Notes:

①The current in the application is limited by T_{JMax} and the thermal properties of the assembly.
②V_{CC} = 80% (V_{CES}), V_{GE} = 20V, L = 200µH, R_G = 10Ω.
③Refer to AN-1086 for guidelines for measuring $V_{(BR)CES}$ safely

⑤Values influenced by parasitic L and C in measurement

Additional Testing and Screening
For Customers requiring product supplied as Known Good Die (KGD) or requiring specific die level testing, please contact your local IR Sales.

Shipping

Sawn Wafer on Film. Please contact your local IR sales office for non– standard shipping options

Handling

- Product must be handled only at ESD safe workstations. Standard ESD precautions and safe work environments are as defined in MIL-HDBK-263.
- Product must be handled only in a class 10,000 or better-designated clean room environment.
- Singulated die are not to be handled with tweezers. A vacuum wand with a non-metallic ESD protected tip should be used.

Wafer/Die Storage

- Proper storage conditions are necessary to prevent product contamination and/or degradation after shipment.
- Note: To reduce the risk of contamination or degradation, it is recommended that product not being used in the assembly process be returned to their original containers and resealed with a vacuum seal process.
- Sawn wafers on a film frame are intended for immediate use and have a limited shelf life.
