FP2/FP2SH

Machine Cybernation
High Speed & High Capacity

Compact body loaded with functions equivalent to a medium-scale PLC

Superior cost performance, and ideal for built-in use

FP2/FP2SH is a compact PLC series (W 140 x H 100 x D 110 mm W5.512 x H3.937 x D4.331 inch when using five modules) loaded with multiple functions, achieving superior cost performance. The CPU units have an RS232C port as standard equipment, which allows for communications with external equipment, such as a computer or a display panel, and advanced "communications" for remote monitoring and remote maintenance via a modem. Furthermore, the new intelligent units support wider applications, including full-scale "motor (positioning) control", "analog control", and "networking". This series is perfect as built-in controllers for a variety of systems and equipment.

CPU units

Selectable from six types, including intelligent types, according to the application

There are six types of CPU units, including the standard type and the intelligent type with preinstalled commonly-used advanced functions. This selection allows for more economical system development according to the application. * See page 10 for details.

Body size

The front face is smaller
than an A6 sheet of paper.

The front face area is 140 mm 5.512 inch wide and 100 mm 3.937 inch high (when using five modules), which is small enough to fit completely on an A6 sheet of paper. The compact body requires minimum installation space.

* Depth: 108.3 mm 4.264 inch

Memory and I/O control

Equipped with an adequate program memory and operating memory capacity

The body is compact; however, the capacity of the standard program memory of FP2/FP2SH is as large as 16 k/60 k steps, and, when optional memory is added, 32 k/120 k steps. A variety of operation memory types are also available. The maximum number of controlled I/O points is 2,048 (2,048/8,192 for FP2/FP2SH when using remote I/O units), which is sufficient for medium-scale control.

Addition of optional memory

FP2: Addition of optional memory to the CPU unit allows it to store up to 32 k program steps, provides it with the clock/calendar function, and makes comment writing possible.

FP2SH: An optional IC card can be used as program memory or expanded data memory.

Unit combinations

- Each unit is counted in the number of modules occupied. Most of the units occupy one module each. Some units occupy two modules each.
- Each unit is mounted on a backplane chosen depending on the total number of modules occupied by the all units used.
The power supply unit and CPU unit must be mounted on the CPU backplane.
- Only one backplane other than the five-module type can be added by using an expansion cable. A power supply must be mounted on the expansion backplane.
- If the backplane is of the H type, up to three backplanes can be added.
- Most of the units can be used in any combination; however, some combinations are subject to constraints due to the unit type, current consumption, and other factors besides the above requirements.
