The compact IE-MiniFiberLinX-II and IE-MiniFiberLinX-II with LastGasp/Telco is one of the most versatile fiber optic NID devices available on the market today.

As a copper-to-fiber converter, the IE-MiniFiberLinX-II series (including LastGasp / Telco) supports multiple fiber types including multimode, single-mode, and single-strand fiber to increase the capacity of existing fiber. As a remote, CPE device, it can be connected via the fiber segment to an iMcV-FiberLinX-II Host module to support Host/Remote management.

It provides point-to-point fiber optic connections with a unique management tool to monitor the entire link between two locations. Both models are designed to work with -48 VDC power that is compliant with the Bellcore GR-499 specification, supporting the minimum and maximum transient voltages, typically required by transport equipment used in Telco environments. Additionally, one model offers Last Gasp, a Trap notification feature that identifies when the power lines are down or of a possible power supply failure. Other key features include; carrier grade remote SNMP management, extra tagging using Q-in-Q, and PoE (Power over Ethernet, on non-Telco version only).

Equipped with one 100 Mbps fiber data port, one 10/100 twisted pair port for data and management, as well as an auxiliary port designed to function as a serial port (when used with the included adapter), the IE-MiniFiberLinX-II/LastGasp also offers multiple powering options: AC power (with included adapter), DC (through a 4-terminal power block).
