OCTAL BUS TRANSCEIVER

TC74HCT245AP/AF/AFW 3-STATE NON-INVERTING

TC74HCT640AP/AF 3-STATE INVERTING

TC74HCT643AP/AF/AFW 3-STATE INVERTING AND NON-INVERTING

The TC74HCT245A, HCT640A and HCT643A are high speed CMOS OCTAL BUS TRANSCEIVERS fabricated with silicon gate C²MOS technology.

They achieve the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

Their inputs are compatible with TTL, NMOS, and CMOS output voltage levels.

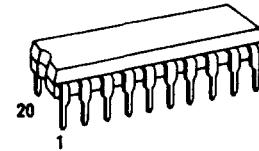

They are intended for two-way asynchronous communication between data busses. The direction of date transmission is determined by the level of the DIR input.

The enable input (\bar{G}) can be used to disable the device so that the busses are effectively isolated.

All inputs are equipped with protection circuits against static discharge or transient excess voltage.

FEATURES:

- High Speed $t_{pd}=10\text{ns}(\text{typ.})$ at $V_{CC}=5\text{V}$
- Low Power Dissipation $I_{CC}=4\mu\text{A}(\text{Max.})$ at $TA=25^\circ\text{C}$
- Compatible with TTL outputs $V_{IL}=0.8\text{V}(\text{Max.}), V_{IH}=2.0(\text{Min.})$
- Wide Interfacing ability LSTTL, NMOS, CMOS
- Output Drive Capability 15 LSTTL Loads
- Symmetrical Output Impedance $|I_{OH}|=I_{OL}=6\text{mA}(\text{Min.})$
- Balanced Propagation Delays $t_{PLH}=t_{PHL}$
- Pin and Function Compatible with 74LS245, 640, 643

P(DIP20-P-300A)

F(SOP20-P-300) FW(SOL20-P-300)

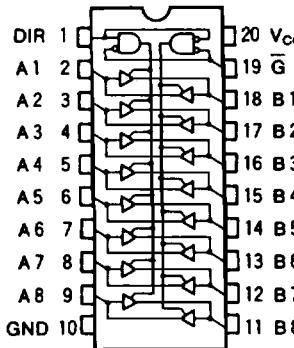

APPLICATION NOTES

1) Do not apply a signal to any bus terminal when it is the output mode. Damage may result.

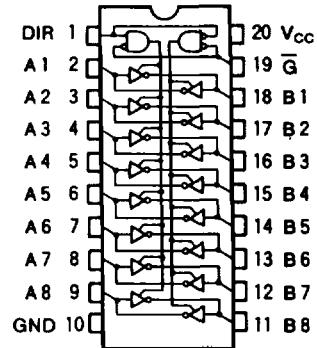

2) All floating (high impedance) bus terminals must have their input levels fixed by means of pull up or down resistors or bus terminator IC's such as the TOSHIBA TC40117BP.

Note(1): C_{PD} is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load.

Average operating current can be obtained by the equation:

$$I_{CC\text{avg}} = C_{PD} \cdot V_{CC} \cdot f_N + I_{CC}/8(\text{per bit})$$
