

- ⚙ Ruggedized header with POGO pins for secure board mounting
- ⚙ Current Rating: up to 23.8ADC
- ⚙ Frequency Range: up to 1MHz
- ⚙ Moisture Sensitivity Level: 3

**NOTES:**

- Reference values are for an inductor with a 55°C temperature rise. The core loss is 10% of the copper loss at the ET listed and 500kHz.
- Core does not saturate abruptly. The ET and DC current are limited by the desired inductance and temperature rise.
- In high volt-time applications, additional heating in the component can occur due to core losses in the inductor which may necessitate derating the current in order to limit the temperature rise of the component. In order to determine the approximate total losses (or temperature rise) for a given application, both copper and core losses should be taken into account.

Estimated Temperature Rise:

$$T_{rise} = K3 * (CoreLoss(W) + CopperLoss(W))^{.833} (C)$$

$$CopperLoss = I_{rms}^2 * DCR_{Typical} (m^1) / 1000$$

$$CoreLoss = K2 * (Freq\_kHz)^{1.26} * (\bar{A}B)^{2.71}$$

$$\bar{A}B = K1 * Volt\text{-}\mu sec * 100$$

- Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. PL8400 becomes **PL8400T**).
