

## VNB49N04 - VNV49N04

OMNIFET:  
fully autoprotected Power MOSFET

### Features

Type	V <sub>CLAMP</sub>	R <sub>DS(ON)</sub>	I <sub>LIM</sub>
VNB49N04	42 V	20 mΩ	49 A
VNV49N04			

- Linear current limitation
- Thermal shutdown
- Short circuit protection
- Integrated clamp
- Low current drawn from input pin
- Diagnostic feedback through input pin
- ESD protection
- Direct access to the gate of the Power MOSFET (analog driving)
- Compatible with standard Power MOSFET

### Description

The VNB49N04, VNV49N04 are monolithic devices designed in STMicroelectronics™ VIPower™ M0 technology, intended for replacement of standard Power MOSFETs from DC up to 50 KHz applications.

Built-in thermal shutdown, linear current limitation and overvoltage clamp protect the chip in harsh environments.

Fault feedback can be detected by monitoring the voltage at the input pin.

## 2 Electrical specifications

### 2.1 Absolute maximum rating

Stressing the device above the rating listed in the “Absolute maximum ratings” table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to the conditions in table below for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality document.

**Table 2. Absolute maximum rating**

Symbol	Parameter	Value	Unit
$V_{DS}$	Drain-source voltage ( $V_{IN} = 0\text{ V}$ )	Internally clamped	V
$V_{IN}$	Input voltage	18	V
$I_D$	Drain current	Internally limited	A
$I_R$	Reverse DC output current	-50	A
$V_{ESD}$	Electrostatic discharge ( $R = 1.5\text{ K}\Omega$ , $C = 100\text{ pF}$ )	2000	V
$P_{tot}$	Total dissipation at $T_C = 25\text{ }^\circ\text{C}$	125	W
$T_j$	Operating junction temperature	Internally limited	$^\circ\text{C}$
$T_C$	Case operating temperature	Internally limited	$^\circ\text{C}$
$T_{stg}$	Storage temperature	-55 to 150	$^\circ\text{C}$

### 3 Protection features

During normal operation, the INPUT pin is electrically connected to the gate of the internal power MOSFET. The device then behaves like a standard power MOSFET and can be used as a switch from DC up to 50 KHz. The only difference

from the user's standpoint is that a small DC current (I<sub>ISS</sub>) flows into the INPUT pin in order to supply the internal circuitry.

The device integrates:

- **Overvoltage clamp protection:**  
Internally set at 42V, along with the rugged avalanche characteristics of the Power MOSFET stage give this device unrivalled ruggedness and energy handling capability. This feature is mainly important when driving inductive loads.
- **Linear current limiter circuit:**  
Limits the drain current I<sub>D</sub> to I<sub>LIM</sub> whatever the INPUT pin voltage. When the current limiter is active, the device operates in the linear region, so power dissipation may exceed the capability of the heatsink. Both case and junction temperatures increase, and if this phase lasts long enough, junction temperature may reach the overtemperature threshold T<sub>jsh</sub>.
- **Overtemperature and short circuit protection:**  
These are based on sensing the chip temperature and are not dependent on the input voltage. The location of the sensing element on the chip in the power stage area ensures fast, accurate detection of the junction temperature. Overtemperature cutout occurs at minimum 150 °C. The device is automatically restarted when the chip temperature falls below 135 °C.
- **Status feedback:**  
In the case of an overtemperature fault condition, a status feedback is provided through the INPUT pin. The internal protection circuit disconnects the input from the gate and connects it instead to ground via an equivalent resistance of 100Ω. The failure can be detected by monitoring the voltage at the INPUT pin, which will be close to ground potential. Additional features of this device are ESD protection according to the Human Body model and the ability to be driven from a TTL Logic circuit (with a small increase in R<sub>DS(ON)</sub>).
