

SN74LV373A

SCLS407M - APRIL 1998 - REVISED DECEMBER 2022

# SN74LV373A Octal Transparent D-Type Latches With 3-State Outputs

## 1 Features

Texas

INSTRUMENTS

- $V_{CC}$  operation of 2 V to 5.5 V
- Maximum t<sub>pd</sub> of 8.5 ns at 5 V
- Typical V<sub>OLP</sub> (Output Ground Bounce) < 0.8 V at V<sub>CC</sub> = 3.3 V, T<sub>A</sub> =  $25^{\circ}$ C
- Typical V<sub>OHV</sub> (Output V<sub>OH</sub> Undershoot) > 2.3 V at V<sub>CC</sub> = 3.3 V, T<sub>A</sub> = 25°C
- Support Mixed-Mode Voltage Operation on All Ports
- Ioff Supports Partial-Power-Down Mode Operation
- Latch-Up Performance Exceeds 250 mA Per JESD 17

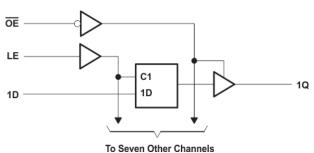

## 2 Applications

- **Printers**
- **Network Switches**
- **Tests and Measurements**
- Wireless Infratructure
- Motor Controls
- Server Motherboards

## **3 Description**

The SN74LV373A device is an octal transparent Dtype latch designed for 2 V to 5.5 V V<sub>CC</sub> operation.

| Package Information |            |                    |  |  |  |  |  |  |  |  |
|---------------------|------------|--------------------|--|--|--|--|--|--|--|--|
| PART NUMBER         | PACKAGE    | BODY SIZE (NOM)    |  |  |  |  |  |  |  |  |
|                     | VQFN (20)  | 4.50 x 3.50 mm     |  |  |  |  |  |  |  |  |
|                     | SSOP (20)  | 7.50 x 5.30 mm     |  |  |  |  |  |  |  |  |
| SN74LV373A          | TSSOP (20) | 6.50 x 4.40 mm     |  |  |  |  |  |  |  |  |
| SIN/4LV3/3A         | TVSOP (20) | 5.00 x 4.40 mm     |  |  |  |  |  |  |  |  |
|                     | SOIC (20)  | 12.80 x 7.50 mm    |  |  |  |  |  |  |  |  |
|                     | SO (20)    | 12.60 mm × 5.30 mm |  |  |  |  |  |  |  |  |

## **4 Revision History**

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

| С | hanges from Revision L (August 2016) to Revision M (December 2022) Pag  | je       |
|---|---|----------|
| • | Updated the format for tables, figures, and cross-references throughout the document  | .1       |
| С | hanges from Revision K (December 2014) to Revision L (August 2016) Pag  | je       |
| • | Updated Device Information table to include all available packages  | .1       |
| • | Changed I <sub>OL</sub> = 4 mA to I <sub>OL</sub> = 2 mA and 3 V to 2.3 V for V <sub>OL</sub> in <i>Electrical Characteristics</i>  | .7       |
| • | Deleted Related Links section1  | 15       |
| • | Added Receiving Notification of Documentation Updates section and Community Resources section   | 15       |
| С | hanges from Revision J (April 2005) to Revision K (December 2014) Pag   | je       |
| • | Added Applications, Device Information table, Pin Functions table, ESD Ratings table, Thermal Information table, Typical Characteristics, Feature Description section, Device Functional Modes, Application and Implementation section, Power Supply Recommendations section, Layout section, Device and Documentation Support section, and Mechanical, Packaging, and Orderable Information sectionDeleted Ordering Information table. | .1<br>.1 |
| ٠ | Changed MAX operating temperature to 125°C in Recommended Operating Conditions table.   | . 6      |

### 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                  |   |   | MIN  | MAX | UNIT |
|------------------|---|---|------|-----|------|
| V <sub>CC</sub>  | Supply voltage  |   | -0.5 | 7   | V    |
| VI               | Input voltage <sup>(2)</sup>                              | Input voltage <sup>(2)</sup>  |      |     |      |
| Vo               | Voltage range applied to any output in the                | Voltage range applied to any output in the high-impedance or power-off state <sup>(2)</sup> |      |     |      |
| Vo               | Output voltage <sup>(2) (3)</sup>                         | Output voltage <sup>(2) (3)</sup>   |      |     |      |
| I <sub>IK</sub>  | Input clamp current                                       | V <sub>I</sub> < 0  |      | -20 | mA   |
| I <sub>OK</sub>  | Output clamp current                                      | V <sub>O</sub> < 0  |      | -50 | mA   |
| I <sub>O</sub>   | Continuous output current                                 | $V_{O} = 0$ to $V_{CC}$   |      | ±35 | mA   |
|                  | Continuous channel current through V <sub>CC</sub> or GND |   |      | ±70 | mA   |
| T <sub>stg</sub> | Storage temperature                                       |   | -65  | 150 | °C   |

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Section 6.3 is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.

(3) This value is limited to 5.5-V maximum.

#### 6.2 ESD Ratings

|                    |  |   | VALUE | UNIT |
|--------------------|--|---|-------|------|
| V <sub>(ESD)</sub> |  | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>                             | ±3000 |      |
|                    |  | atic discharge Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup> |       | V    |
|                    |  | Machine Model (MM)  | ±200  |      |

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                 |                                |  | MIN                   | MAX                   | UNIT |
|-----------------|--------------------------------|--|-----------------------|-----------------------|------|
| V <sub>CC</sub> | Supply voltage                 |  | 2                     | 5.5                   | V    |

### 6.14 Typical Characteristics

### **7 Parameter Measurement Information**

NOTES: A. CL includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
  C. All input pulses are supplied by generators having the following characteristics: PRR ≤ 1 MHz, Z<sub>O</sub> = 50 Ω, t<sub>f</sub> ≤ 3 ns, t<sub>f</sub> ≤ 3 ns.
- D. The outputs are measured one at a time, with one input transition per measurement.
- E. tpLz and tpHz are the same as tdis.
- F. tpzL and tpzH are the same as ten.
- G. tPHL and tPLH are the same as tpd.
- H. All parameters and waveforms are not applicable to all devices.

#### Figure 7-1. Load Circuit and Voltage Waveforms

### 8 Detailed Description

#### 8.1 Overview

The SN74LV373A device is an octal transparent D-type latch designed for 2 V to 5.5 V  $V_{CC}$  operation.

When the latch-enable (LE) input is high, the Q outputs follow the data (D) inputs. When LE is taken low, the Q outputs are latched at the logic levels set up at the D inputs.

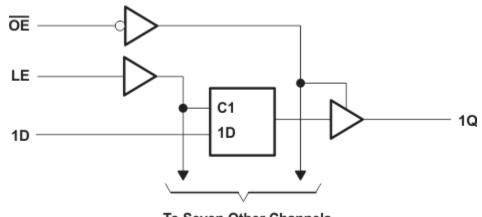

At power-up, the state of the Q outputs are not predictable until the first valid clock.

A buffered output-enable ( $\overline{OE}$ ) input can be used to place the eight outputs in either a normal logic state (high or low) or the high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and increased drive provide the capability to drive bus lines without need for interface or pull-up components.

OE does not affect the internal operations of the latches. Old data can be retained or new data can be entered while the outputs are in the high-impedance state.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to V<sub>CC</sub> through a pull-up resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

#### 8.2 Functional Block Diagram

### To Seven Other Channels

#### 8.3 Feature Description

- Wide operating voltage range
  - Operates from 2 V to 5.5 V
- Allows down-voltage translation
- Inputs accept voltages to 5.5 V
- Slow edges reduce output ringing

#### 8.4 Device Functional Modes

Table 8-1 shows the functional modes of SN74LV373A.

#### Application and Implementation

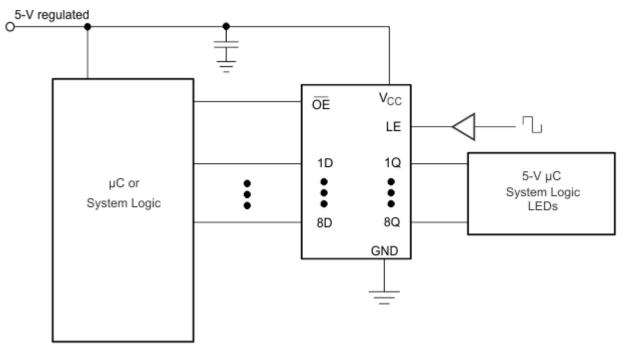

#### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The SN74LV540A device is a low-drive CMOS device that can be used for a multitude of bus interface type applications where putput ringing is a concern. The low drive and slow edge rates will minimize overshoot and undershoot on the outputs. The inputs are tolerant to 5.5 V at any valid  $V_{CC}$ . This feature makes it Ideal for translating down to the  $V_{CC}$  level. Figure 9-2 shows the reduction in ringing compared to higher drive parts such as AC.

#### 9.2 Typical Application

#### 9.2.1 Design Requirements

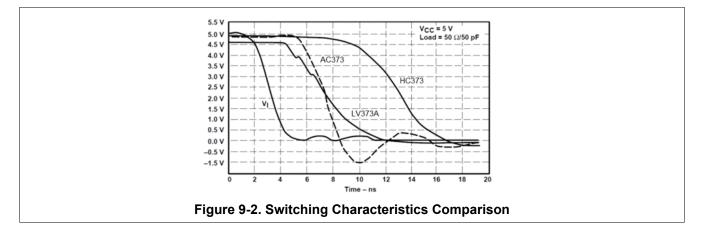

This device uses CMOS technology and has balanced output drive. Care should be taken to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads, so routing and load conditions should be considered to prevent ringing.

#### 9.2.2 Detailed Design Procedure

- 1. Recommended Input Conditions
  - For rise time and fall time specifications, see  $\Delta t/\Delta V$  in the Section 6.3 table.
  - For specified High and low levels, see V<sub>IH</sub> and V<sub>IL</sub> in the Section 6.3 table.
  - Inputs are overvoltage tolerant allowing them to go as high as 5.5 V at any valid  $V_{CC}$ .
- 2. Recommend Output Conditions
  - Load currents should not exceed 35 mA per output and 70 mA total for the part.
  - Outputs should not be pulled above V<sub>CC</sub>.

#### 9.2.3 Application Curves

### **Power Supply Recommendations**

The power supply can be any voltage between the MIN and MAX supply voltage rating located in the Section 6.3 table.

Each V<sub>CC</sub> pin should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, 0.1  $\mu$ F is recommended. If there are multiple V<sub>CC</sub> pins, 0.01  $\mu$ F or 0.022  $\mu$ F is recommended for each power pin. It is acceptable to parallel multiple bypass caps to reject different frequencies of noise. A 0.1  $\mu$ F and 1  $\mu$ F are commonly used in parallel. The bypass capacitor should be installed as close to the power pin as possible for best results.

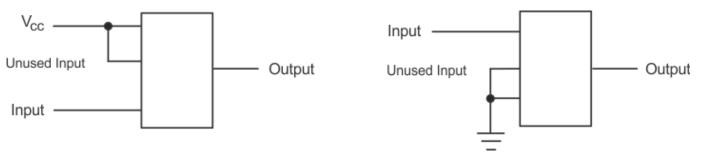

### 9 Layout

### 9.1 Layout Guidelines

When using multiple bit logic devices, inputs should not float. In many cases, functions or parts of functions of digital logic devices are unused. Some examples are when only two inputs of a triple-input AND gate are used, or when only 3 of the 4-buffer gates are used. Such input pins should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states.

Specified in Figure 9-1 are rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that should be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or  $V_{CC}$ , whichever makes more sense or is more convenient. It is acceptable to float outputs unless the part is a transceiver. If the transceiver has an output enable pin, it will disable the outputs section of the part when asserted. This will not disable the input section of the I/Os so they also cannot float when disabled.

### 9.2 Layout Example

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW**: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M. 2. This drawing is subject to change without notice. 3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not
- exceed 0.15 mm per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
- 5. Reference JEDEC registration MO-153.

## PW0020A

# **EXAMPLE BOARD LAYOUT**

## TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

## PW0020A
