Quad 2-Input Exclusive-OR Gates

Description

These devices contain four independent 2-input Exclusive-OR gates. They perform the Boolean functions
 $Y = A \oplus B = AB + A\bar{B}$.

Fabrication using ISI proprietary ICE-MOS process, these devices provide speeds and drive capability equivalent to their ALSTTL counterparts and yet maintain CMOS power levels. The input and output voltage levels allow direct interface with TTL, NMOS and CMOS devices without any external components.

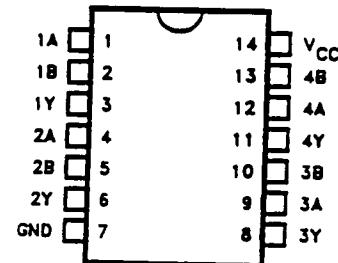

All inputs and outputs are protected from damage due to static discharge by internal diode clamps to V_{CC} and ground.
