### OVERVIEW

---

#### Description

The DS28EL15 evaluation system (EV system) provides the hardware and software necessary to evaluate and program the DS28EL15 DeepCover® Secure Authenticator. EV system operation requires a host PC for user-friendly evaluation.

This evaluation system includes a DS9400 USB-to-I<sup>2</sup>C PC adapter, a DS2465 EV board, a DS9120Q+ evaluation socket board for a TDFN DS28EL15, and five DS28EL15 sample devices in a TDFN package. The EV software runs on Windows® 8, Windows 7, Windows Vista®, and Windows XP® operating systems. Detailed instructions for downloading and installing software, as well as general EV system operation are included in the EV system data sheet; this is available on request at the link to the right.

**Note: The DS9120Q+, DS2465 EV board, and DS9400# subcomponents are not available for direct sale outside of evaluation systems and data sheet specific to these components are not available.**

#### Key Features

- Complete EV System:
  - Five DS28EL15 ICs in TDFN-EP Package
  - One USB-to-I<sup>2</sup>C Module (DS9400#) Provides PC Connection
  - DS2465 EV Board Provides 1-Wire Interface and SHA-256 Coprocessor
  - One EV Board (DS9120Q+) with TDFN-EP Socket Provides Easy Chip Evaluation
- USB-to-I<sup>2</sup>C Module Contains Prolific PL-2303HXD USB-to-UART Chip
  - Enumerates as a Virtual PC COM Port

- Windows Certified Logo USB Device Driver Available
- Standard USB Cable Interface
- I<sup>2</sup>C Host Interface Supports 400kHz I<sup>2</sup>C Communication Speeds
- EV Board Contains Convenient On-Board Test Points
- Evaluation Software Available by Request
