### DESCRIPTION

HCF4532B is a monolithic integrated circuit fabricated in Metal Oxide Semiconductor technology available in DIP and SOP packages. HCF4532B consists of a combinational logic that encodes the highest priority input (D7-D0) to a 3-bit binary code. The eight inputs, D7 through D0,

### ORDER CODES

PACKAGE	TUBE	T & R
DIP	HCF4532BEY	
SOP	HCF4532BM1	HCF4532M013TR

each have an assigned priority. D7 is the highest priority and D0 is the lowest. The priority encoder is inhibited when the chip enable input  $E_1$  is low. When  $E_1$  is high the binary representation of the highest priority input appears on output lines Q2-Q0, and the group select line GS is high to indicate that priority inputs are present. The enable out ( $E_0$ ) is high when no priority inputs are present. If any input is high,  $E_0$  is low and all cascaded lower order stages are disabled.
