IO-Link® Process Out Data

IO-Link is a point-to-point communication link between a master device and a sensor and/or light. It can be used to automatically parameterize sensors or lights and to transmit and/or receive process data. For the latest IO-Link protocol and specifications, please visit www.io-link.com. For the latest IODD files, please refer to the Banner Engineering Corp website at: www.bannerengineering.com.

Process Data is transmitted cyclically to the IO-Link device from the IO-Link master. These parameters are written to the K50 acyclically and are used to perform the following functions:

- Indicator light on and off
- Audible on and off (audible models only)
- Full color control of indicator light (defined colors and ability to create custom colors)
- Full flashing control of indicator light (defined flashing rates and ability to create custom rates)
- Full dimming control of indicator light (defined intensities and ability to create custom intensities)
- Various animation control and configurability
 - Flashing: flash light at defined flash rate (50/50 duty cycle)
 - Two-Color Flashing: flash two colors at defined flash rate, alternating (50/50 duty cycle)
 - Strobe: strobe light at defined flash rate (80/20 duty cycle)
 - Half/Half: show half one color and half another color
 - Half/Half Rotate: animation that shows half one color and half another color while rotating clockwise or counter-clockwise
 - Chase: animation that shows a single spot in one color against a background of another color while rotating clockwise or counter-clockwise
 - Demo Mode: cycles through defined colors and then through color spectrum

Note: Additional color shades can be made by adjusting intensity
