DESCRIPTION

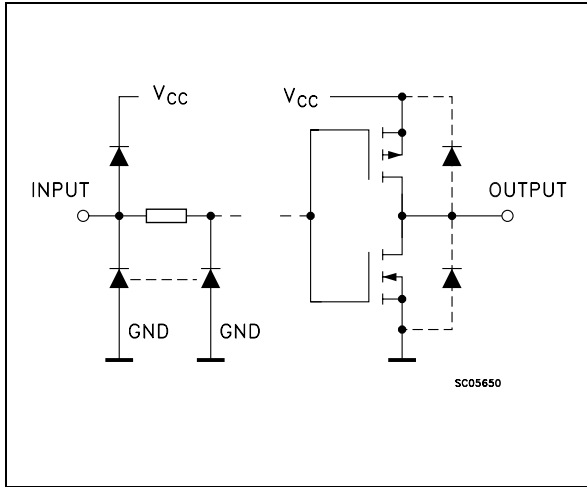

The M74HC597 is an high speed CMOS 8 BIT PIPO SHIFT REGISTER fabricated with silicon gate C²MOS technology. This devices comes in a 16-pin package and consist of an 8-bit storage latch feeding a parallel in, serial out 8-bit shift register. Both the storage

register and shift register have positive edge triggered clocks. The shift register also has direct load (from storage) and clear inputs. All inputs are equipped with protection circuits against static discharge and transient excess voltage.

1) C_{PD} is defined as the value of the IC's internal equivalent capacitance which is calculated from the operating current consumption without load. (Refer to Test Circuit). Average operating current can be obtained by the following equation. $I_{CC(oper)} = C_{PD} \times V_{CC} \times f_{IN} + I_{CC}$
