1 Introduction

This user's guide contains background information for the TPS54332 as well as support documentation for the TPS54332EVM-416 evaluation module (HPA416). This document also includes the performance specifications, the schematic, and the bill of materials for the TPS54332EVM-416.

1.1 Background

The TPS54332 DC/DC converter is designed to provide up to a 3.5-A output from an input voltage source of 3.5 V to 28 V. [Table 1-1](#) provides the rated input voltage and output current range. This evaluation module is designed to demonstrate the small printed-circuit-board areas that can be achieved when designing with the TPS54332 regulator. The switching frequency is internally set at a nominal 1000 kHz. The high-side MOSFET is incorporated inside the TPS54332 package along with the gate drive circuitry. The low drain-to-source on resistance of the MOSFET allows the TPS54332 to achieve high efficiencies and helps keep the junction temperature low at high output currents. The compensation components are external to the integrated circuit (IC), and an external divider allows for an adjustable output voltage. Additionally, the TPS54332 provides adjustable slow start and undervoltage lockout inputs. The absolute maximum input voltage is 30 V for the TPS54332EVM-416.

Table 1-1. Input Voltage and Output Current Summary

EVM	Input Voltage Range	Output Current Range
TPS54332EVM-416	$V_{IN} = 5\text{ V to }15\text{ V}$	0 A to 3.5 A

1.2 Performance Specification Summary

[Table 1-2](#) provides a summary of the TPS54332EVM-416 performance specifications. Specifications are given for an input voltage of $V_{IN} = 12\text{ V}$ and an output voltage of 2.5 V, unless otherwise specified. The TPS54332EVM-416 is designed and tested for $V_{IN} = 7\text{ V to }28\text{ V}$. The ambient temperature is 25°C for all measurements, unless otherwise noted.

Table 1-2. TPS54332EVM-416 Performance Specification Summary

Specification	Test Conditions	MIN	TYP	MAX	Unit
V_{IN} voltage range		5	12	15	V
Output voltage set point			2.5		V
Output current range	$V_{IN} = 5\text{ V to }15\text{ V}$	0		3.5	A
Line regulation	$I_O = 1\text{ A}, V_{IN} = 5\text{ V to }15\text{ V}$		±0.16%		
Load regulation	$V_{IN} = 12\text{ V}, I_O = 0.2\text{ A to }3.5\text{ A}$		±0.10%		
Load transient response	$I_O = 0.75\text{ A to }2.5\text{ A}$	Voltage change		-10	mV
		Recovery time		400	µs
	$I_O = 2.5\text{ A to }0.75\text{ A}$	Voltage change		10	mV
		Recovery time		400	µs
Loop bandwidth	$V_{IN} = 12\text{ V}, I_O = 3.5\text{ A}$		42		kHz
Phase margin	$V_{IN} = 12\text{ V}, I_O = 3.5\text{ A}$		45		°
Input ripple voltage	$I_O = 3.5\text{ A}$		110		mVpp
Output ripple voltage	$I_O = 3.5\text{ A}$		10		mVpp
Output rise time			6		ms
Operating frequency			1000		kHz
Maximum efficiency	TPS54332EVM-416, $V_{IN} = 5\text{ V}, I_O = 0.5\text{ A}$		89%		

1.3 Modifications

These evaluation modules are designed to provide access to the features of the TPS54332. Some modifications can be made to this module.

1.3.1 Output Voltage Set Point

To change the output voltage of the EVM, change the value of resistor R_6 . Changing the value of R_6 can change the output voltage above 0.8 V. The value of R_6 for a specific output voltage can be calculated using [Equation 1](#).

$$R_6 = 10.2 \text{ k}\Omega \times \frac{0.8 \text{ V}}{V_{\text{OUT}} - 0.8 \text{ V}} \quad (1)$$

[Table 1-3](#) lists the R_6 values for some common output voltages. Note that V_{IN} must be in a range so that the minimum on time is greater than 130 ns, and the maximum duty cycle is less than 91%. The values given in [Table 1-3](#) are standard values, not the exact value calculated using [Equation 1](#). Changing the output voltage from 2.5 V effectively changes the output impedance, which affects the loop response. It can be necessary to modify the compensation component values. See the [TPS54332 3-A, 28-V Input Step-Down DC/DC Converter with Eco-mode](#) data sheet for details.

Table 1-3. Output Voltages Available

Output Voltage (V)	R_6 Value (k Ω)
1.8	8.25
2.5	4.75
3.3	3.24
5	1.96

2 Test Setup and Results

This section describes how to properly connect, set up, and use the TPS54332EVM-416 evaluation module. The section also includes test results typical for the evaluation module and covers the following:

- Efficiency
- Output voltage regulation
- Load transients
- Loop response
- Output ripple
- Input ripple
- Start-up

2.1 Input and Output Connections

The TPS54332EVM-416 is provided with input and output connectors and test points as shown in [Table 2-1](#). A power supply capable of supplying 3 A must be connected to J1 through a pair of 20 AWG wires. The load must be connected to J4 through a pair of 20 AWG wires. The maximum load current capability must be 3.5 A. Wire lengths must be minimized to reduce losses in the wires. Test point TP1 provides a place to monitor the V_{IN} input voltages with TP2 providing a convenient ground reference. TP5 is used to monitor the output voltage with TP6 as the ground reference.

Table 2-1. EVM Connectors and Test Points

Reference Designator	Function
J1	V_{IN} (see Table 1-1 for V_{IN} range)
J2	2-pin header for enable. Connect EN to ground to disable, open to enable.
J3	2-pin header for slow start monitor and GND
J4	V_{OUT} , 2.5 V at 3.5 A maximum
TP1	V_{IN} test point at V_{IN} connector
TP2	GND test point at V_{IN}
TP3	PH test point
TP4	Test point between voltage divider network and output. Used for loop response measurements.
TP5	Output voltage test point at OUT connector
TP6	GND test point at OUT connector

2.2 Efficiency

The efficiency of this EVM peaks at a load current of about 0.5 A and 5-V input, then decreases as the load current increases towards full load. [Figure 2-1](#) shows the efficiency for the TPS54332EVM-416 at an ambient temperature of 25°C.

Figure 2-1. TPS54332EVM-416 Efficiency

Figure 2-2 shows the efficiency for the TPS54332EVM-416 at lower output currents between 0.025 A and 0.250 A at an ambient temperature of 25°C.

Figure 2-2. TPS54332EVM-416 Low Current Efficiency

The efficiency can be lower at higher ambient temperatures, due to temperature variation in the drain-to-source resistance of the internal MOSFET.

2.3 Output Voltage Load Regulation

Figure 2-3 shows the load regulation for the TPS54332EVM-416.

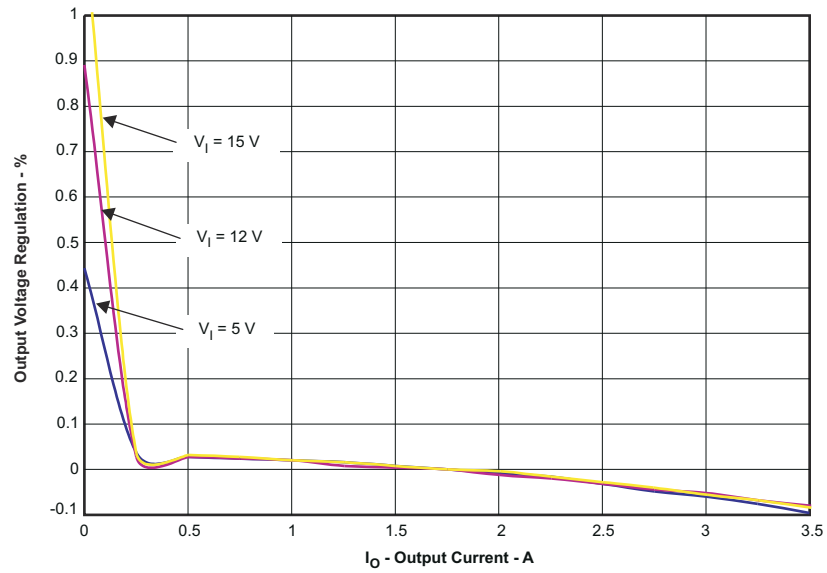

Figure 2-3. TPS54332EVM-416 Load Regulation

Measurements are given for an ambient temperature of 25°C.

2.4 Output Voltage Line Regulation

Figure 2-4 shows the line regulation for the TPS54332EVM-416.

Figure 2-4. TPS54332EVM-416 Line Regulation

2.5 Load Transients

Figure 2-5 shows the TPS54332EVM-416 response to load transients. The current step is from 0.75 A to 2.5 A at 12-V input. Total peak-to-peak voltage variation is as shown, including ripple and noise on the output.

Figure 2-5. TPS54332EVM-416 Transient Response

2.6 Loop Characteristics

Figure 2-6 shows the TPS54332EVM-416 loop response characteristics. Gain and phase plots are shown for V_{IN} voltage of 12 V. Load current for the measurement is 3.5 A.

Figure 2-6. TPS54332EVM-416 Loop Response

2.7 Output Voltage Ripple

Figure 2-7 shows the TPS54332EVM-416 output voltage ripple. The output current is the rated full load of 3.5 A and $V_{IN} = 12$ V. The ripple voltage is measured directly across the output capacitors.

Figure 2-7. TPS54332EVM-416 Output Ripple

2.8 Input Voltage Ripple

Figure 2-8 shows the TPS54332EVM-416 input voltage ripple. The output current is the rated full load of 3.5 A and $V_{IN} = 12$ V. The ripple voltage is measured directly across the input capacitors.

Figure 2-8. TPS54332EVM-416 Input Ripple

2.9 Powering Up

Figure 2-9 shows the start-up waveform. The top trace shows V_{OUT} and the bottom trace shows V_{IN} . The input voltage is 12 V and there is no load.

Figure 2-9. TPS54332EVM-416 Start-Up Relative to V_{IN}

2.10 Eco-mode Operation

At light load currents, the TPS54332 is designed to operate in pulse skipping Eco-mode. When the peak inductor current is lower than 100 mA typical, the device enters Eco-mode.

Figure 2-10 shows Eco-mode operation, channel 1 (C1) shows the output voltage while channel 2 (C2) shows the switching node (PH).

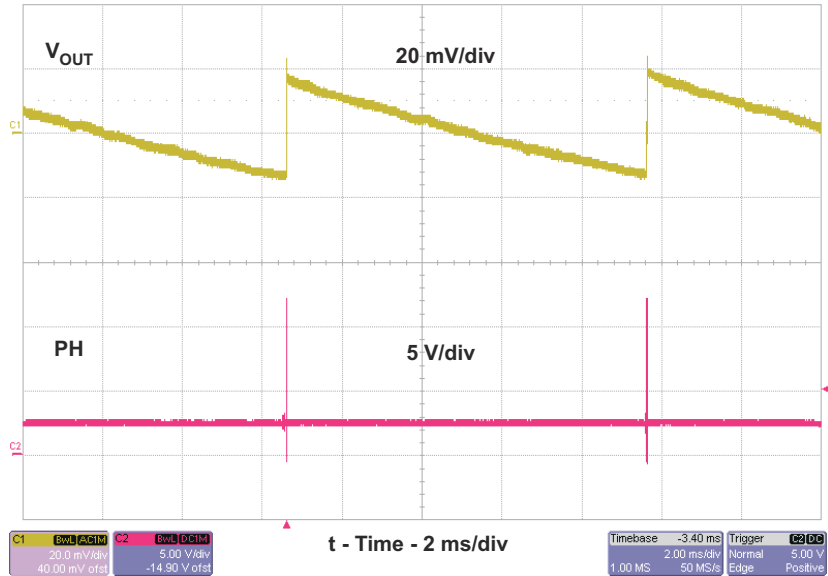

Figure 2-10. TPS54332EVM-416 Eco-mode Operation

3 Board Layout

This section provides a description of the TPS54332EVM-416, board layout, and layer illustrations.

3.1 Layout

Figure 3-1 through Figure 3-3 shows the board layout for the TPS54332EVM-416. The top-side layer of the EVM is laid out in a manner typical of a user application. The top and bottom layers are 2-oz. copper.

The top layer contains the main power traces for V_{IN} , V_{OUT} , and V_{PHASE} . Also on the top layer are connections for the remaining pins of the TPS54332 and a large area filled with ground. The bottom layer contains ground and a signal route for the BOOT capacitor. The top and bottom and internal ground traces are connected with multiple vias placed around the board including ten vias directly under the TPS54332 device to provide a thermal path from the top-side ground plane to the bottom-side ground plane.

The input decoupling capacitor (C2) and bootstrap capacitor (C4) are all located as close to the IC as possible. In addition, the voltage set-point resistor divider components are also kept close to the IC. The voltage divider network ties to the output voltage at the point of regulation, the copper V_{OUT} trace past the output capacitors, C3 and C8. For the TPS54332, an additional input bulk capacitor can be required, depending on the EVM connection to the input supply.

Figure 3-1. TPS54332EVM-416 Top-Side Layout

Figure 3-2. TPS54332EVM-416 Bottom-Side Layout

Figure 3-3. TPS54332EVM-416 Top-Side Assembly

3.2 Estimated Circuit Area

The estimated printed circuit board area for the components used in this design is 0.68 in². This area does not include test point or connectors.

4 Schematic and Bill of Materials

This section presents the TPS54332EVM-416 schematic and bill of materials.

4.1 Schematic

Figure 4-1 is the schematic for the TPS54332EVM-416.

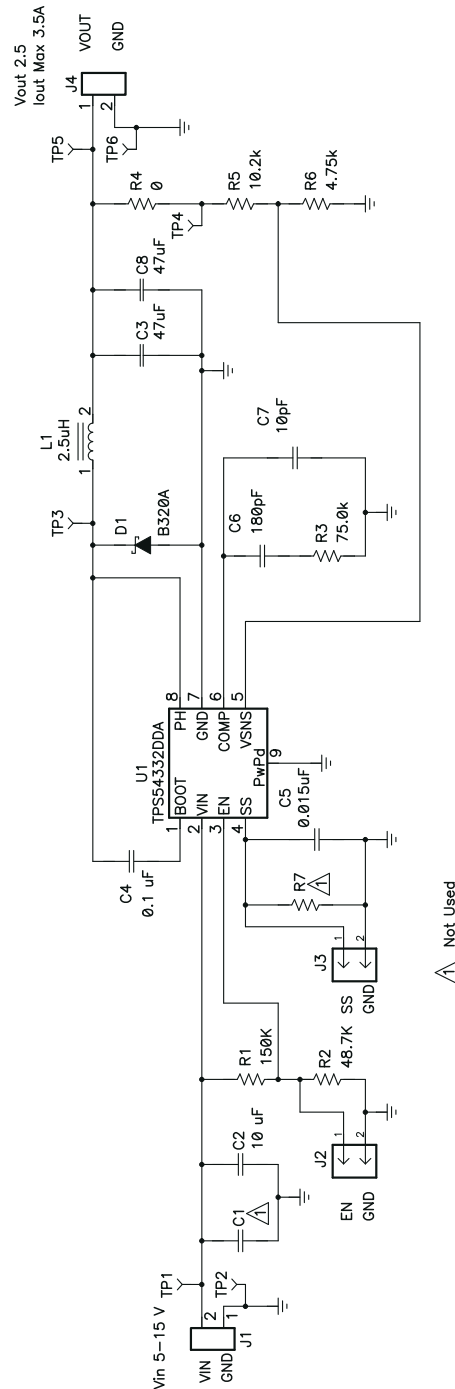

Figure 4-1. TPS54332EVM-416 Schematic

4.2 Bill of Materials

Table 4-1 presents the bill of materials for the TPS54332EVM-416.

Table 4-1. TPS54332EVM-416 Bill of Materials
