54LS375/DM74LS375 4-Bit Latch

General Description

The 'LS375 is a 4-bit D-type latch for use as temporary storage for binary information between processing units and input/output or indicator units. When its Enable (E) input is HIGH, a latch is transparent, i.e., the Q output will follow the

D input each time it changes. When E is LOW a latch stores the last valid data present on the D input preceding the HIGH-to-LOW transition of E. The 'LS375 is functionally identical to the 'LS75 except for the corner power pins.

Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	10V
Operating Free Air Temperature Range	
54LS	-55°C to +125°C
DM74LS	0°C to +70°C
Storage Temperature Range	-65°C to +150°C

Note: The "Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
