

LTC3774EUHE

4-Phase High Current Step-Down Converter with Very Low DCR Inductor

DESCRIPTION

Demonstration circuit DC2111A features the [LTC[®]3774](#) in a 4-phase, high output current step-down converter with sub-m Ω DCR sensing. This high performance converter operates at a switching frequency of 400kHz over an input voltage range of 10V to 14V. The 5mm \times 5mm DrMOS and 0.33 μ H/0.325m Ω inductor provide high efficiency while supplying 30A per phase. The board comes in two assembly types. The –A assembly provides a 1.2V/90A converter with N+1 MOSFET failure protection and the –B assembly provides a high efficiency 1.2V/120A converter.

1.2V/90A Converter with N+1 MOSFET Failure Protection

The –A assembly is intended for high reliability applications which have a very low tolerance for down-time or which operate in rugged environments. Each phase of the 1.2V/90A converter is protected by its own LTC4226-1 hot swap circuit on the input and an LTC4352 ideal diode on its output. If an internal DrMOS MOSFET fails, then that phase will be isolated from the rest of the circuit and the converter will continue to operate with only a small perturbation on the output and will provide the full rated 90A load. Once a fault is detected, the PWM signal for that phase will be floated. This in turn will signal the DrMOS to pull its TG and BG signals low. Examples of the converter's response to MOSFET failures can be seen in Figure 2 and Figure 3. Further protection is provided by a dedicated 5V bias supply for each phase. If the 5V bias for a given phase is pulled down due to a DrMOS failure or other fault, the 5V bias for the other phases will not be affected.

In case of an overvoltage event, an external overvoltage protection circuit will pull down the output. The LTC3774 does have its own crowbar type overvoltage protection,

but the ideal diodes will prevent the bottom FETs from pulling down the output once an overvoltage is detected. The external OVP comparator will also provide overvoltage protection in case the voltage sense lines are shorted or reversed.

For a 12V input, the –A assembly provides a full load efficiency of 89.3% and a peak efficiency of 90.6% which occurs around 50% load.

1.2V/120A High Efficiency Converter

The –B assembly is a high efficiency 1.2V/120A 4-phase converter. Given that it does not have the MOSFET failure protection and redundancy of the –A assembly, it provides higher efficiency and more output current. For a 12V input it provides a full load efficiency of 90.6% and a peak efficiency of 93.1% which occurs at 55% load.

More Features

Both assembly types provide many features. These include:

- Remote sensing
- CLKIN and CLKOUT pins
- PGOOD, RUN and TRACK/SS pins
- Dynamic load circuit
- Optional phase shedding circuit

The LTC3774 data sheet provide a complete description of the IC operation and application information. The data sheet must be read in conjunction with the quick start guide.

Design files for this circuit board are available at <http://www.linear.com/demo/DC2111A-A-B>

PERFORMANCE SUMMARY

Specifications are at $T_A = 25^\circ\text{C}$

Table 1. A Converter ($T_A = 25^\circ\text{C}$, No Airflow)

PARAMETER	CONDITION	VALUE
Minimum Input Voltage		10V
Maximum Input Voltage		14V
Output Voltage V_{OUT}	$I_{OUT} = 0\text{A to }90\text{A}$, $V_{IN} = 10\text{V to }14\text{V}$	$1.2\text{V} \pm 1.5\%$
$I_{OUT(MAX)}$	$V_{IN} = 10\text{V to }14\text{V}$	90A
Nominal Switching Frequency		400kHz
Efficiency, See Figure 6	$V_{OUT} = 1.2\text{V}$, $I_{OUT} = 90\text{A}$, $V_{IN} = 12\text{V}$	89.3% Typical

Table 2. B Converter ($T_A = 25^\circ\text{C}$, No Airflow)

PARAMETER	CONDITION	VALUE
Minimum Input Voltage		10V
Maximum Input Voltage		14V
Output Voltage V_{OUT}	$I_{OUT} = 0\text{A to }120\text{A}$, $V_{IN} = 10\text{V to }14\text{V}$	$1.2\text{V} \pm 1.5\%$
$I_{OUT(MAX)}$	$V_{IN} = 10\text{V to }14\text{V}$	120A
Nominal Switching Frequency		400kHz
Efficiency, See Figure 7	$V_{OUT} = 1.2\text{V}$, $I_{OUT} = 120\text{A}$, $V_{IN} = 12\text{V}$	90.6% Typical

QUICK START PROCEDURE

The evaluation setup for demonstration circuit 2111A is shown in Figure 1. To test the board, follow the procedure below:

- 1) With power off, connect the input supply, load and meters as shown in the setup drawings. Preset the load to 0A and V_{IN} supply to be 0V.
- 2) Place the jumpers in the following positions:

JP1	RUN	ON	
JP2	MODE	CCM	
JP5	IDEAL DIODE MODE	DIODE	A ONLY

- 3) Set the input voltage to 12V.
- 4) Check the output voltage. The output voltage should be within the regulation limits shown in the Performance Summary table.
- 5) Next, apply full load and re-measure V_{OUT} . Check the output voltage again to make sure it is within the regulation limits.
- 6) Adjust the input voltage and load current to the desired levels within their limits and observe the regulation, output ripple, load step response, efficiency and other parameters.

Note 1. To monitor the output voltage ripple, use the BNC connectors labeled V_{OUT} .

Note 2. Do not connect load between the $VOS+$ and $VOS-$ turrets. This could damage the converter. Only apply load across the $VOUT+$ and $VOUT-$ stud connectors on the edge of the board.

Note 3. For loads less than 5A, some low level noise may appear on the output of the –A assembly. This is due to the normal operation of the ideal diodes and the slight current sharing discrepancy between the phases. To avoid this, place the DIODE jumper in the REV I ALLOWED setting. This will allow reverse current to flow through the diodes for clean output voltage ripple. However, the output will not be protected from faults which short the switch node to ground.

Dynamic Load Circuit (Optional)

Demonstration circuit 2111A provides a simple dynamic load circuit consisting of a MOSFET and sense resistor. To use the circuit, follow the steps below:

1. Connect the output of the pulse generator between PULSE GEN and GND.
2. Connect the BNC labeled LOAD STEP to an oscilloscope.
3. Connect the BNC labeled V_{OUT} to an oscilloscope.
4. Preset the amplitude of a pulse generator to 0V and the duty cycle to 5% or less.
5. With the converter running, slowly increase the amplitude of the pulse generator output to provide the desired load step pulse height. The scaling for the load step signal is 2mV/A.

 -A N+1 MOSFET FAILURE PROTECTION 90A
 -B HIGH EFFICIENCY CONVERTER 120A

NOTE: UNLESS OTHERWISE SPECIFIED
 1. ALL RESISTORS ARE IN OHMS, 0603.
 2. ALL CAPACITORS ARE 0603.

DEMO MANUAL

DC2111A-A/-B

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
