

OCTAL BUS TRANSCEIVER

The TC74LVQ245 is a high speed CMOS OCTAL BUS TRANSCEIVER fabricated with silicon gate and double-layer metal wiring C²MOS technology.

Designed for use in 3.3 Volt systems, they achieve high speed operation while maintaining the CMOS low power dissipation.

It is intended for two-way asynchronous communication between data busses. The direction of data transmission is determined by the level of the DIR input.

The enable input (\bar{G}) can be used to disable the device so that the busses are effectively isolated.

All inputs are equipped with protection circuits against static discharge or transient excess voltage.

FEATURES

- High speed : $t_{pd} = 5.8\text{ns}$ (Typ.) ($V_{CC} = 3.3\text{V}$)
- Low power dissipation : $I_{CC} = 4\mu\text{A}$ (Max.) ($T_a = 25^\circ\text{C}$)
- Input voltage level : $V_{IL} = 0.8\text{V}$ (Max.) ($V_{CC} = 3\text{V}$)
 $V_{IH} = 2.0\text{V}$ (Min.) ($V_{CC} = 3\text{V}$)
- Symmetrical output impedance : $|I_{OH}| = I_{OL} = 12\text{mA}$ (Min.)
- Balanced propagation delays : $t_{pLH} \approx t_{pHL}$
- Pin and function compatible with 74HC245

APPLICATION NOTES

Do not apply a signal to any bus terminal when it is in the output mode. Damage may result.

All floating (high impedance) bus terminals must have their input levels fixed by means of pull up or pull down resistors.

No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property.

In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

Power Dissipation Capacitance	C_{pD}	(Note 3)		—	38	—	—	—	pF

(Note 1) Parameter guaranteed by design.

$$(t_{osLH} = |t_{pLHm} - t_{pLHn}|, t_{osHL} = |t_{pHLm} - t_{pHLn}|)$$

(Note 2) Parameter guaranteed by design.

(Note 3) C_{pD} is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption.

Average operating current can be obtained by the equation :

$$I_{CC}(\text{opr.}) = C_{pD} \cdot V_{CC} \cdot f_{IN} + I_{CC}/8 \text{ (per bit)}$$

Noise characteristics ($T_a = 25^\circ\text{C}$, Input $t_r = t_f = 3\text{ns}$, $C_L = 50\text{pF}$, $R_L = 500\Omega$)
