## Universal Priority Encoder

### General Description

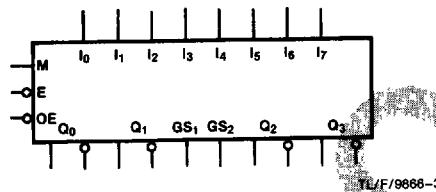

The 100165 contains eight input latches with a common Enable ( $\bar{E}$ ) followed by encoding logic which generates the binary address of the highest priority input having a HIGH signal. The circuit operates as a dual 4-input encoder when the Mode Control (M) input is LOW, and as a single 8-input encoder when M is HIGH. In the 8-input mode,  $Q_0$ ,  $Q_1$  and  $Q_2$  are the relevant outputs,  $I_0$  is the highest priority input and  $GS_1$  is the relevant Group Signal output. In the dual mode,  $Q_0$ ,  $Q_1$  and  $GS_1$  operate with  $I_0$ - $I_3$ ,  $Q_2$ ,  $Q_3$  and  $GS_2$

operate with  $I_4$ - $I_7$ . A GS output goes LOW when its pertinent inputs are all LOW.

Inputs are latched when  $\bar{E}$  goes HIGH. A HIGH signal on the Output Enable ( $\bar{OE}$ ) input forces all Q outputs LOW and GS outputs HIGH. Expansion to accommodate more inputs can be done by connecting the GS output of a higher priority group to the  $\bar{OE}$  input of the next lower priority group. All inputs have 50 k $\Omega$  pulldown resistors.

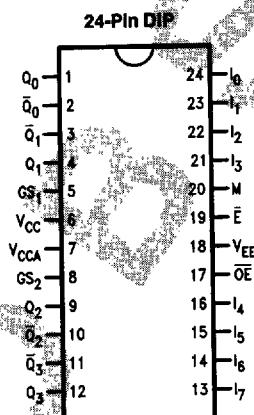

**Ordering Code:** See Section 6

### Logic Symbol

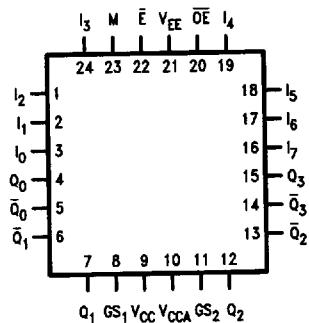

Pin Names	Description
$I_0$ - $I_7$	Data Inputs
$\bar{E}$	Enable Input (Active LOW)
$\bar{OE}$	Output Enable Input (Active LOW)
M	Mode Control Input
$GS_1$ - $GS_2$	Group Signal Outputs
$Q_0$ - $Q_3$	Data Outputs
$\bar{Q}_0$ - $\bar{Q}_3$	Complementary Data Outputs

Note 1: Absolute maximum ratings are those values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Parametric values specified at  $-4.2\text{V}$  to  $-4.8\text{V}$ .

Note 3: The specified limits represent the "worst case" value for the parameter. Since these "worst case" values normally occur at the temperature extremes, additional noise immunity and guard banding can be achieved by decreasing the allowable system operating ranges.

Note 4: Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.
