## FEATURES/BENEFITS

### Eccentric Collar Ball Bearings

For more than 70 years, DODGE® has been talking to mounted bearing users and listening to their needs. This experience led to design of the optimum mounted ball bearings.

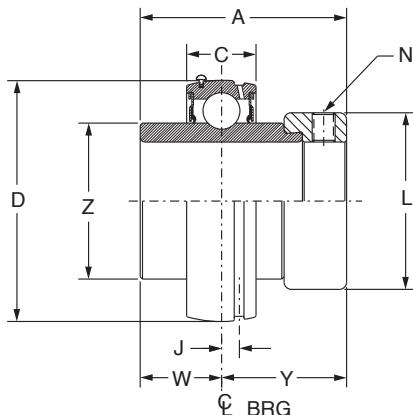

The result is the DODGE SXR line, the most current eccentric collar mounted ball bearing design on the market, provides the user unmatched quality and true total value.

The DODGE eccentric ball bearing is manufactured at the state-of-the-art DODGE bearing plant in Rogersville, Tennessee - an ISO 9002 certified plant.

- Precision-hardened inner ring
- Normal-Duty Wide Inner Ring (SXR)
- Eccentric collar locking system
- DODGE DualGuard land-riding, positive contact seal
- Stronger, flexible ball cage
- Simplified anti-rotation device
- Wide variety of housing configurations
- Available in 1/2" to 2-15/16", 17 to 75mm bore sizes
- SXR Seal options:
  - low torque labyrinth
- FDA/USDA lubricant and other special lubricants

#### Pop-In End Covers

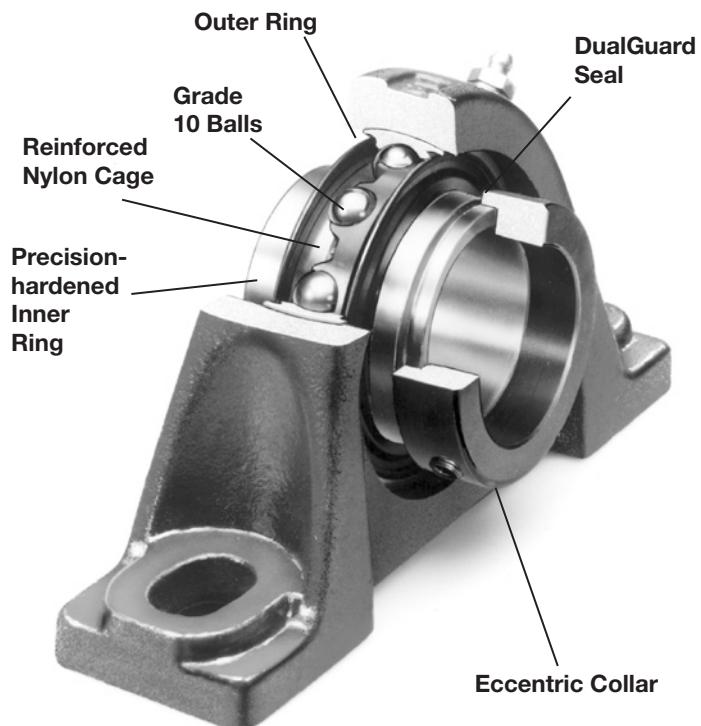

- Machined groove in housing accepts cover
- Secure fit to prevent spinning
- Keeps contaminants away from seal
- Creates safer work environment
- OSHA approved yellow
- Closed and open covers available
- Standard feature on PB, F2B, & F4B housing styles, 204-212 Series
- Press-In style for 214-218 Series
- Nomenclature
  - ECC-205-Y, Closed 205 Series
  - ECO-100Y, Open 1" Bore size

**DODGE**  
Self-Locking Collar

The inner ring of the bearing is locked to the shaft by a quarter-turn of the eccentric collar in the direction of shaft rotation. The collar is secured in place with a single setscrew.

**Note:** Instruction manuals and drawings for Dodge bearings are available on [www.dodge-pt.com](http://www.dodge-pt.com)

## FEATURES/BENEFITS

### Eccentric Collar Ball Bearings

#### DualGuard Seal

- Mechanically retained single lip seal for added strength
  - Purgeable design
  - Nitrile rubber lip
  - Keeps out contaminants
- Rubberized flinger
  - Dodge-only technology
  - Rubberized flinger provides external protection and discards contaminants as it rotates
  - Molded baffles in flinger act like a paddle wheel to help deflect liquids
  - Molded rubber increases the radius of the flinger which increases the acceleration rate of the contaminants as they are thrown away from the bearing
  - Rubber molding on the flinger is extended to the outer race of the bearing providing better protection than non-rubberized versions

#### Stronger Flexible Cage

The ball cage is made of heat-stabilized nylon with 33% fill short fiberglass reinforcement for added strength. The nylon material provides a natural lubricity for longer life. Fiberglass reinforcement allows higher operating temperatures than plain nylon, yet it is more resistant to fatigue than metallic cages.

Short fiberglass allows greater flexibility than steel or normal fiberglass, especially under misalignment. That means longer life in mounted bearings where some degree of misalignment is unavoidably encountered.

#### Wide Variety Of Housing Configurations

DODGE provides a wide variety of durable eccentric mounted ball bearings. Housing configurations include:

- Pillow blocks (2-bolt and tapped base)
- Flange bearings (2- and 4-bolt)
- Hanger bearings
- Cylindrical units
- Take-up bearings
- Take-up frames

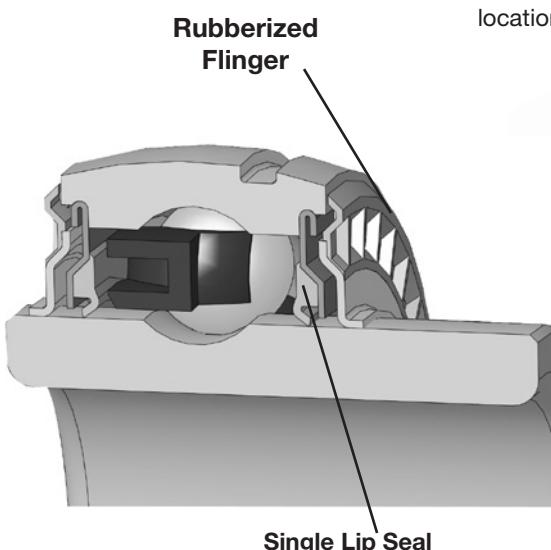

#### In Stock Near You

The complete line of DODGE mounted ball bearings is available at your local authorized DODGE distributor. For more information, check the yellow pages for your local distributor, call (864) 297-4800 or fax (864)-281-2318.

#### Anti-Rotation Pin

An anti-rotation pin prevents rotation of the outer race within the housing.

Simple and effective, it makes system inserts easier to replace. There is no need to remove and replace grease fittings, location pins or other devices.

**Note:** Instruction manuals and drawings for Dodge bearings are available on [www.dodge-pt.com](http://www.dodge-pt.com)

# HOW TO ORDER/NOMENCLATURE

## Eccentric Collar Ball Bearings

### Nomenclature

P2B -	SXR -	104 -	NL	<p>Modification or feature            E = Expansion            FF = DualGuard Plus seals (with Flingers)            HT = High Temperature option (400° F maximum)            LL = Low torque labyrinth seal            MOD = Modified            NL = No Lube (sealed for life)            RL = Relube (used with SLX flanges)</p>
				<p>Shaft size            Inches:            First digit = Number of inches            Second &amp; third digits = Number of sixteenths of an inch            104 = Indicates 1-4/16 or 1-1/4            S = Next smaller ring size. E.g. 1-1/4 206 would be written as 104S            L = Next larger ring size. E.g. 1/2 204 would be written as 008L</p>
				<p>Metric:            First two digits = number of millimeters            M = Metric</p>
				<p>Bearing type:            SXR = Wide inner ring, normal duty, Eccentric locking Collar            SLX = Narrow inner ring, light duty, stamped steel housing, eccentric locking collar            SXV = Narrow inner ring, intermediate duty, eccentric locking collar            Suffixes to the above:            B = Low backing height pillow block            H = High backing height (used with non-expansion and expansion units)            U = Higher back pillow block (for interchangeability with competitor pillow blocks)</p>
				<p>Housing:            CYL = Cylindrical Unit            F2B = 2 bolt flange            F2BZ = 2 bolt flange with pilot machined on the back side            F3B = 3 bolt flange            F4B = 4 bolt flange            FB = Flange bracket            FC = Flanged cartridge (piloted flange)            F&amp;B = Fan and blower pillow block            HNG = Hanger bearing            LF = 3 bolt light duty flange            LFT = 2 bolt light duty flange            NSTU = Narrow slot take-up            P2B = 2 bolt base pillow block            SCHB = Screw conveyor hanger bearing            TB = Tapped base pillow block            TP = Top angle take-up            WSTU = Wide slot take-up</p>

# SELECTION

## Eccentric Collar Ball Bearings

DODGE mounted ball bearings are primarily designed for radial loading. However, they have the capacity to carry thrust loads and combined radial/thrust loads. The maximum recommended load which can be applied is limited by various components in the system, such as bearing, housing, shaft attachments, speed and life requirements. DODGE mounted ball bearings have been applied successfully when these limits have been exceeded under controlled operating conditions. Contact DODGE Engineering for applications which exceed these recommendations.

Select a bearing from the Selection Chart that has a radial load rating at the operating speed equal to or greater than the calculated Equivalent Radial load for a desired  $L_{10}$  life. This simple method is all that is required for the majority of general applications and provides for occasional average shock loads.

**$L_{10}$  Hours Life**-is the life which may be expected for at least 90% of a given group of bearings operating under identical conditions. For an  $L_{10}$  hours life other than those listed in the Selection Chart, multiply the equivalent Radial load by one of the following factors. For 50,000  $L_{10}$  hours life, use a factor of 1.18 and for 80,000, use 1.39. Then select a bearing from the bold face (30,000)  $L_{10}$  ratings only in the Selection Chart that has a rating equal to or greater than this value.

**Heavy Service**-For heavy shock loads, frequent shock loads or severe vibrations, add up to 50% (according to severity of conditions) to the Equivalent Radial Load to obtain a Modified Equivalent Radial Load. Consult Application Engineering for additional selection assistance.

A thrust load value of C/10 is recommended as a guide for general applications and will give adequate  $L_{10}$  life. Where substantial radial load pulls the housing away from the mounting base, both the hold-down bolts and housing must be of adequate strength. Auxiliary load carrying devices, such as sheer bars, are advisable for side or end-loading of pillow blocks and radial loads for flange units.

To determine the  $L_{10}$  hours life for loads and RPM's not listed use the following equation:

$$L_{10} = \left( \frac{C}{P} \right)^3 \times \frac{16,667}{N}$$

Where:

$L_{10}$  = Life, hours

C = Dynamic Capacity, lbs. or N

P = Equivalent Radial Load, lbs. or N

N = Revolutions per minute

When the load on a ball bearing is solely a radial load with no thrust (axial) load, the Equivalent Radial Load (P) is equal to the actual radial load. However, when a thrust (axial) load is applied, the radial and thrust loads applied must be converted into an Equivalent Radial Load. The use of the X (radial factor) and Y (thrust factor) from Table 1 convert the actual applied thrust and radial loads to an Equivalent Radial Load which has the same effect on the life of a bearing as a radial load of this magnitude.

$$P = (X \times FR) + (Y \times FA)$$

Where:

P = Equivalent Radial Load, lbs.

FR = Radial load, lbs.

FA = Thrust load, lbs.

e = Thrust load to radial load factor (Table 1)

X = Radial load factor (Table 1)

Y = Thrust factor (Table 1)

$C_0$  = Basic static capacity

To find X and Y, first calculate  $F_A/C_0$  to determine e. Calculate  $F_A/F_R$  and compare to e to determine the X and Y factors to use from Table 1 .

Substitute all known values into the Equivalent Radial Load equation. The Equivalent Radial loads (P) thus determined can be used in the  $L_{10}$  life formula or compared to the allowable Equivalent Radial Load rating desired in the expanded rating chart to select a bearing (Table 2 ).

If calculated value of P is less than  $F_R$ , use  $P=F_R$ .

**Table 1**

$F_A / C_0$	e	Radial/thrust Factors			
		If $F_A/F_R$ is equal to or less than e		If $F_A/F_R$ is greater than e	
		$F_A/F_R <= e$	$F_A/F_R > e$	X	Y
0.014	0.19	1	0	0.56	2.30

0.280	0.38	1	0	0.56	1.15
0.420	0.42	1	0	0.56	1.04
0.560	0.44	1	0	0.56	1.00

**Lubrication**-DODGE Ball Bearings are lubricated at the factory and are ready to run. The bearings are initially lubricated with a lithium complex base grease and should be relubricated with the same or some equivalent. For high speeds, high loads, extreme temperatures and other abnormal operating conditions, special greases may be required. Contact DODGE Application Engineering for recommendations on these types of applications.

**Misalignment**-DODGE Ball Bearings are designed to allow a maximum of  $\pm 2^\circ$  static misalignment. These bearings are not suitable for dynamic misalignment. To ensure good alignment, mounting surfaces must be checked for flatness and must lie in the same plane. When tightening base bolts, each bolt should be alternately tightened in incremental torque values until full torque is achieved to prevent the angular shifting of the pillow block that occurs when one bolt is tightened to its full torque. Shimming may be required to minimize misalignment.

### Lubrication

High Speed Operation - In the higher speed ranges, too much grease will cause over-heating. The amount of grease that the bearing will take for a particular high speed application can only be determined by experience. If excess grease in the bearing causes overheating, it will be necessary to remove grease fitting to permit excess grease to escape. The bearing has been greased at the factory and is ready to run. When establishing a relubrication schedule, note that a small amount of grease at frequent intervals is preferable to a large amount at infrequent intervals.

◆ NOTE: Dodge does not recommend the use of oils or locking agents on setscrew threads. However, if utilized, the minimum installation torque values should be followed.

### Lubrication Guide Use a No. 2 Lithium complex base grease or equivalent\*

Hours Run per Day	Suggested Lubrication Period in Weeks							
	1 to 250 RPM	251 to 500 RPM	501 to 750 RPM	751 to 1000 RPM	1001 to 1500 RPM	1501 to 2000 RPM	2001 to 2500 RPM	2501 to 3000 RPM
8	12	12	10	7	5	4	3	2
16	12	7	5	4	2	2	1	1
24	10	5	3	2	1	1	1	1

\* For EZ-KLEEN series bearings, use an aluminum complex base grease.

Lubrication recommendations are intended for standard products applied in general operating conditions. For modified products, high temperature applications, and other anomalous applications contact product engineering at 864-284-5700.

Note: Bearing analysis program "BEST" is available on [www.ptwizard.com](http://www.ptwizard.com)

\* Use straight thread for the pipe. Bearing can be secured with a heavy locknut.

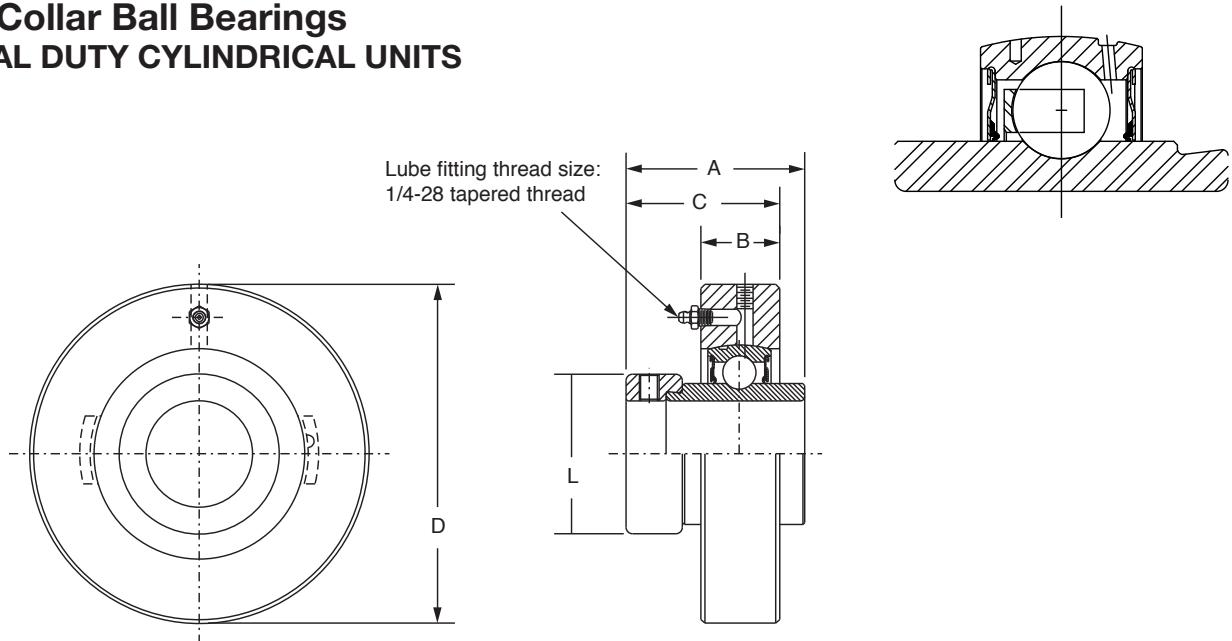

Pipe plug and lube fitting are factory installed and may be reversed from position shown.

Note: Inserts use the ProGard Plus (-FF) seals.

## Eccentric Collar Ball Bearings

### LUBRICANTS

DODGE ball bearings are factory lubricated with a lithium complex base lubricant. For applications where extreme ambient temperatures or speeds are anticipated or environmental considerations require a different lubricant, DODGE has a variety of lubricants available. Special lubricant options usually require set-up charges and premiums.

### HIGH TEMPERATURE

DODGE high temperature bearings are designed to operate in temperatures from 225° F (108° C) to 400° F (205° C). The bearings have adjusted internal clearance, labyrinth seals, retainers, and lubricants to meet the temperature needs of the application. To insure proper replacement, the bearing is identified by a six digit part number etched on a stainless steel nameplate riveted to the housing. The part number identifies the specific feature of the bearing. High temperature bearings are factory assembled to order and are available at extra cost. Consult Dodge Engineering for application assistance at (864)284-5700 or fax (864) 281-2317.

### AIR HANDLING

Industrial fans and blowers generally operate at high speeds with bearing requirements of long life and quiet operation. Dodge stocks a complete line of SC and SCM air handling ball bearings that are specifically designed to meet the requirements of the Air Handling Industry. However SXR air handling ball bearings in a wide variety of sizes and housing configurations can be supplied on a made/assembled to order basis. These bearings are 100% inspected for quiet operation and are recommended for fan and blower operations.

### OTHER MODIFICATIONS

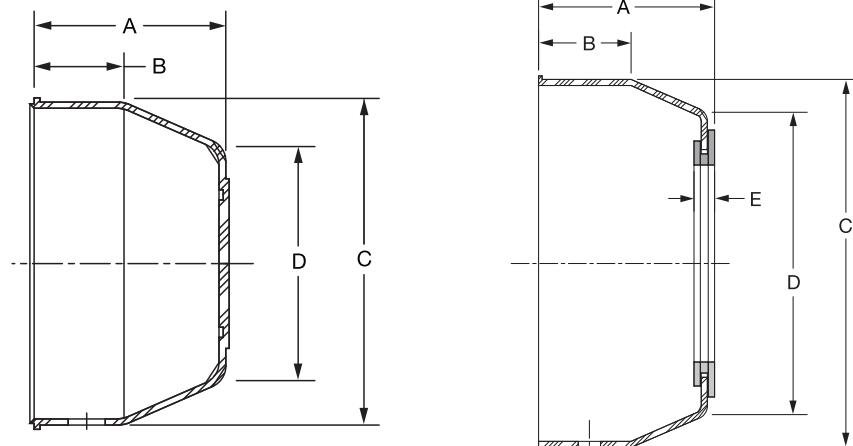

For applications requiring modifications not listed, we encourage you to contact our Customer Order Engineering Department at (864) 284-5700 or fax (864) 281-2317.

### Eccentric Collar Ball Bearings DODGE Ball Bearing End Covers\*

- Fits all styles of DODGE cast iron housed ball bearings: Pillow Blocks, 2 and 4 Bolt Flanges, and Take-Up bearings
- Injected molded, impact resistant, OSHA safety yellow end covers meet requirements for exposed rotating shafts
- Stainless steel "C" Washer for gripping power
- No modification or machining of existing housings required
- Concentric knockout grooves on inside of end cover for thru-shaft
- DODGE six digit part number and description embossed inside
- Operating temperature to 250° F
- For non relubricable/sealed for life applications (-NL), part number 430020 hex head plug is available

#### Nomenclature

EC - 205 - P

End Cover      ISO & ABMA ring size

"Blank" fits all housing styles as noted  
 P - Pillow Blocks, including tapped base  
 X - all other housing styles as noted

## FEATURES/BENEFITS

### Eccentric SXV Collar

- Eccentric Locking Collar
- Narrow Inner Ring Design
- Fiberglass Reinforced Nylon Cage
- Grade 10 Balls
- Proguard Single Lip Seal
- No Groove in Housing for End Cover
- Multiple Housing Styles Available  
P2B, F2B, F4B, WSTU, NSTU
- Bore Range  
1/2" to 2-3/16"  
20mm to 55mm

### Lubrication

High Speed Operation - In the higher speed ranges, too much grease will cause over-heating. The amount of grease that the bearing will take for a particular high speed application can only be determined by experience. If excess grease in the bearing causes overheating, it will be necessary to remove grease fitting to permit excess grease to escape. The bearing has been greased at the factory and is ready to run. When establishing a relubrication schedule, note that a small amount of grease at frequent intervals is preferable to a large amount at infrequent intervals.

◆ NOTE: Dodge does not recommend the use of oils or locking agents on setscrew threads. However, if utilized, the minimum installation torque values should be followed.

### Lubrication Guide Use a No. 2 Lithium complex base grease or equivalent\*

Hours Run per Day	Suggested Lubrication Period in Weeks							
	1 to 250 RPM	251 to 500 RPM	501 to 750 RPM	751 to 1000 RPM	1001 to 1500 RPM	1501 to 2000 RPM	2001 to 2500 RPM	2501 to 3000 RPM
8	12	12	10	7	5	4	3	2
16	12	7	5	4	2	2	1	1
24	10	5	3	2	1	1	1	1

\* For EZ-KLEEN series bearings, use an aluminum complex base grease.

Lubrication recommendations are intended for standard products applied in general operating conditions. For modified products, high temperature applications, and other anomalous applications contact product engineering at 864-284-5700.

## Eccentric SXV Collar Ball Bearings

### LUBRICANTS

DODGE ball bearings are factory lubricated with a lithium complex base lubricant. For applications where extreme ambient temperatures or speeds are anticipated or environmental considerations require a different lubricant, DODGE has a variety of lubricants available. Special lubricant options usually require set-up charges and premiums.

### SEALS

The PROGUARD PLUS seal is a highly effective positive contact, land riding seal designed to meet the requirements for the majority of applications. For extreme contamination or high pressure wash down, flingers can be added to provide additional protection. For high speeds or where seal drag would be an impediment, a labyrinth seal is available.

### AIR HANDLING

Industrial fans and blowers generally operate at high speeds with bearing requirements of long life

and quiet operation. Dodge stocks a complete line of SC and SCM air handling ball bearings that are specifically designed to meet the requirements of the Air Handling Industry. However SXR air handling ball bearings in a wide variety of sizes and housing configurations can be supplied on a made/assembled to order basis. These bearings are 100% inspected for quiet operation and are recommended for fan and blower operations.

### OTHER MODIFICATIONS

For applications requiring modifications not listed, we encourage you to contact our Customer Order Engineering Department at (864) 284-5700 or fax (864) 281-2317.

## RELATED PRODUCTS

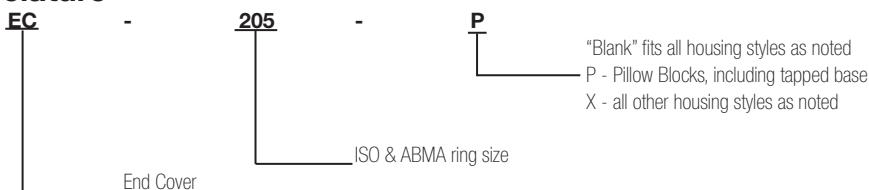

### Eccentric SXV Collar Ball Bearings DODGE Ball Bearing End Covers\*

- Fits all styles of DODGE cast iron housed ball bearings: Pillow Blocks, 2 and 4 Bolt Flanges, and Take-Up bearings
- Injected molded, impact resistant, OSHA safety yellow end covers meet requirements for exposed rotating shafts
- Stainless steel "C" Washer for gripping power
- No modification or machining of existing housings required
- Concentric knockout grooves on inside of end cover for thru-shaft
- DODGE six digit part number and description embossed inside
- Operating temperature to 250° F
- For non relubricable/sealed for life applications (-NL), part number 430020 hex head plug is available
