

8-line IPAD™ low capacitance EMI filter and ESD protection in QFN package

QFN 16L 3.3 mm x 1.5 mm
(bottom view)

Features

- EMI symmetrical (I/O) low-pass filter
- High efficiency in EMI filtering:
 - Greater than -34 dB attenuation at frequencies from 900 MHz to 1.8 GHz
- Cut-off frequency: 100 MHz
- Very low PCB space consuming: 3.3 mm x 1.5 mm
- Very thin package: 0.6 mm max.
- High reliability offered by monolithic integration
- RoHS package
- Complies with following standards:
 - IEC 61000-4-2 level 4 input and output pins
 - 15 kV (air discharge)
 - 8 kV (contact discharge)
 - MIL STD 883G - Method 3015-7 Class 3B (all pins)
- UL94 V0

Applications

Where EMI filtering in ESD sensitive equipment is required:

- LCD and camera for mobile phones
- Computers and printers
- Communication systems
- MCU boards

Product status

EMIF08-1005M16

Description

The EMIF08-1005M16 is an 8-line, highly integrated device designed to suppress EMI/RFI noise in all systems exposed to electromagnetic interference.

This filter includes an ESD protection circuitry, which prevents damage to the application when subjected to ESD surges up to 15 kV on the input or output pins.

1 Characteristics

Figure 1. Pin configuration

Table 1. Absolute maximum ratings ($T_{amb} = 25\text{ }^{\circ}\text{C}$)

Symbol	Parameter	Value	Unit
V_{PP}	ESD IEC 61000-4-2, air discharge	15	kV
	ESD IEC 61000-4-2 contact discharge	15	
T_j	Maximum junction temperature range	-40 to +125	$^{\circ}\text{C}$
T_{stg}	Storage temperature range	-55 to +150	$^{\circ}\text{C}$

Figure 2. Electrical characteristics (definitions)

Symbol	Parameter
V_{BR}	Breakdown voltage
I_{RM}	Leakage current at V_{RM}
V_{RM}	Stand-off voltage
V_{CL}	Clamping voltage
R_d	Dynamic resistance
I_{PP}	Peak pulse current
$R_{I/O}$	Series resistance between Input and Output
C_{line}	Input capacitance per line

Table 2. Electrical characteristics ($T_{amb} = 25\text{ }^{\circ}\text{C}$)

Symbol	Test conditions	Min.	Typ.	Max.	Unit
V_{BR}	$I_R = 1\text{ mA}$	6	8	10	v
V_F	$I_F = 10\text{ mA}$	0.5	1.0	1.5	v
I_{RM}	$V_{RM} = 3\text{ V per line}$			200	nA
$R_{I/O}$	Tolerance $\pm 10\%$	90	100	110	Ω
C_{line}	$V_{LINE} = 0\text{ V dc}$, $V_{OSC} = 30\text{ mV}$, $F = 1\text{ MHz}$	38	45	52	pF

2 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: www.st.com. ECOPACK® is an ST trademark.

Figure 10. Marking

Dot: Pin 1 Identification
XX = Marking
WW = DataCode (week)
Y = Data code (Year)
P = Assembly plant

Figure 11. Tape and reel outline

Product marking may be rotated by 90° for assembly plant differentiation. In no case should this product marking be used to orient the component for its placement on a PCB. Only pin 1 mark is to be used for this purpose.

3 Recommendation on PCB assembly

3.1 Stencil opening design

1. General recommendation on stencil opening design
 - a. Stencil opening dimensions: L (Length), W (Width), T (Thickness).
2. General design rule
 - a. Stencil thickness (T) = 75 ~ 125 μm
 - b. Aspect ratio = $\frac{W}{T} \geq 1.5$
 - c. Aspect area = $\frac{L \times W}{2T(L + W)} \geq 0.66$
3. Reference design
 - a. Stencil opening thickness: 100 μm
 - b. Stencil opening for leads: Opening to footprint ratio is 90%.

Figure 12. Recommended stencil window position

Figure 13. Recommended stencil opening dimensions

3.2 Solder paste

1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
2. “No clean” solder paste is recommended.
3. Offers a high tack force to resist component movement during high speed.
4. Solder paste with fine particles: powder particle size is 20–45 μm .

3.3 Placement

1. Manual positioning is not recommended.
2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
3. Standard tolerance of ± 0.05 mm is recommended.
4. 3.5 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

3.4 PCB design preference

1. To control the solder paste amount, the closed via is recommended instead of open vias.
2. The position of tracks and open vias in the solder area should be well balanced. A symmetrical layout is recommended, to avoid any tilt phenomena caused by asymmetrical solder paste due to solder flow away.

3.5 Reflow profile

Figure 14. ST ECOPACK® recommended soldering reflow profile for PCB mounting

Note: Minimize air convection currents in the reflow oven to avoid component movement. Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.

4 Ordering information

Table 4. Ordering information

Part number	Marking	Package	Weight	Base qty.	Delivery mode
EMIF08-1005M16	H8 ⁽¹⁾	QFN	7.9 mg	3000	Tape and reel (7")

1. The marking can be rotated by 90° to differentiate assembly location

Revision history

Table 5. Document revision history

Date	Version	Changes
24-Oct-2006	1	Initial release.
04-Feb-2008	2	Reformatted to current standards. Updated ECOPACK statement. Added Section 4: Recommendation on PCB assembly.
08-Feb-2018	3	Updated Table 1. Absolute maximum ratings ($T_{amb} = 25\text{ °C}$).

IMPORTANT NOTICE – PLEASE READ CAREFULLY

STMicroelectronics NV and its subsidiaries (“ST”) reserve the right to make changes, corrections, enhancements, modifications, and improvements to ST products and/or to this document at any time without notice. Purchasers should obtain the latest relevant information on ST products before placing orders.
