**\*2 Power dissipation measuring method**

**\*3 Measuring pulse response**

Pulse width distortion  $\Delta tw = t_{PHL} - t_{PLH}$

Note

(1) The impedance of the probe for the oscilloscope must be more than 1MΩ and less than 10pf.

## CAUTIONS

### 1. Storage

- For the devices which are stored out of their original packag for more than eight hours, it is better to bake them at about  $100\pm 5^{\circ}\text{C}$  for at least 4 hours before assembling.

### 2. ESD (Electrostatic Discharge)

Static Electricity or power surge will damage the devices.

Suggestions to prevent ESD damage:

- Use of a conductive wrist band or anti-electrostatic glove when handling these devices.
- All devices, equipment, and machinery must be properly grounded.
- Work tables, storage racks, etc. should be properly grounded.
- Use ion blower to neutralize the static charge which might have built up on surface of the device's plastic lens as a result of friction between LEDs during storage and handling.
