

QUADRUPLE 2-TO-1-LINE DATA SELECTORS/MULTIPLEXERS (INVERTED DATA OUTPUTS) GD54/74LS158

Features

- Buffered Inputs and Outputs
- Converted outputs provided.

Applications

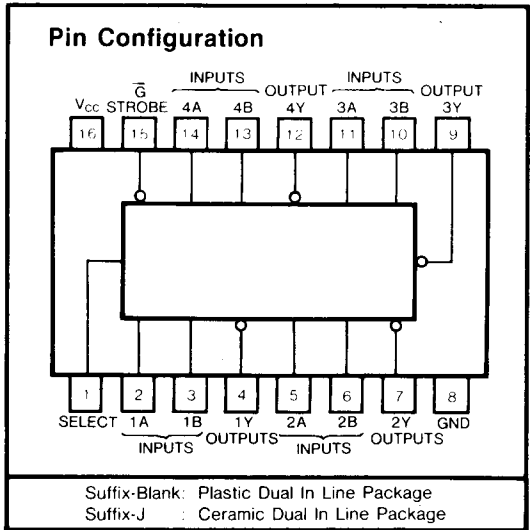

- Expand Any Data Input Point
- Multiplex Dual Data Buses
- Generate Four Functions of Two Variables (One Variable is Common)
- Source Programmable Counters

Description

This monolithic data selector/multiplexer contains inverters and drivers to supply full on-chip data selection to the four output gates. A separate strobe input is provided. A 4-bit word is selected from one of two sources and is routed to the four outputs. The LS 158 presents inverted data to minimize propagation delay time.

Note 3: I_{CC} is measured with all outputs open, and all inputs at 4.5V

Note 4: I_{CC} is measured with all A inputs at 4.5V and all other inputs at 0V.
