Network Communication Adapters

DeviceNet Option Unit mounts to a W-Series AC Servo drives and performs both DeviceNet communications functions and Position Control Unit functions. Parameters can be set, the operating status can be monitored, and faults can be predicted from a PLC up to 500 m away.

- **Trace Function:** When trigger conditions are satisfied, up to two analog elements and two ON/OFF elements can be recorded in the DeviceNet Option Unit and read from the PLC.
- **Monitor Item Reading Function:** The contents of AC Servo drive monitor display can be read from the PLC.
- **Batch Handling of Operating Information** for Servo Systems Information that can be displayed at W-series AC Servo Drivers using monitor functions (e.g., speed commands and speed feedback) can be read by a PLC using remote I/O functions.

Cost-Effective Servo Capability with Stepper Simplicity

Easily migrate from steppers to the higher precision of servos in minutes with Omron's SmartStep servo drivers and ultra-compact 3-phase servo motors. They accept pulse-train input that can be configured quickly via simple DIP switches and have an on-line auto-tuning function. SmartStep offers all the simplicity and cost-effectiveness of a stepper with the added advantages of the servo drive capability.

Motor Features

- Sizes 30 W to 750 W, rated speed 3,000 rpm
- Accepts incremental encoder input at 2,000 p/r
- Cylindrical and flat type servo motors available
- Peak torque up to three times continuous torque during 3 seconds
- Easy to install with pre-built cables
- Motors with brake are available

Driver Features

- Output range from 30 W to 750 W
- 300% peak current over nominal
- Control via pulse train (speed and position)
- Four position resolution settings:
  - 500 pulses/rotation (0.72°/step)
  - 1,000 pulses/rotation (0.36°/step)
  - 5,000 pulses/rotation (0.072°/step)
  - 10,000 pulses/rotation (0.036°/step)
- SmartStep does not require the use of PC configuration software, making setup as easy as using a stepper motor for basic capabilities
- To optimize performance, use PC software for on-line auto-tuning of values and monitoring

Flux Vector Inverter 600V Constant Torque for Machine Automation

The G5+ Inverter offers ultra-fast processing. All systems are controlled by a 32-bit, 20 MHz RISC processor, which executes basic instructions in one clock cycle. The processor uses an innovative "5 stage pipeline architecture" which allows the processor to perform 5 instructions at one time. This results in a rating of 16 MIPS (Million Instructions Per Second).

- The control board is common to all chassis inverter sizes
- Field upgradeable Flash ROM
- Four programmable control modes to suit any specific application.
- Built-in motor auto-tuning for easy start-up
- 2 sets of motor constants — very useful in machine tools applications
- 2 Line x 16 characters alphanumeric operator makes programming easier to understand
- Dedicated Serial Communication Port allows to network the G5+ with other devices
- PID function with feedback loop
- Energy savings software helps reduce power consumption
- Customized CASE software for specific applications

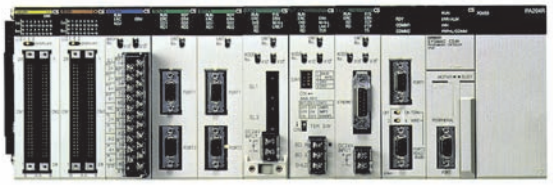
PLC-Based Accurate Positioning Control

From simple position measurement to multi-axis synchronized control, Omron offers a full range of PLC-based solutions:

- High-Speed Counter modules gather position information from SSI or incremental encoders. Actual positions are compared with internally started target values.
- Position Control modules are used for point-to-point positioning with servo drives or stepper motors. Target data and acceleration/deceleration curves can be adjusted on-the-fly.
- Position control modules equipped with MECHATROLINK-II interface can control multiple drives through a single, high-speed data link. Message routing through multiple communication layers allows the attached drives to be configured from any point in the control network.



MECHATROLINK-II is a registered trademark of Yaskawa Corporation.

Motion Controllers
CJ1/CS1-MC

High-Speed PLC-Based Motion Controllers

Motion control modules for CJ1 and CS1 PLC series are equipped with MECHATROLINK-II interface that can control multiple drives through a single, high-speed data link. Message routing through multiple communication layers allows the attached drives to be configured from any point in the control network.

- PLC-based motion controller eliminates integration of motion controllers from other suppliers
- Complete digital control of drives via MECHATROLINK-II replaces SERCOS programming
- Controls a total of 32 axes (30 physical max.)
- Simplified wiring saves design time and installation and maintenance costs
- Real multi-tasking and parallel programming
- Simple to develop and modify motion programs using BASIC
- Access to the complete system from one point allows quick troubleshooting and effective time management
- Linear, circular, and helical interpolation for accurate positioning
- Electronic axes synchronization produces smooth motion
- Electronic cam profiles simulates popular mechanical ones to shorten setup
- Dedicated inputs/outputs on the controller
- All features of the W-Series servos are available

MECHATROLINK-II High-Speed Motion Link

This high-speed interface replaces the costly discrete wiring required with traditional systems. Just one MECHATROLINK-II cable eliminates the need for about 15 to 18 wires for each axis, simplifying wiring, and reducing installation costs and time. It also means that maintenance and troubleshooting are minimized. With a baud rate of up to 10 MHz, the MECHATROLINK-II link provides communication cycle times of 0.5 ms for 4 axes, to 4 ms for 30 axes, ensuring fast, precise motion control.

3-Phase Hybrid Soft Starters Extend Motor Life

- G3JA-D Current Limit Starter for 3-phase, 6-lead motors provides internal Star-delta control and simplifies wiring. Star-delta and protective functions are included in this single unit
- G3JA-C Soft Start, Kick Start, Current Limit Start, and Soft Stop functions for 3-phase inductive motors satisfy motor performance needs for a wide range of applications. Internal protections include protection against overload and phase loss
- Smooth motor starts and stops can reduce mechanical shock, leading to longer motor life, less frequent servicing and lower maintenance costs
- Reduced power loss through hybrid control: Power supplied through a thyristor during starting or stopping and through a bypass relay during stable operation
- Slim 45-mm body saves installation space; all models have the same shape

- Electronic Thermal Overload Relay built in protects the motor from problems such as burning due to motor overload or locking. The overload class can be set to OFF, 10, 15, or 20
- Optional Auxiliary Contact Block enhances operation monitoring by providing an output of operating status
- Meets UL508; cULus listed; complies with IEC standards, etc.
