### GENERAL DESCRIPTION

The Z90209 Emulation Module can be used like a One-Time Programmable (OTP) for plug-in emulation of the Z9020X chip in user target applications. It provides external EPROMs to simulate an OTP and can be used repeatedly. Its electrical characteristics are nearly identical with the OTP.

Users can develop and debug their application software using a Z90209 Emulator (Z9020900ZEM) and transfer it to the EPROMs on the Emulation Module for final test.
