

Radiation Hardened, High Reliability, CMOS/SOS 4096 Word by 1-Bit LSI Static RAM

November 1995

Features

- Radiation Hardened to 10K RAD (Si)
- SEP Effective LET No Upsets: $>100 \text{ MEV-cm}^2/\text{mg}$
- Single Event Upset (SEU) Immunity $< 2 \times 10^{-9}$ Errors/Bit-Day (Typ)
- Dose Rate Survivability: $>1 \times 10^{12}$ RAD (Si)/s
- Dose Rate Upset $>10^{10}$ RAD (Si)/s 20ns Pulse
- Latch-Up Free Under Any Conditions
- Fully Static Operation
- Single Power Supply 4.5V to 6.5V
- All Inputs and Outputs TTL Compatible
- Three-State Outputs
- Industry Standard 18 Pin Configuration
- Fast Access Time tAVQV = 200ns
- Low Standby and Operating Power

Description

The CMM5104 is a high reliability 4096 word by 1-bit static random access memory using CMOS/SOS technology. It is designed for use in memory systems where low power and simplicity in use are desirable.

CMOS/SOS technology permits operation in radiation environments. It is insensitive to neutrons, cannot latch up at any dose rate and is resistant to single event upset caused by cosmic rays or heavy ions.

TTL compatibility on all input and output terminals permits easy system integration. The data out signal has the same polarity as the input data. A separate data input and a separate Three-state output are used.

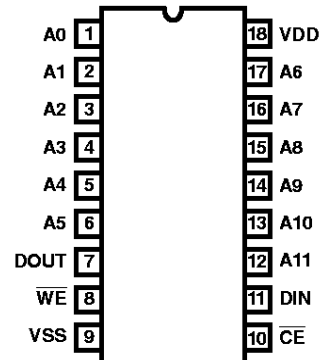

The CMM5104 is supplied in 18 lead dual-in-line sidebraced ceramic package (D suffix). The part is also available in a 24 lead flatpack ceramic package (K suffix).

Absolute Maximum Ratings

Supply Voltage (VDD),
 All voltage values referenced to VSS terminal -0.5V to +7.0V
 Input Voltage Range, All Inputs -0.5 to VDD +0.5V
 Input Current, Any One Input ±10mA
 Storage Temperature Range -65°C to +150°C
 Lead Temperature (Soldering 10s) +265°C
 Typical Derating Factor 3.0mA/MHz Increase in IDDOP
 ESD Classification Class 1

Reliability Information

Thermal Resistance θ_{JA} θ_{JC}
 SBDIP Package 78°C/W 18°C/W
 Ceramic Flatpack Package 80°C/W 20°C/W
 Maximum Package Power Dissipation at +125°C Ambient
 SBDIP Package 0.64W
 Ceramic Flatpack Package 0.63W
 If device power exceeds package dissipation capability, provide heat sinking or derate linearly at the following rate:
 SBDIP Package 12.8mW/°C
 Ceramic Flatpack Package 12.5mW/°C
 Gate Count 5400 Gates

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

Operating Conditions

Operating Voltage Range +4.5V to +6.5V Input High Voltage VDD/2 to VDD
 Operating Temperature Range -55°C to +125°C Data Retention Supply Voltage 2.5V
 Input Low Voltage 0V to +0.8V

Optional Interim Electrical Test (T0) (Only if the high temper- ature stress test was performed.) 10% PDA (Note 1)	

NOTES:

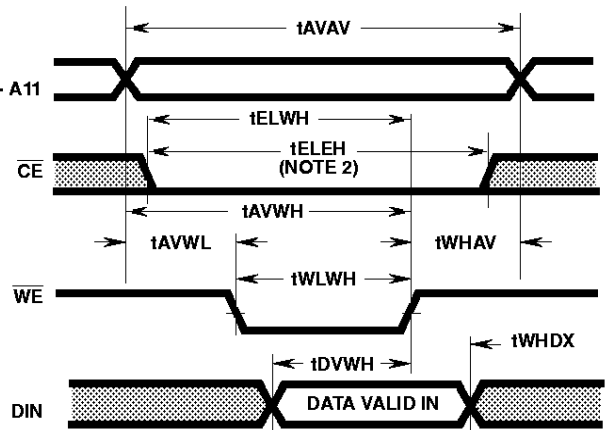

1. If the optional 48-hour Stress Test is not utilized, then the initial test is used for T0 reference when calculating deltas.
2. Failures from Interim Electrical Tests T1 and T2 are combined for determining PDA.
3. Failures from subgroups 1, 7, and deltas are used for calculating PDA. The maximum allowable PDA is 5% with no more than 3% from subgroup 7.
4. Radiographic (X-Ray) inspection may be performed at any point after serialization as allowed by Method 5004. Per Method 5004.
5. Alternate Group A testing may be performed as allowed by MIL-STD-883, Method 5005.
6. Data Package Contents:
 - Cover Sheet (Harris Name and/or Logo, P.O. Number, Customer Part Number, Lot Date Code, Harris Part Number, Lot Number, Quantity).
 - Wafer Lot Acceptance Report (Method 5007). Includes reproductions of SEM photos with percent of step coverage.
 - GAMMA Radiation Report. Contains Cover page, disposition, RAD Dose, Lot Number, Test Package used, Specification Numbers, Test equipment, etc. Radiation Read and Record data on file at Harris.
 - X-Ray report and film. Includes penetrometer measurements.
 - Screening, Electrical, and Group A attributes (Screening attributes begin after package seal).
 - Lot Serial Number Sheet (Good units serial number and lot number).
 - Variables Data (All Delta operations). Data is identified by serial number. Data header includes lot number and date of test.
 - The Certificate of Conformance is a part of the shipping invoice and is not part of the Data Book. The Certificate of Conformance is signed by an authorized Quality Representative.
