Aluminum Extrusion Oval T-Nut for 20x20 – M4 Thread – pack of 50

PRODUCT ID: 1158

DESCRIPTION

An essential for working with slotted aluminum extrusion, these slim metal nuts slide into the ends of the extrusion. The oval shape means that as they are screwed into the nut they jam against the slot. This is for our 20x20mm slotted extrusion, not "OpenBeam" 15x15mm

This product comes as a bag of 50 T-nuts, with M4 threads. If you want to be a little more lux, check out our "slim" T-nuts that can be dropped into the slot from the side rather than from the end. Works with any of our M4 screws.
