

## PCI-EXPRESS GEN 2 DUAL OUTPUT CLOCK GENERATOR

### Features

- PCI-Express Gen 1 and Gen 2 compliant
- Low power HCSL differential output buffers
- Supports Serial-ATA (SATA) at 100 MHz
- No termination resistors required
- 25 MHz Crystal Input or Clock input
- Triangular spread spectrum profile for maximum EMI reduction (Si52112-B4)
- Extended Temperature: -40 to 85 °C
- 3.3 V Power supply
- Small package 10-pin TDFN (3x3 mm)
- Si52112-B3 does not support spread spectrum outputs
- Si52112-B4 supports 0.5% down spread outputs
- For PCIe Gen3 applications, see Si52112-B5/B6

### Applications

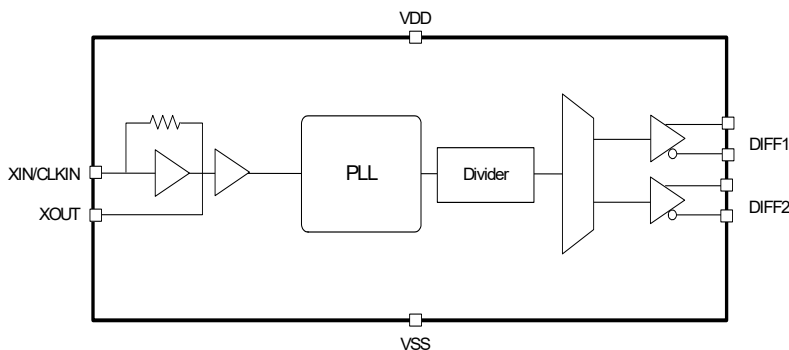

- Network Attached Storage
- Multi-function Printer
- Wireless Access Point
- Routers

### Description

Si52112-B3/B4 is a high-performance, PCIe clock generator that can source two PCIe clocks from a 25 MHz crystal or clock input. The clock outputs are compliant to PCIe Gen 1 and Gen 2 specifications. The ultra-small footprint (3x3 mm) and industry leading low power consumption make Si52112-B3/B4 the ideal clock solution for consumer and embedded applications.

**Table 5. Absolute Maximum Conditions**

| Parameter                         | Symbol         | Test Condition         | Min  | Typ | Max | Unit     |
|-----------------------------------|----------------|------------------------|------|-----|-----|----------|
| Main Supply Voltage               | $V_{DD\_3.3V}$ |                        | —    | —   | 4.6 | V        |
| Input Voltage                     | $V_{IN}$       | Relative to $V_{SS}$   | -0.5 | —   | 4.6 | $V_{DC}$ |
| ESD Protection (Human Body Model) | $ESD_{HBM}$    | JEDEC (JESD 22 - A114) | 2000 | —   | —   | V        |
| Flammability Rating               | UL-94          | UL (Class)             | V-0  |     |     |          |

**Note:** While using multiple power supplies, the voltage on any input or I/O pin cannot exceed the power pin during power-up. Power supply sequencing is not required.

## 2. Crystal Recommendations

If using a crystal input, the device requires a parallel resonance crystal.

**Table 6. Crystal Recommendations**

| Frequency (Fund) | Cut | Loading  | Load Cap | ESR          | Drive        | Shunt Cap (max) | Motional (max) | Tolerance (max) | Stability (max) | Aging (max) |
|------------------|-----|----------|----------|--------------|--------------|-----------------|----------------|-----------------|-----------------|-------------|
| 25 MHz           | AT  | Parallel | 12–15 pF | <50 $\Omega$ | >150 $\mu$ W | 5 pF            | 0.016 pF       | 35 ppm          | 30 ppm          | 5 ppm       |

### 2.1. Crystal Loading

Crystal loading is critical in achieving low ppm performance. To realize low ppm performance, use the total capacitance the crystal sees to calculate the appropriate capacitive loading ( $C_L$ ).

Figure 1 shows a typical crystal configuration using two trim capacitors. It is important that the trim capacitors are in series with the crystal.

**Figure 1. Crystal Capacitive Clarification**

## 2.2. Calculating Load Capacitors

In addition to the standard external trim capacitors, consider the trace capacitance and pin capacitance to calculate the crystal loading correctly. Again, the capacitance on each side is in series with the crystal. The total capacitance on both sides is twice the specified crystal load capacitance ( $C_L$ ). Trim capacitors are calculated to provide equal capacitive loading on both sides.

**Figure 2. Crystal Loading Example**

Use the following formulas to calculate the trim capacitor values for  $C_{e1}$  and  $C_{e2}$ .

### Load Capacitance (each side)

$$C_e = 2 \times C_L - (C_s + C_i)$$

### Total Capacitance (as seen by the crystal)

$$C_{Le} = \frac{1}{\left( \frac{1}{C_{e1} + C_{s1} + C_{i1}} + \frac{1}{C_{e2} + C_{s2} + C_{i2}} \right)}$$

- $C_L$ : Crystal load capacitance
- $C_{Le}$ : Actual loading seen by crystal using standard value trim capacitors
- $C_e$ : External trim capacitors
- $C_s$ : Stray capacitance (terraced)
- $C_i$ : Internal capacitance (lead frame, bond wires, etc.)

### 3. Test and Measurement Setup

Figures 3 through 5 show the test load configuration for the differential clock signals.

**Figure 3. 0.7 V Differential Load Configuration**

**Figure 4. Differential Measurement for Differential Output Signals (for AC Parameters Measurement)**

**Figure 5. Single-ended Measurement for Differential Output Signals (for AC Parameters Measurement)**

## 6.2. TSSOP Package

Figure 10 illustrates the package details for the 8-pin TSSOP. Table 10 lists the values for the dimensions shown in the illustration.

**Figure 10. 8-Pin TSSOP Package Drawing**

Table 10. TSSOP Package Diagram Dimensions

| Symbol   | Min      | Nom  | Max  |
|--|----------|------|------|
| A  | —        | —    | 1.20 |
| A1   | 0.05     | —    | 0.15 |
| A2   | 0.80     | 0.90 | 1.05 |
| b  | 0.19     | —    | 0.30 |
| c  | 0.09     | —    | 0.20 |
| D  | 2.90     | 3.00 | 3.10 |

## 7. Recommended Design Guideline

**Note:** FB Specifications:  
DC resistance 0.1–0.3  $\Omega$   
Impedance at 100 MHz  $\geq 1000 \Omega$
