### description

These quadruple bus transceivers are designed for data transmission from individual lines of the A bus to individual lines of the B bus or the reverse, depending on the logic levels at the direction-control pins DIR1 through DIR4. These direction controls (one for each channel) allow maximum flexibility in timing. The enable inputs  $\bar{G}BA$  and  $\bar{G}AB$  can be used to disable the A or B outputs respectively, or to disable both buses for effective isolation.

The SN54LS446 and SN54LS449 are characterized for operation over the full military temperature range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The SN74LS446 and SN74LS449 are characterized for operation from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ .

### FUNCTION TABLE

ENABLE		DIRECTION	OPERATION 'LS446	OPERATION 'LS449
$\bar{G}BA$	$\bar{G}AB$	DIR		
H	H	X	Isolation	Isolation
X	L	H	$\bar{A}$ data to B Bus	A data to B Bus
L	X	L	$\bar{B}$ data to A Bus	B data to A Bus
X	H	H	Isolation	Isolation
H	X	L	Isolation	Isolation

H = high level, L = low level, X = irrelevant

### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

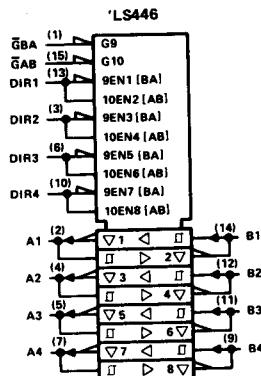

Supply voltage, VCC (see Note 1)	.....	7 V
Input voltage	.....	7 V
Off-state output voltage	.....	5.5 V
Operating free-air temperature range: SN54LS'	.....	$-55^{\circ}\text{C}$ to $125^{\circ}\text{C}$
SN74LS'	.....	$0^{\circ}\text{C}$ to $70^{\circ}\text{C}$
Storage temperature range	.....	$-65^{\circ}\text{C}$ to $150^{\circ}\text{C}$

NOTE 1: Voltage values are with respect to the network ground terminal.

PRODUCTION DATA documents contain information current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

			Outputs low	47	75	47	75		
			Outputs at Hi-Z	50	80	50	80		

<sup>†</sup> For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions.

<sup>‡</sup> All typical values are at  $V_{CC} = 5 \text{ V}$ ,  $T_A = 25^\circ\text{C}$ .

<sup>§</sup> Not more than one output should be shorted at a time, and duration of the short-circuit should not exceed one second.
