

PRODUCT DESCRIPTION

Tputty[™] 502 is best suited for applications where large tolerance differences create the need for compression of the interface material beyond 50% of its original thickness.

Tputty[™] 502 will ensure low pressures on the components being cooled. In conjunction with outstanding compression characteristics, Tputty[™] 502 has a high thermal conductivity, resulting in very low thermal resistance. Tputty[™] 502 is naturally tacky and requires no additional adhesive coating that can inhibit thermal performance.

FEATURES AND BENEFITS

- 3 W/mK thermal conductivity
- Soft and ultra high compressibility for low stress applications
- Fiberglass layer for reinforcement and better handling capabilities
- Low Dielectric Constant
- Environmentally friendly solution that meets regulatory requirements including RoHS and REACH
