Description

The PDM31038 is a high-performance CMOS static RAM organized as 262,144 x 4 bits. Writing to this device is accomplished when the write enable (\overline{WE}) and the chip enable (\overline{CE}) inputs are both LOW. Reading is accomplished when \overline{WE} remains HIGH and \overline{CE} and \overline{OE} are both LOW.

The PDM31038 operates from a single +3.3V power supply and all the inputs and outputs are fully TTL-compatible.

The PDM31038 is available in a 32-pin 300-mil and 400-mil plastic SOJ, and a 32-pin plastic TSOP for surface mount applications in revolutionary pinout.

- NOTE: 1. Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
2. Appropriate thermal calculations should be performed in all cases and specifically for those where the chosen package has a large thermal resistance (e.g., TSOP). The calculation should be of the form: $T_j = T_a + P * \theta_{ja}$ where T_a is the ambient temperature, P is average operating power and θ_{ja} the thermal resistance of the package. For this product, use the following θ_{ja} values:

SOJ: 72° C/W
 TSOP: 95° C/W
