Description

The RFD15P05, RFD15P05SM and RFP15P05 p-channel power MOSFETs are manufactured using the MegaFET process. This process, which uses feature sizes approaching those of LSI integrated circuits, gives optimum utilization of silicon, resulting in outstanding performance. They were designed for use in applications such as switching regulators, switching converters, motor drivers, relay drivers, and emitter switches for bipolar transistors. These transistors can be operated directly from integrated circuits.

The RFD15P05 is supplied in the JEDEC TO-251AA plastic package and the RFD15P05SM in the TO-252AA plastic package. The RFP15P05 is supplied in the JEDEC TO-220AB plastic package.
