R1513S Series

AEC-Q100 Grade 1 Compliant

36 V, 0.8% Accuracy, 300 mA, Voltage Regulator for Automotive Applications

NO.EC-321-190829

OUTLINE

The R1513S is a CMOS-based voltage regulator (VR) that specifically designed for automotive applications featuring 300 mA output current and 36 V input voltage. Internally, the R1513S consists of a fold-back protection circuit, a short current protection circuit and a thermal shutdown circuit in addition to the basic regulator circuit.
The performance is specified for 25°C with ±0.8% output voltage accuracy and for the −40°C to 125°C temperature range with ±1.0% output voltage accuracy. The operating temperature range is −40°C to 125°C and the maximum input voltage is 36 V. All these features make the R1513S ideal for power source for car accessories and electronic control units in automotive vehicles.
The R1513S is available in 1.2 V, 1.5 V, 1.8 V, 3.3 V, 3.4 V and 5.0 V fixed output voltage options. By using external divider resistors, the output voltage can be set over a 1.2 V to 18.0 V range.
The R1513S is offered in a 6-pin HSOP-6J high wattage package.

FEATURES

- Input Voltage (Maximum Ratings)·················· 3.5 V to 36 V (50 V)
- Operating Temperature Range······················ −40°C to 125°C
- Supply Current ·· Typ. 75 μA
- Standby Current ·· Typ. 0.1 μA
- Dropout Voltage ·· Typ. 0.32 V (I_{OUT} = 300 mA, V_{OUT} = 5.0 V)
- Output Voltage Accuracy ····························· ±0.8% (Ta = 25°C)
  ±1.0% (−40°C to 125°C)
- Line Regulation ··· Typ. 0.01%/V (V_{DD} = V_{OUT} + 1 V to 36 V)
- Package Type ·· HSOP-6J
- Output Voltage ·· 1.2 V / 1.5 V / 1.8 V / 3.3 V / 3.4 V / 5.0 V
- Short-current Protection Circuit ····················· Current Limit Typ. 50 mA
- Fold-back Protection Circuit ························· Current Limit Typ. 450 mA
- Thermal Shutdown Circuit···························· Shutdown at Typ. 160°C
- Ripple Rejection ······································· Typ. 70 dB (f = 100 Hz)
- Ceramic Capacitor Compatible ····················· C1 = 1.0 μF or more, C2 = 4.7 μF or more

APPLICATIONS

- Power source for car accessories including car audio equipment, car navigation system, and ETC system.
- Power source for control units including EV inverter and charge control.

SELECTION GUIDE

The set output voltage and the auto-discharge option*1 are user-selectable options.

Selection Guide

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R1513Sxx1∗-E2-#E	HSOP-6J	1,000 pcs	Yes	Yes

xx: Specify the set output voltage (V_{SET}) from below.

1.2 V (12) / 1.5 V (15) / 1.8 V (18) / 3.3 V (33) / 3.4 V (34) / 5.0 V (50)

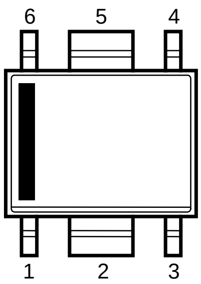
∗: Specify the auto-discharge option.
B: Auto-discharge option not included
D: Auto-discharge option included

#: Specify the automotive class code.

	Operating Temperature Range	Guaranteed Specs Temperature Range	Screening
A	−40°C to 125°C	25°C	High Temperature
K	−40°C to 125°C	−40°C to 125°C	High and Low Temperature

*1 Auto-discharge function quickly lowers the output voltage to 0 V, when the chip enable signal is switched from the active mode to the standby mode, by releasing the electrical charge accumulated in the external capacitor.

PIN DESCRIPTION



HSOP-6J Pin Configuration

HSOP-6J Pin Description

Pin No.	Symbol	Description
1	V_{OUT}	Output Pin
2	GND[*1]	Ground Pin
3	V_{FB}	Feedback Pin
4	CE	Chip Enable Pin, Active-high
5	GND[*1]	Ground Pin
6	V_{DD}	Input Pin

[*1] The GND pins must be wired together when they are mounted on board.

ABSOLUTE MAXIMUM RATINGS

Absolute Maximum Ratings

Symbol	Item		Rating	Unit
V_{IN}	Input Voltage		−0.3 to 50	V
V_{IN}	Peak Input Voltage[*1]		60	V
V_{CE}	CE Pin Input Voltage		−0.3 to 50	V
V_{FB}	V_{FB} Pin Input Voltage		−0.3 to V_{OUT} + 0.3 ≤ 50	V
V_{OUT}	Output Voltage		−0.3 to V_{IN} + 0.3 ≤ 50	V
P_D	Power Dissipation[*2]	Ultra High Wattage Land Pattern	3400	mW
		Standard Land Pattern	2100	
Tj	Junction Temperature		−40 to 150	°C
Tstg	Storage Temperature Range		−55 to 150	°C

[*1] Duration time = 200 ms

[*2] Refer to *PACKAGE INFORMATION* for detailed informatoin.

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause permanent damage and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS

Recommended Operating Conditions

Symbol	Item	Rating	Unit
V_{IN}	Input Voltage	3.5 to 36	V
Ta	Operating Temperature Range	−40 to 125	°C

RECOMMENDED OPERATING CONDITIONS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

ELECTRICAL CHARACTERISTICS

C1 = 1.0 µF, C2 = 4.7 µF, V_{OUT} = $V_{FB,}$ V_{SET} = Set Output Voltage, unless otherwise noted.

The specifications surrounded by ☐ are guaranteed by design engineering at –40°C ≤ Ta ≤ 125°C.

R1513SxxxB/D (-AE) Electrical Characteristics (Ta = 25°C)

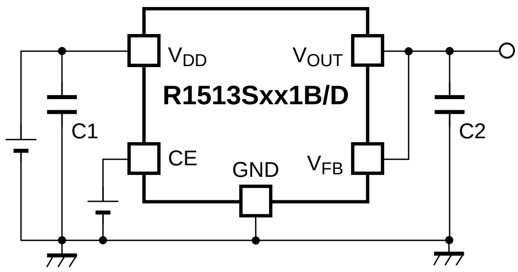
TYPICAL APPLICATION



R1513S Typical Application

External Components List

Symbol	Description
C1	1.0 µF, Ceramic Capacitor
C2	4.7µF, Ceramic Capacitor

TECHNICAL NOTES

Phase Compensation

Phase compensation is provided to secure stable operation even when the load current is varied. For this purpose, use a 4.7 µF or more output capacitor (C2) with good frequency characteristics and proper ESR (Equivalent Series Resistance). Connect a 1.0 µF or more input capacitor (C1) between the V_{DD} pin and the GND pin as close as possible to the pins.
In case of using a tantalum type capacitor with a large ESR, the output might become unstable. Evaluate your circuit including consideration of frequency characteristics.
Depending on the capacitor size, manufacturer, and part number, the bias characteristics and the temperature characteristics vary.

PCB Layout

Ensure the V_{DD} and GND lines are sufficiently robust. If their impedance is too high, noise pickup or unstable operation may result. No. 2 pin and No.5 pin must be wired together when mounting on board. Connect a capacitor with a suitable between the V_{DD} and GND pins, and as close as possible to the pins. The load regulation can be improved by short-circuiting V_{OUT} and V_{FB} close to the load device.

Thermal Shutdown Function

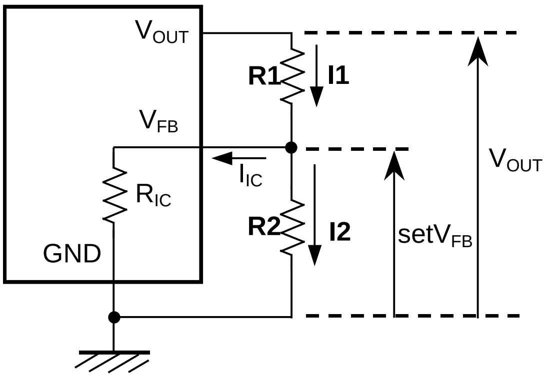
Thermal shutdown function detects overheating of the regulator and stops the regulator operation to protect the device from damage. Thermal shutdown circuit stops the regulator operation if the junction temperature becomes higher than 160°C (Typ.) and restarts the regulator operation if the junction temperature drops below 135°C (Typ.). The regulator repeats turning on and off and creates pulse waveform until the cause of the overheating is removed.

Adjustable Output Voltage Setting

Output voltage can be adjusted by using the external divider resistors (R1, R2). By using the following equation, the output voltage (V_{OUT}) can be determined. The voltage which is fixed inside the IC is described as V_{FB}.

$V_{OUT} = V_{FB} \times ((R1 + R2) / R2)$

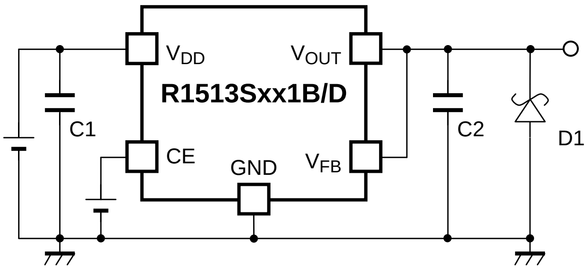
Recommended Output Voltage Range: $1.2\ V \leq V_{OUT} \leq 18\ V$
$V_{FB} = V_{SET}$



Output Voltage Adjustment Using External Divider Resistors (R1, R2)

The minimum resistance value for a resistor (R_{IC}) is 1 MΩ (Ta = 25°C, guaranteed by design). For better accuracy, setting R1 << R_{IC} reduces errors. The resistance value for a resistor (R2) should be set to 33 kΩ or lower. If the resistance values set for R1 and R2 are larger, the impedance of the V_{FB} pin becomes larger.
R_{IC} could be affected by temperature; therefore, evaluate the circuit taking the actual conditions of use into account when deciding the resistance values for R1 and R2.

TYPICAL APPLICATION FOR IC CHIP BREAKDOWN PREVENTION



R1513S Typical Application for IC Chip Breakdown Prevention

When a sudden surge of electrical current travels along the V_{OUT} pin and GND due to a short-circuit, electrical resonance of a circuit involving an output capacitor (C2) and a short circuit inductor generates a negative voltage and may damage the device or the load devices. Connecting a schottky diode (D1) between the V_{OUT} pin and GND has the effect of preventing damage to them.

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to our sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of our company.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under our company's or any third party's intellectual property rights or any other rights.
5. The products in this document are designed for automotive applications. However, when using the products for automotive applications, please make sure to contact our sales representative in advance due to confirming the quality level.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact our sales or our distributor before attempting to use AOI.
11. Please contact our sales representatives should you have any questions or comments concerning the products or the technical information.
