GENERAL DESCRIPTION

The 53/63S281/A are 256x8 bipolar PROMs featuring low input current PNP inputs, full Schottky clamping, and three-state outputs. The titanium-tungsten fuses store a logical low and are programmed to the high state. Special on-chip circuitry and extra fuses provide preprogramming testing which assures high programming yields and high reliability.

The 63 series is specified for operation over the commercial temperature and voltage range. The 53 series is specified for the military ranges.

PROGRAMMING

The 53/63S281/A PROMs are programmed with the same programming algorithm as all other Advanced Micro Devices generic TiW PROMs. For details contact the factory.

ABSOLUTE MAXIMUM RATINGS

	Operating	Programming
Supply voltage V_{CC}	–0.5 V to 7 V	12 V
Input voltage	–1.5 V to 7 V	7 V
Input current	–30 mA to +5 mA	
Off-state output voltage	–0.5 V to 5.5 V	12 V
Storage temperature	–65°C to +150°C	

Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to Absolute Maximum Rating conditions for extended periods of time may affect reliability. Absolute Maximum Ratings are for system design reference; parameters given are not tested.
