

GaAs MMIC VOLTAGE - VARIABLE ATTENUATOR, 10 - 40 GHz

Typical Applications

The HMC985ALP4KE is ideal for:

- Point-to-Point Radio
- VSAT Radio
- Test Instrumentation
- Microwave Sensors
- Military, ECM & Radar

Features

- Wide Bandwidth: 10 - 40 GHz
- Excellent Linearity: +32 dB Input IP3
- Wide Attenuation Range: 35 dB
- No External Matching
- 24 Lead 4x4 mm SMT Package: 16 mm²

General Description

The HMC985ALP4KE is an absorptive Voltage Variable Attenuator (VVA) which operates from 10 - 40 GHz and is ideal in designs where an analog DC control signal must be used to control RF signal levels over a 35 dB dynamic range. It features two shunt-type attenuators which are controlled by two analog voltages, Vctl1 and Vctl2. Optimum linearity performance of the attenuator is achieved by first varying Vctl1 of the first attenuation stage from -5V to 0V with Vctl2 fixed at -5V. The control voltage of the second attenuation stage, Vctl2, should then be varied from -5V to 0V with Vctl1 fixed at 0V.

If the Vctl1 and Vctl2 pins are connected together it is possible to achieve the full analog attenuation range with only a small degradation in input IP3 performance. Applications include AGC circuits and temperature compensation of multiple gain stages in microwave point-to-point and VSAT radios.

Electrical Specifications, $T_A = +25^\circ\text{C}$, Test Condition $V_{ctl1} = V_{ctl2}$

Pin Descriptions

Pin Number	Function	Description	Pin Schematic
1, 2, 4-7, 12-15, 17-19, 24	GND	These pins and package bottom must be connected to RF/DC ground externally.	
3	RFIN	This pad is DC coupled and matched to 50 Ohms.	
8	Vctl1	Control Voltage 1.	
9, 11, 20-23	NC	These pins are not connected internally, however all data shown herein was measured with these pins connected to RF/DC ground externally.	
10	Vctl2	Control Voltage 2.	
16	RFOUT	This pad is DC coupled and matched to 50 Ohms.

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Analog Devices upon request.
