	Disconnects the SDI signal from the SDP-S to the MO pin on the ADP1031-1.
13, 14	Inserted	Connects the SYNC signal from the SDP-S to the MSS pin on the ADP1031-1.
	Not inserted	Disconnects the SYNC signal from the SDP-S to the MSS pin on the ADP1031-1.
15, 16	Inserted	Connects the PWRGD signal from the SDP-S to the PWRGD pin on the ADP1031-1.
	Not inserted	Disconnects the PWRGD signal from the SDP-S to the PWRGD pin on the ADP1031-1.

EVALUATION SOFTWARE QUICK START PROCEDURES

INSTALLING THE ANALYSIS|CONTROL EVALUATION (ACE) SOFTWARE AND AD5758 PLUG-INS

The EVAL-AD5758SDZ software uses the Analog Devices, Inc., ACE software. For instructions the use of the ACE software, see the www.analog.com/ACE product page.

When the installation completes, the EVAL-AD5758SDZ evaluation board plug-in appears when the ACE software opens (see Figure 2).

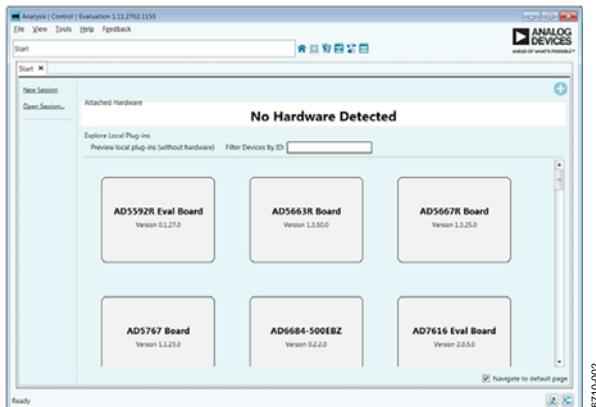

Figure 2. EVAL-AD5758SDZ Evaluation Board Plug-In Window after Opening the ACE Software

INITIAL SETUP

To set up the EVAL-AD5758SDZ, take the following steps:

1. Connect a USB cable to the PC and then to the SDP-S board.
2. Connect the SDP-S board to the EVAL-AD5758SDZ. The PC recognizes the EVAL-AD5758SDZ.
3. Power up the EVAL-AD5758SDZ with the relevant power supplies.
4. If not opened already, open the ACE software. The EVAL-AD5758SDZ appears in the Attached Hardware pane.

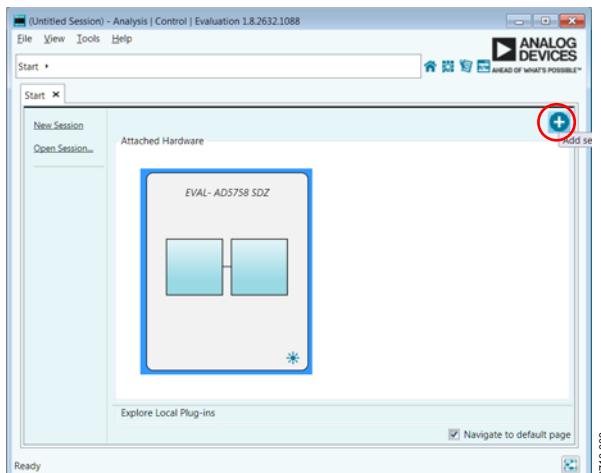

Figure 3. EVAL-AD5758SDZ Plug-In Not Installed

5. When setting up the evaluation board for the first time, the EVAL-AD5758SDZ plug-in may need to be installed. If the plug-in appears as shown in Figure 6, go to Step 7. If the plug-in appears as shown in Figure 3, click the button that is circled in red in Figure 3. After clicking this button, the pop-up window shown in Figure 4 appears. Click Yes.

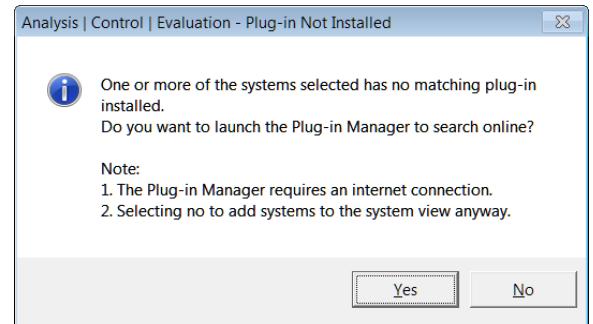

Figure 4. Installing Plug-In Pop-Up Window

6. A new window appears, as shown in Figure 5. Navigate to the Board.AD5758 plug-in and click Install Selected. The EVAL-AD5758SDZ plug-in installs and is displayed, as shown in Figure 6.

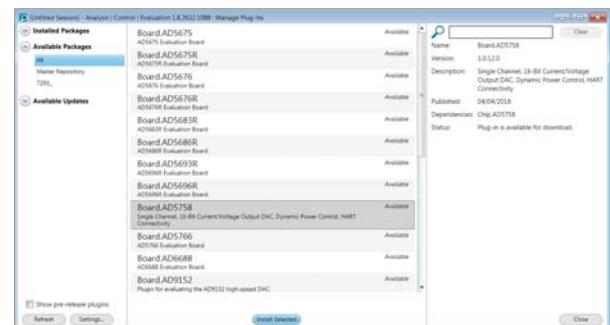

Figure 5. Plug-In Manager Window

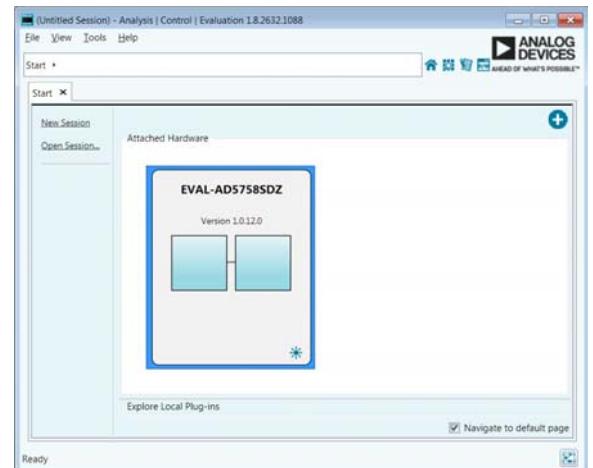

Figure 6. Attached Hardware Pane with EVAL-AD5758SDZ Connection

7. Double-click EVAL-AD5758SDZ to open the AD5758 block diagram (see Figure 7). The **INITIAL CONFIGURATION** pane appears on the left side of the window. Several register settings can be configured in this pane and are written to the device in the appropriate order. The **DIG_DIAG_STATUS**, **RESET_OCCURRED**, and **CAL_MEM_UNREFRESHED** LED indicators in the window are illuminated red by default.

Writing the initial configuration values clears these error flags. If the device is power cycled, or if the USB cable is disconnected and reconnected while the ACE software is open, contact with the EVAL-AD5758SDZ can be lost. If contact is lost, click the **System** tab, click the **USB** symbol on the EVAL-AD5758SDZ, and then click **Acquire** to communicate with the EVAL-AD5758SDZ.

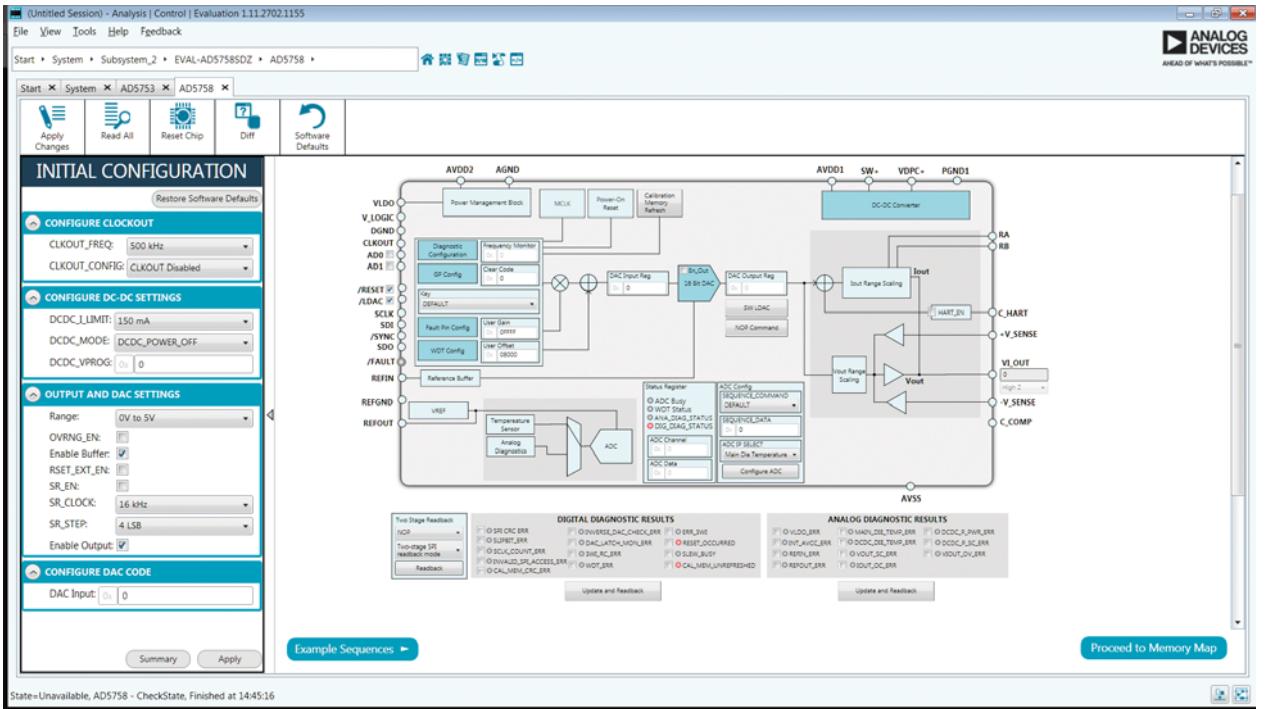

Figure 7. AD5758 Block Diagram in the ACE Software

AD5758 BLOCK DIAGRAM AND FUNCTIONS

The [AD5758 ACE](#) block diagram, as shown in Figure 8, appears similar to the block diagram shown in the [AD5758](#) data sheet for simplified correlation to the functions on the EVAL-AD5758SDZ evaluation board with the descriptions given in the [AD5758](#) data sheet.

A full description of each block and register setting is available in the [AD5758](#) data sheet. The full screen [AD5758](#) block diagram, with labels, is shown in Figure 8. Table 3 describes the functionality of each block.

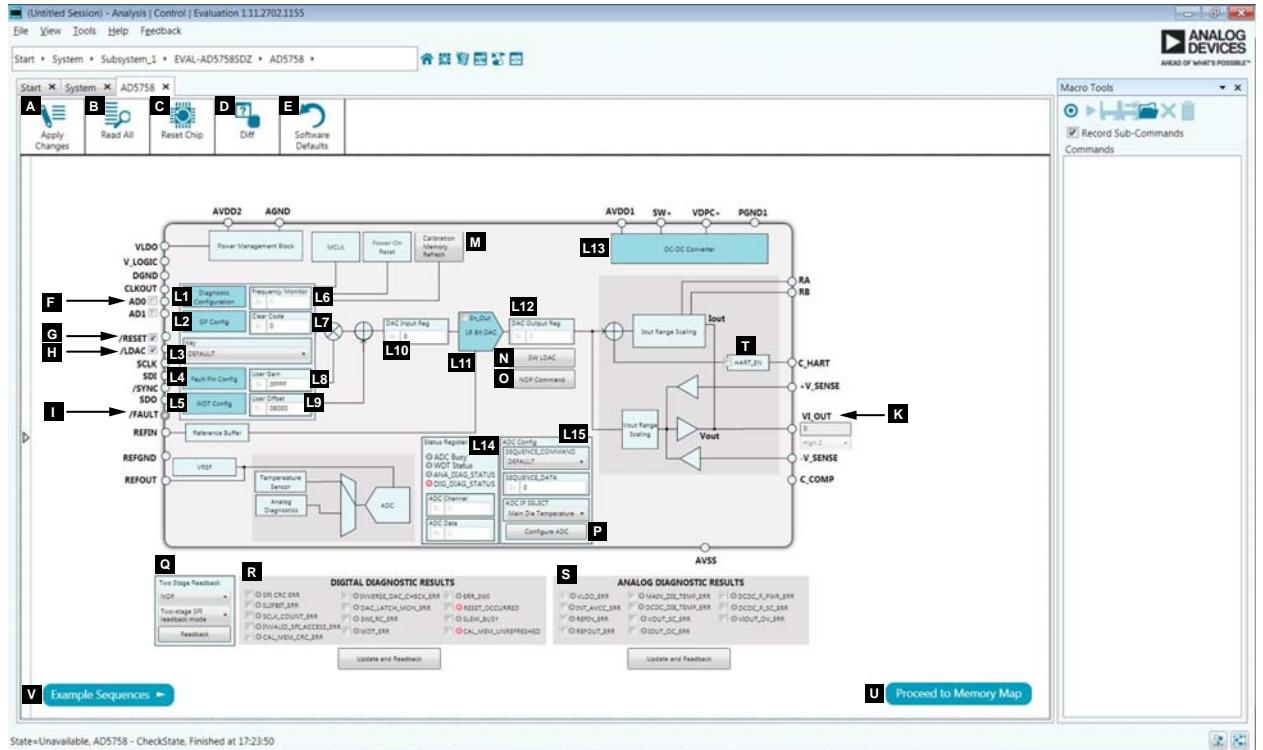

Figure 8. [AD5758](#) Block Diagram with Labels

16710-006

Table 3. [AD5758](#) Block Diagram Label Functions (See Figure 8)

Label	Function Description
A	To apply any changes made to the block diagram or to register values in the memory map to the device, click Apply Changes .
B	To read back all of the registers of the device, click Read All .
C	Click Reset Chip to reset the AD5758 . The Reset Chip button has the same functionality as the software reset of the AD5758 .
D	Click Diff to show the registers that are different from the data stored on the device. This function shows what has changed since the last time the registers were read.
E	Click Software Defaults to load the software defaults of the device. These values are not written to the hardware. Click Apply Changes (Label A in Figure 8) to write the software default values to the hardware.
F	The AD0 and AD1 check boxes set the device under test (DUT) address of the device and must correspond to the JP12 and JP14 links on the hardware. If either box is checked, this represents a high state. If either box is unchecked, this represents a low state.
G	If the /RESET box is checked, the SDP-S sets the RESET pin high. Otherwise, the SDP-S pulls RESET low.
H	If the /LDAC box is checked, the SDP-S sets the LDAC pin high. Otherwise, the SDP-S pulls LDAC low.
I	The ACE plug-in monitors the FAULT pin. If the FAULT pin is low, the /FAULT indicator LED illuminates red.
K	The VI_OUT field displays the calculated output at the V_{OUT} pin and displays if the output is in volts, milliamperes, or is high impedance (high-Z).
Lx	The graphical user interface (GUI) access on several registers. Pop-ups, dropdown menu, and hexadecimal text fields are available in the GUI to configure several registers of the AD5758 . To write the changes to the device, click Apply Changes . The functions within the GUI that control various registers (Label L1 through Label L15 in Figure 8) are described in Table 4.
M	The Calibration Memory Refresh button initiates a write to the key register to perform a calibration memory refresh.
N	The SW LDAC button initiates a write to the key register to perform a software LDAC command.
O	The NOP Command button initiates a write to Address 0x00 for a no operation (NOP) command.
P	The Configure ADC button writes the data selected in the ADC Config pane (Label L15) to the ADC configuration register.

Label	Function Description
Q	The Two Stage Readback pane initiates two-stage readback through the two-stage readback select register. Click Readback to initiate a write to the two-stage readback select register and issue a NOP command.
R	In the DIGITAL DIAGNOSTIC RESULTS pane, click Update and Readback Digital Diagnostic Result button to trigger a write 1 to clear operation and initiate a readback from the digital diagnostic result register.
S	In the ANALOG DIAGNOSTIC RESULTS pane, click Update and Readback Analog Diagnostic Result button to trigger a write 1 to clear operation and initiate a readback from the analog diagnostic result register.
T	If the HART_EN box is checked, the HART_EN bit = 1 in the General-Purpose Configuration 1 register.
U	Click Proceed to Memory Map to open the AD5758 memory map (see Figure 9).
V	Click Example Sequences to open the example sequences window (see Figure 15).

Table 4. Register Controls Accessible via the GUI (See Label Lx in Table 3 and in Figure 8)

Label	Function Description
L1	The Diagnostic Configuration button activates the associated pop-up menu.
L2	When the GP Config button clicked, a pop-up menu appears.
L3	When the Key register menu is clicked, a dropdown list appears.
L4	When the Fault Pin Config button is clicked, a pop-up menu appears.
L5	When the WDT Config button is clicked, a pop-up menu appears.
L6	The Frequency Monitor text field displays the value in the frequency monitor when read.
L7	The Clear Code text field inserts a clear code value in hexadecimal format.
L8	The User Gain text field inserts a user gain value in hexadecimal format.
L9	The User Offset text field inserts a user offset value in hexadecimal format.
L10	The DAC Input Reg text field inserts the DAC value in hexadecimal format.
L11	The 16 Bit DAC block opens a pop-up menu when clicked.
L12	The DAC Output Reg control displays the hexadecimal value currently set in the DAC output register.
L13	The DC-DC Converter block opens the dc-to-dc configuration pop-up menu.
L14	The Status Register pane displays the contents of the status register including any ADC conversion result.
L15	The ADC Config pane contains a combination of dropdown menus and a text field to enter the ADC input data.

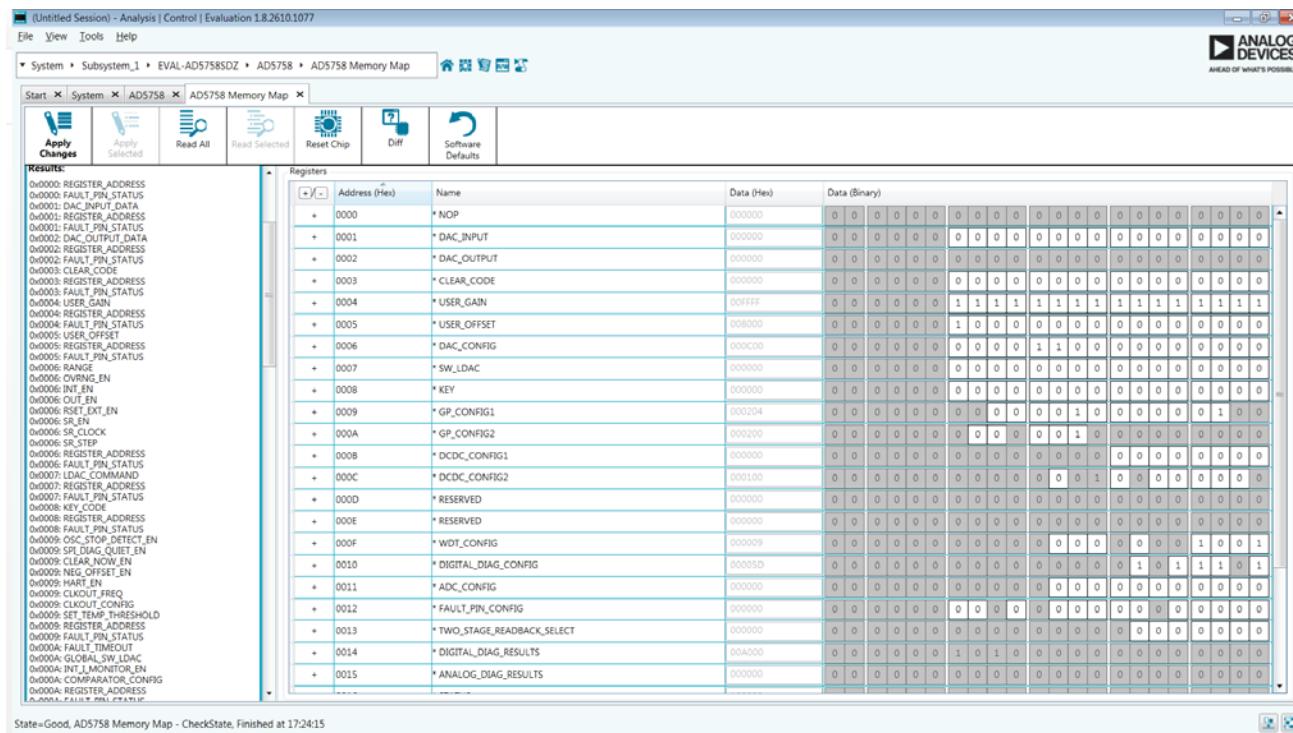

Figure 9. AD5758 Memory Map in the ACE Software

16710-07

INITIAL CONFIGURATION

An initial configuration wizard is available when opening the **AD5758** plug-in. The initial configuration wizard allows quick configuration of the **AD5758** and provides configuration of the clock output in the general-purpose configuration register, the dc-to-dc settings, DAC configuration, and the DAC input register. Clicking the **Apply** button initiates the configured settings in the order of the recommended power-up sequence described in the **AD5758** data sheet.

DC-TO-DC CONVERTER SETTINGS

If the V_{DPC+} pin is not tied directly to AV_{DD1} , enable the dc-to-dc converter for proper operation. This step must be completed before configuring the DAC output. The **DC-DC Configuration** pop-up menu, as shown in Figure 10, contains the dc-to-dc settings required to configure the **AD5758** output properly. After the desired settings are selected, click the **Close** button and then click **Apply Changes**.

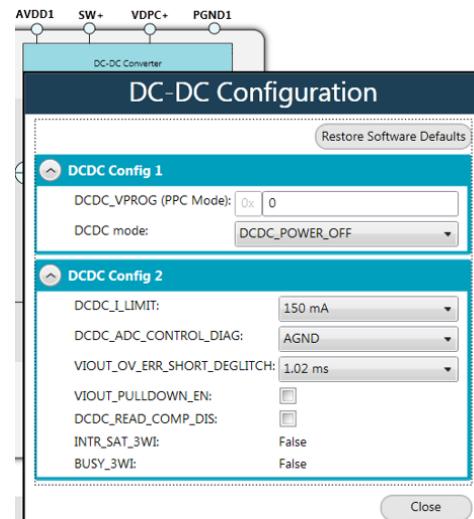

Figure 10. DC-DC Configuration Pop-Up Menu

16710-08

SETTING THE DAC OUTPUT

To configure the DAC output, use the **DAC Config Register** pop-up menu (see Figure 11). Click the **16 Bit DAC** block in the block diagram to display the DAC configuration register. Select the appropriate settings, and then click **Apply Changes**. It is recommended to disable the output until the correct value in the DAC input register is written to the device.

To change the DAC voltage or current output level, write the appropriate hexadecimal code to the DAC input register, and then click **Apply Changes**. Click **SW LDAC** to issue a software LDAC command, or pull the LDAC pin low to update the DAC output register with the values in the DAC input register. Enable the DAC output by checking the **OUT_EN (Enable VI_OUT)** checkbox, and then click **Apply Changes**. The programmed voltage or current is then reflected at the **VI_OUT** pin.

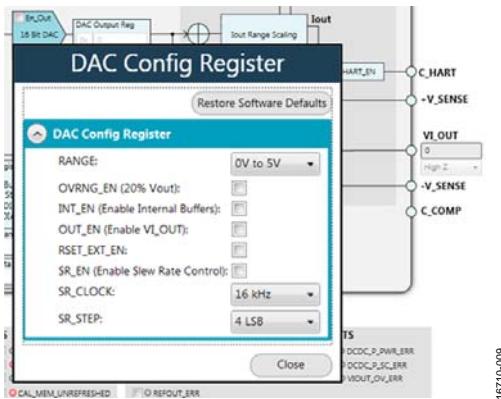

Figure 11. AD5758 DAC Config Register Pop-Up Menu

WRITING TO THE ADC CONFIGURATION REGISTER

The procedure to set up and configure the ADC input node is discussed in the [AD5758](#) data sheet. For this reason, writing to the ADC configuration register through the **Apply Changes** function is disabled.

The dropdown list in the **SEQUENCE_COMMAND** pane contains only an initiate single conversion command. The hexadecimal text field in the **SEQUENCE_DATA** pane is unused and remains at 0. The dropdown list in the **ADC_IP_SELECT** pane is used to select the desired input node for the ADC to convert. Click **Configure ADC** to initiate a write to the ADC configuration register. A register read must be performed to see the ADC result in the status register.

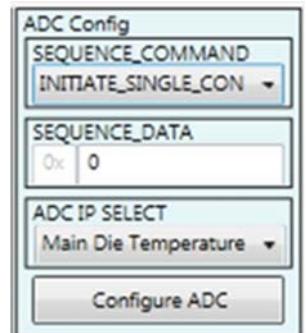

Figure 12. AD5758 ADC Configuration Register

UPDATING DIAGNOSTIC RESULTS

The [AD5758](#) has a digital diagnostic results register and an analog diagnostic results register, which contain error flags for the on-chip digital and analog diagnostic features. Writing 1 to the respective error flags updates the error flag status.

To update the digital and analog diagnostic result registers, click **Update and Readback**. This button initiates the writing of a 1 to the selected error flag and then reads back the updated diagnostic result. Figure 13 shows the digital diagnostic results register. Figure 14 shows the analog diagnostic results register.

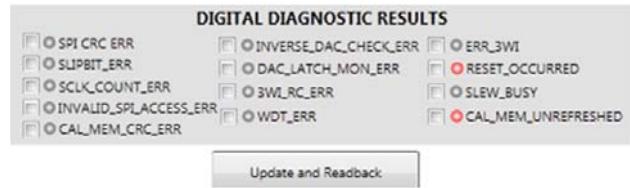

Figure 13. AD5758 Digital Diagnostic Register

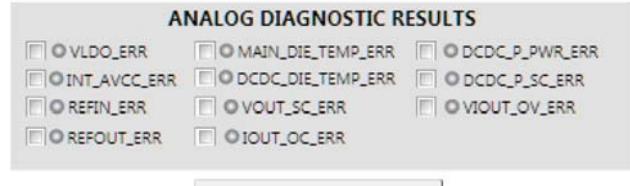

Figure 14. AD5758 Analog Diagnostic Register

EXAMPLE CONFIGURATION SEQUENCES

Several example configuration sequences are available. Click **Example Sequences**, and the window shown in Figure 15 appears. To enable any of the sequences, click the relevant sequence button, as shown in Figure 16. The sequence runs immediately and the output changes accordingly. To return to the main window, click **Back to AD5758**.

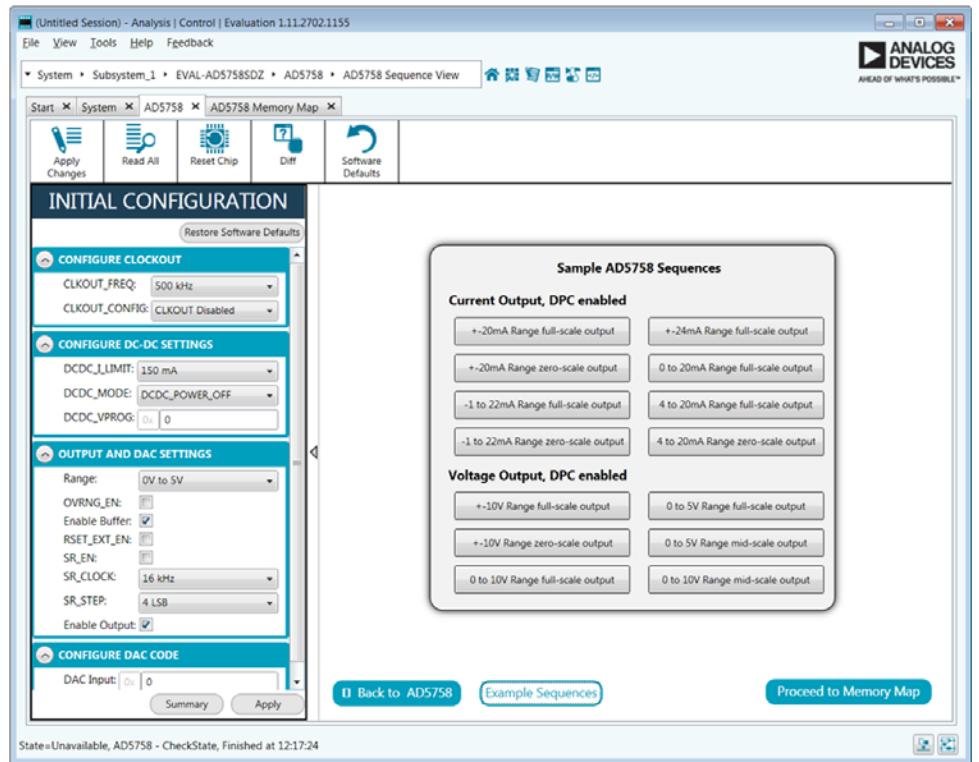

Figure 15. Example Sequences Window

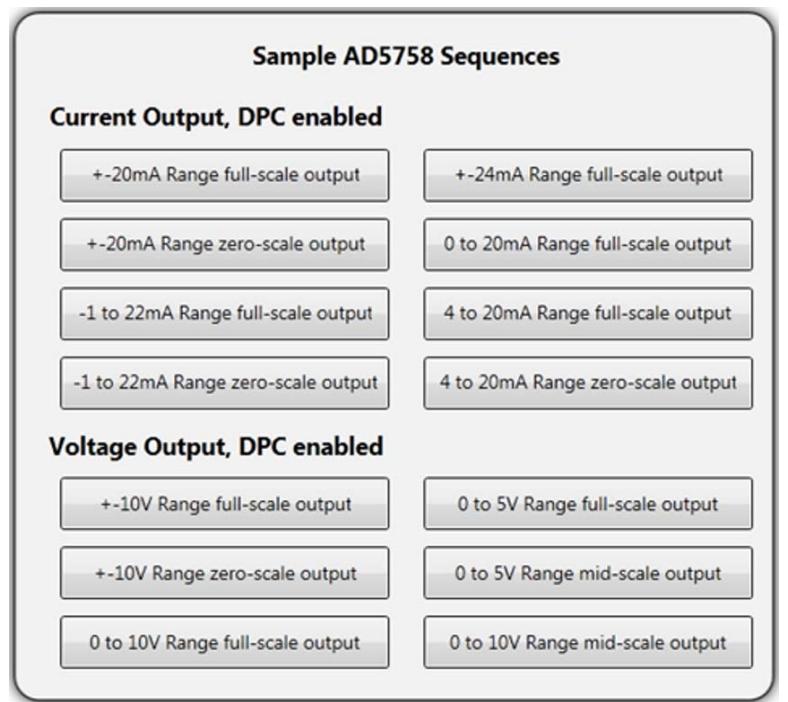

Figure 16. Selecting an Example Sequence

ACE TOOL VIEWS

The [ACE](#) software provides additional functionality to the main view described in this user guide. Open these views from the **View** menu on the application toolbar. The [ACE](#) software features a macro tool, a register debugger tool, and an events tool.

MACRO TOOL

The macro tool records and saves commands as an [ACE](#) macro file. This feature is useful when sharing macros with other users to perform the same task multiple times. The user can import and run an [ACE](#) macro file.

REGISTER DEBUGGER TOOL

Use the register debugger tool to perform raw writes to and reads from the device. The register debugger affects only the hardware and does not write to the memory map of the [ACE](#) software.

EVENTS TOOL

The events tool view contains a list of errors, warnings, and information messages generated within the application software.

C18	Capacitor, ceramic, X7R	Yageo	CC0603KRX7R9BB103
C27	Capacitor, ceramic, X7R, general-purpose	Murata	GRM188R71A225KE15D
P8, P9	Connector, PCB, pin socket	Vero Technologies	66-3472
R12	Resistor, thin film, chip, high reliability	Panasonic	ERA-6AEB202V
R19, R32, R35	Resistor, thick film, chip	Multicomp	MC0063W06031100K
R36	Resistor, precision, thick film, chip	Panasonic	ERJ-6ENF2000V
R37	Resistor, precision, thin film, chip	TE Connectivity	CPF0603B20RE1
TP1, TP2	Connector, PCB test point, green	Vero Technologies	20-313138

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
