

Tetra

Arm-based Single Board Computer

95 x 125 mm
(3.7 x 4.9")

Overview

The Tetra is a power-efficient Arm-based quad-core embedded computer. It is ready for deployment into demanding industrial applications requiring rugged, long-life, power-efficient solutions. It features a full complement of on-board I/O.

VersaLogic's Tetra is rugged. It is engineered and validated to excel in unforgiving environments including high temperature, mechanical shock, and vibration. Each component has been carefully sourced to ensure reliable operation in the field.

This robust embedded computer provides connectivity via Gigabit Ethernet, USB, and CAN Bus interface, as well as HDMI and LVDS video support. It also includes a Mini PCIe socket for expandability, an I2C port, MIPI camera input, audio I/O, SPI, and a 6-axis accelerometer / magnetometer.

The available 10+ year product life support ensures long-term deployment in the field, free from expensive replacements that come from short, disposable lifecycles that are all too common.
