

MOTOROLA

Quad 2-Input Data Selector/Multiplexer with Enable

ELECTRICALLY TESTED PER:

MIL-M-38510/30903

The LSTTL/MSI 54LS157 is a high-speed Quad 2-Input Multiplexer. Four bits of data from two sources can be selected using the common Select and Enable inputs. The four buffered outputs preset the selected data in the true (non-inverted) form. The 'LS157 can also be used to generate any four of the 16 different functions of two variables. The 'LS157 is fabricated with the Schottky barrier diode process for high speed and is completely compatible with all Motorola TTL families.

- Schottky Process For High-Speed
- Multifunction Capability
- Non-Inverting Outputs
- Input Clamp Diodes Limit High-Speed Termination Effects

Military 54LS157

AVAILABLE AS:

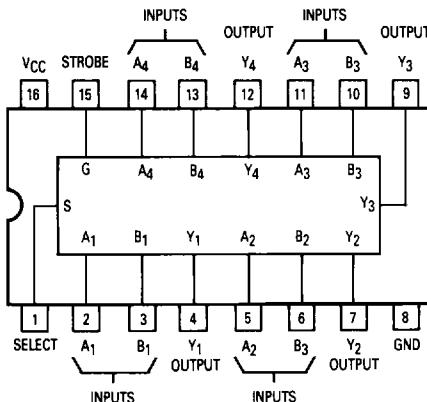

- 1) JAN: JM38510/30903BXA
- 2) SMD: 7600201
- 3) 883C: 54LS157/BXAJC

FUNCTIONAL DESCRIPTION

The 'LS157 is a Quad 2-Input Multiplexer fabricated with the Schottky barrier diode process for high speed. It selects four bits of data from two sources under the control of a common Select Input (S). The Enable Input (G) is Active LOW. When G is HIGH, all of the outputs (Y) are forced LOW regardless of all other inputs.

The 'LS157 is the logic implementation of a 4-pole, 2-position switch where the position of the switch is determined by the logic levels supplied to the Select Input. The logic equations for the outputs are shown below:

$$\begin{aligned} Y_1 &= G \cdot (A_1 \cdot S + B_1 \cdot \bar{S}) & Y_2 &= G \cdot (A_2 \cdot S + B_2 \cdot \bar{S}) \\ Y_3 &= G \cdot (A_3 \cdot S + B_3 \cdot \bar{S}) & Y_4 &= G \cdot (A_4 \cdot S + B_4 \cdot \bar{S}) \end{aligned}$$

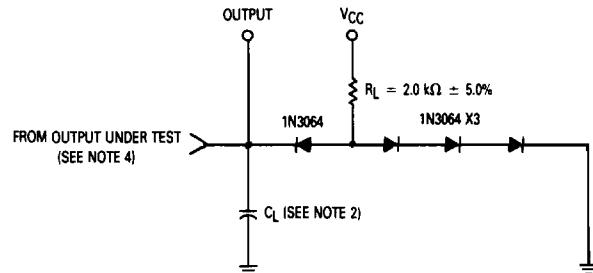

A common use of the 'LS157 is the moving of data from two groups of registers to four common output busses. The particular register from which the data comes is determined by the state of the Select Input. A less obvious use is as a function generator. The 'LS157 can generate any four of the 16 different functions of two variables with one variable common. This is useful for implementing highly irregular logic.

Pin Names	Loading (Note a)	
	HIGH	LOW
S Common Select Input	1.0 U.L.	0.5 U.L.
G Enable (Active LOW) Input	1.0 U.L.	0.5 U.L.
A ₁ -A ₄ Data Inputs from Source 0	0.5 U.L.	0.25 U.L.
B ₁ -B ₄ Data Inputs from Source 1	0.5 U.L.	0.25 U.L.
Y ₁ -Y ₄ Multiplexer Outputs (Note b)	10 U.L.	5(2.5) U.L.

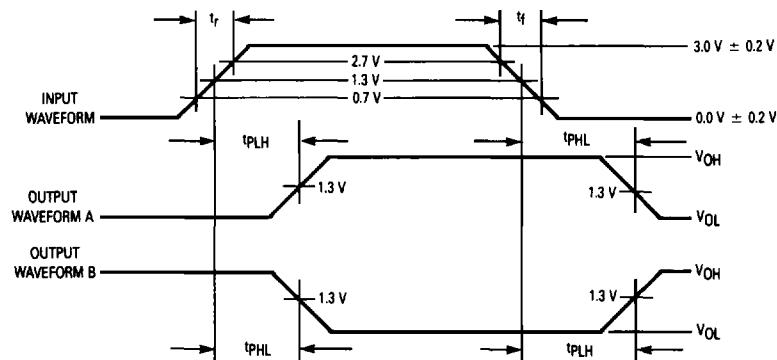

NOTES:

- a. One TTL Unit Load (U.L.) = 40 μ A HIGH/1.6 mA LOW.
- b. The Output LOW drive factor is 2.5 U.L. for Military (54) Temperature Ranges.

AC TEST CIRCUIT

WAVEFORMS

NOTES:

1. Input pulse generator has the following characteristics:
 $t_r \leq 15$ ns, $t_f \leq 6.0$ ns, PRR ≤ 1.0 MHz.
2. $C_L = 50$ pF $\pm 10\%$, including scope probe and jig capacitance.
3. $R_L = 2.0$ k Ω $\pm 5.0\%$. All diodes are 1N3064 or 1N916.
4. Load circuit on a given output is only required where the specific test table 1 indicates "OUT" on that output.
5. Voltage measurements are to be made with respect to network ground terminal.
