

STRUCTURE Silicon Monolithic Integrated Circuit

PRODUCT CMOS Type series regulator

TYPE **BH□□NB1WHFV Series**

○BLOCK DIAGRAM and APPLICATION CIRCUIT

Fig.1 BLOCK DIAGRAM and APPLICATION CIRCUIT

○PIN DESCRIPTION

| PIN No. | PIN NAME | DESCRIPTION |
|---------|----------|----------------------------------|
| 1 | STBY | OUTPUT CONTROL(High:ON, Low:OFF) |
| 2 | GND | GROUND Pin |
| 3 | VIN | INPUT Pin |
| 4 | VOUT | OUTPUT Pin |
| 5 | NC | NO CONNECT |

○ABSOLUTE MAXIMUM RATINGS (Ta=25°C)

| PARAMETER | Symbol | Limit | Unit |
|-----------------------------|--------|--------------|------|
| Power Supply Voltage | VMAX | -0.3 ~ +6.5 | V |
| Power Dissipation | Pd | 410 (Note.1) | mW |
| Operating Temperature Range | Topr | -40 ~ +85 | °C |
| Storage Temperature Range | Tstg | -55 ~ +125 | °C |

Note.1 Pd derated at 4.1mW/°C for temperature above Ta=25°C, mounted on 70mm×70mm×1.6mm glass-epoxy PCB.

Application example

The application circuit is recommended for use. Make sure to confirm the adequacy of the characteristics.

When using the circuit with changes to the external circuit constants, make sure to leave an adequate margin for external components including static and transitional characteristics as well as dispersion of the IC.

Note that ROHM cannot provide adequate confirmation of patents.

The product described in this specification is designed to be used with ordinary electronic equipment or devices (such as audio-visual equipment, office-automation equipment, communications devices, electrical appliances, and electronic toys).

Should you intend to use this product with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

ROHM assumes no responsibility for use of any circuits described herein, conveys no license under any patent or other right, and makes no representations that the circuits are free from patent infringement.

○ RECOMMENDED OPERATING RANGE

| PARAMETER | Symbol | Limit | Unit |
|----------------------|--------|---------|------|
| Power Supply Voltage | VIN | 2.5~5.5 | V |
| Output Max Current | IMAX | 150 | mA |

○ ELECTRICAL CHARACTERISTICS

(Ta=25°C, VIN=VOUT+1.0V, STBY=1.5V, Cin=0.1 μF, Co=2.2 μF, unless otherwise noted.)

| PARAMETER | Symbol | Limit | | | Unit | Conditions |
|-----------------------------------|--------|-----------|------|-----------|------|----------------------------------|
| | | MIN. | TYP. | MAX. | | |
| 【Regulator】 | | | | | | |
| Output Voltage | VOUT | VOUT×0.99 | VOUT | VOUT×1.01 | V | IOUT=1mA |
| Circuit Current | IGND | - | 60 | 100 | μA | IOUT=50mA |
| Circuit Current (STBY) | ISTBY | - | - | 1.0 | μA | STBY=0V |
| Ripple Rejection Ratio | RR | - | 80 | - | dB | VRR=-20dBv, fRR=1kHz, IOUT=10mA |
| Load Response 1 | LTV1 | - | 25 | - | mV | IOUT=1mA to 30mA |
| Load Response 2 | LTV2 | - | 25 | - | mV | IOUT=30mA to 1mA |
| Input output Voltage difference 1 | VSAT1 | - | 80 | 150 | mV | VIN=0.98×VOUT, IOUT=30mA |
| Input output Voltage difference 2 | VSAT2 | - | 250 | 450 | mV | VIN=0.98×VOUT, IOUT=100mA |
| Line Regulation | VDLI | - | 1 | 20 | mV | VIN=VOUT+0.5V to 5.5V, IOUT=50mA |
| Load Regulation 1 | VDL01 | - | 6 | 30 | mV | IOUT=1mA to 100mA |
| Load Regulation 2 | VDL02 | - | 9 | 90 | mV | IOUT=1mA to 150mA |
| 【Over Current Protection】 | | | | | | |
| Limit Current | ILMAX | - | 250 | - | mA | Vo=VOUT×0.98 |
| Short Current | ISHORT | - | 50 | - | mA | Vo=0V |
| 【Stand-by block】 | | | | | | |
| STBY Pull-down Resistor | RSTB | 275 | 550 | 1100 | kΩ | |
| STBY Control Voltage | ON | VSTBH | 1.5 | - | VCC | V |
| | OFF | VSTBL | -0.3 | - | 0.3 | V |

● This product is not designed for protection against radio active rays.

○ RECOMMENDED OPERATING CONDITION

| PARAMETER | Symbol | MIN. | TYP. | MAX. | Unit | CONDITION |
|------------------|--------|------|------|------|------|-------------------------------|
| Input Capacitor | Cin | 0.1 | - | - | μF | Ceramic capacitor recommended |
| Output Capacitor | Co | 2.2 | - | - | μF | Ceramic capacitor recommended |

○ TEST CIRCUIT

○Operation Notes

- 1.) Absolute maximum ratings

May be destroyed if it is operated beyond its absolute maximum ratings. If the device is destroyed in exceeding the recommended maximum ratings, the failure mode will be difficult to determine. (E.g. short mode, open mode) Therefore, physical protection counter-measures (like fuse) should be implemented when operating conditions are beyond the absolute maximum ratings specified.
- 2.) GND potential

GND potential must be the lowest potential no matter what may happen. Actually, including transitional states, all pins except GND must not be the voltage below GND.
- 3.) Setting of heat

Consider Pd of actually using states, carry out the heat design that have adequate margin.
- 4.) Pin short and mistake fitting

When mounting the IC on the PCB, pay attention to the orientation of the IC. If there is a placement mistake, the IC may be burned up.
- 5.) Actions in strong magnetic field

Using the IC within a strong magnetic field may cause a malfunction.
- 6.) Mutual impedance

Use short and wide wiring tracks for the power supply and ground to keep the mutual impedance as small as possible. Use a capacitor to keep ripple to a minimum.
- 7.) Voltage of STB pin

For standby mode, set STB voltage below 0.3V. For normal operation, set the pin voltage beyond 1.2V. It is not recommended to set STB voltage between 0.3V and 1.5V, and it may cause improper operation.
- 8.) Over current protection circuit

Over current and short circuit protection is built-in at the output, and IC destruction is prevented at the time of load short circuit. These protection circuits is effective in the destructive prevention by the sudden accident, please avoid use to which a protection circuit operates continuously.
- 9.) Thermal shutdown

In cases of operation at high temperature, thermal shut-down will be activated and output will be turned off. Once IC is returned on normal operating temperature, the output will be turned back on.
- 10.) Output capacitor

To prevent oscillation at output, it is recommended that the IC be operated at the stable region show as Fig.5. It is recommended that the IC operated at the capacitor of more than 2.2 μ F, and also ESR=500m Ω below.

As capacitance is larger, stability becomes more stable and characteristic of output load fluctuation is also improved.

Fig.5 Stable region (Example)

Notes

- No technical content pages of this document may be reproduced in any form or transmitted by any means without prior permission of ROHM CO.,LTD.
- The contents described herein are subject to change without notice. The specifications for the product described in this document are for reference only. Upon actual use, therefore, please request that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or otherwise dispose of the same, no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.

Thank you for your accessing to ROHM product informations.
