Description

The Harris HCTS161MS high-reliability high-speed presettable four-bit binary synchronous counter features asynchronous reset and look-ahead carry logic. The HCS161 has an active-low master reset to zero, $\overline{\text{MR}}$. A low level at the synchronous parallel enable, $\overline{\text{SPE}}$, disables counting and allows data at the preset inputs (P0 - P3) to load the counter. The data is latched to the outputs on the positive edge of the clock input, CP. The HCTS161MS has two count enable pins, PE and TE. TE also controls the terminal count output, TC. The terminal count output indicates a maximum count for one clock pulse and is used to enable the next cascaded stage to count.

The HCTS161MS utilizes advanced CMOS/SOS technology to achieve high-speed operation. This device is a member of radiation hardened, high-speed, CMOS/SOS Logic Family.

The HCTS161MS is supplied in a 16 lead Weld Seal Ceramic flatpack (K suffix) or a Weld Seal Ceramic Dual-In-Line Package (D suffix).

l = LOW-voltage level one setup time prior to the LOW-to-HIGH clock transition,

q = Lower-case letters indicate the state of the referenced output prior to the LOW-to-HIGH clock transition.

NOTES:

1. The TC output is HIGH when TE is HIGH and the counter is at Terminal count (HHHH).
2. The HIGH-to-LOW transition of \overline{SPE} should only occur while CP is HIGH for conventional operation.
