

**3.3V 8-Bit Bi-Directional Transceiver  
with 3-State Outputs**
**Product Features**

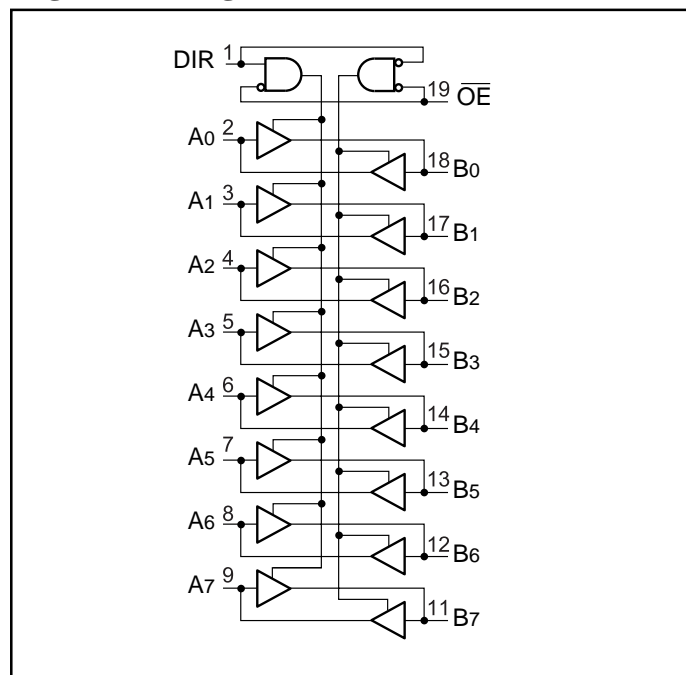

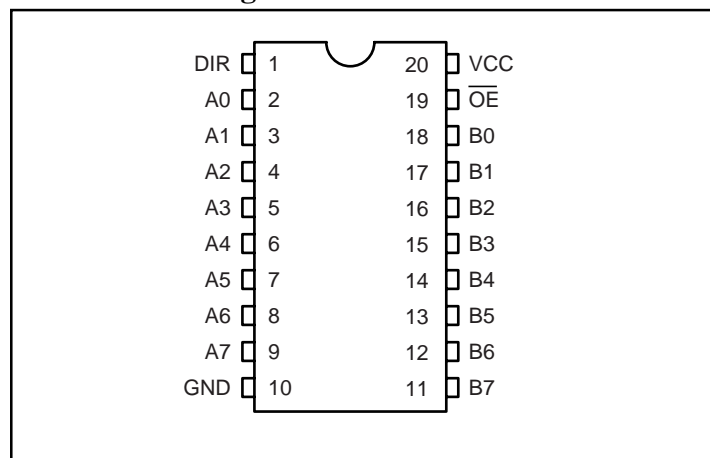

- Advanced low power CMOS design for 2.7V to 3.6V  $V_{CC}$  operation
- Supports 5V input/output tolerance in mixed signal mode operation
- Function compatible with LVT family of products
- Balanced  $\pm 24\text{mA}$  output drive
- Typical  $V_{OLP}$  (Output Ground Bounce)  $< 0.8\text{V}$  at  $V_{CC}=3.3\text{V}$ ,  $T_A=25^\circ\text{C}$
- $I_{off}$  and Power Up/Down 3-State support live insertion
- Latch-up performance exceeds 200mA Per JESD78
- ESD protection exceeds JESD 22
  - 2000V Human-Body Model (A114-B)
  - 200V Machine Model (A115-A)
- Packages (Pb-free available):
  - 20-pin 209-mil wide plastic SSOP (H)
  - 20-pin 173-mil wide plastic TSSOP (L)
  - 20-pin 300-mil wide plastic SOIC (S)

**Product Description**

The PI74LVTC245 is a non-inverting 8-bit Bidirectional Transceiver designed for low-voltage 2.7V to 3.6V  $V_{CC}$  operation, with the capability of interfacing to the 5V system environment. This transceiver is designed for asynchronous two-way communication between data buses. The direction control input pin (DIR) determines the direction of the dataflow from the A bus to the B bus or from the B bus to the A bus. The output enable ( $\overline{OE}$ ) input, when HIGH, disables both A and B ports by placing them in HIGH Z condition.

When  $V_{cc}$  is between 0 to 1.5V during power up or power down, the outputs of the device are in the high-impedance state. To ensure the high-impedance state above 1.5V,  $\overline{OE}$  should be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current sinking capability of the driver.

The device fully supports live-insertion with its  $I_{off}$  and power-up/down 3-state. The  $I_{off}$  circuitry disables the outputs when the power is off, preventing the backflow of damaging current through the device. Power-up/down 3-state places the outputs in the high-impedance state during power up or power down, preventing driver conflict.

**Maximum Ratings**

(Above which the useful life may be impaired.  
For user guidelines, not tested.)

|   |                                |
|---|--------------------------------|
| Supply voltage range, $V_{CC}$ .....  | -0.5V to +6.5V                 |
| Input voltage range, $V_I^{(1)}$ .....  | -0.5V to +6.5V                 |
| Voltage range applied to any output in the high-impedance or power-off state, $V_O^{(1)}$ ..... | -0.5V to +6.5V                 |
| Voltage range applied to any output in the active state, $V_O^{(1,2)}$ .....                    | -0.5V to $V_{CC}+0.5V$         |
| Input clamp current, $I_{IK} (V_I < 0)$ .....   | -50mA                          |
| Output clamp current, $I_{OK} (V_O < 0)$ .....  | -50mA                          |
| Continuous Output Current $I_O$ .....   | $\pm 50mA$                     |
| Continuous Current through each $V_{CC}$ or GND pin .....                                       | $\pm 100mA$                    |
| Package thermal impedance, $\theta_{JA}^{(3)}$ : package H .....                                | $81^\circ C/W$                 |
| package L .....   | $84^\circ C/W$                 |
| package S .....   | $84^\circ C/W$                 |
| Storage Temperature range, $T_{stg}$ .....  | $-65^\circ C$ to $150^\circ C$ |

**Product Pin Description**

| Pin Name        | Description                               |
|-----------------|---|
| $\overline{OE}$ | 3-State Output Enable Inputs (Active LOW) |
| DIR             | Direction Control Input                   |
| xAx             | Side A Inputs or 3-State Outputs          |
| xBx             | Side B Inputs or 3-State Outputs          |
| GND             | Ground                                    |
| $V_{CC}$        | Power                                     |

**Notes:**

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

1. Input negative-voltage and output voltage ratings may be exceeded if the input and output clamp current ratings are observed.
2. This value is limited to 6.5 maximum
3. The package thermal impedance is calculated in accordance with JESD 51.

**Truth Table<sup>(1)</sup>**

| Inputs          |     | Outputs             |
|-----------------|-----|---------------------|
| $\overline{OE}$ | DIR |                     |
| L               | L   | Bus B Data to Bus A |
| L               | H   | Bus A Data to Bus B |
| H               | X   | Z                   |

**Notes:**

1. H = High Signal Level  
L = Low Signal Level  
X = Don't Care or Irrelevant  
Z = High Impedance

| $I_{OFF}$          | Power Off Output Leakage Current |                             | $V_{CC} = 0\text{V}$                    | $V_I$ or $V_O = 0\text{V}$ to $5.5\text{V}$   |                        | $\pm 5$ |               |
| $I_{OZPU}$         | Power-Up 3-State Current         |                             | $V_{CC} = 0\text{V}$ to $1.5\text{V}$   | $V_O = 0.5\text{V}$ to $5.5\text{V}$ ,<br>$\overline{OE} = \text{don't care}$           |                        | $\pm 5$ |               |
| $I_{OZPD}$         | Power-Down 3-State Current       |                             | $V_{CC} = 1.5\text{V}$ to $0\text{V}$   | $V_O = 0.5\text{V}$ to $5.5\text{V}$ ,<br>$\overline{OE} = \text{don't care}$           |                        | $\pm 5$ |               |
| $I_{CC}$           | Quiescent Power Supply Current   |                             | $V_{CC} = 2.7\text{V}$ to $3.6\text{V}$ | $V_I = V_{CC}$ or $\text{GND}$  | $I_O = 0$              | 100     |               |
|                    |                                  |                             |   | $3.6\text{V} \leq V_I \leq 5.5\text{V}^{(2)}$   |                        |         |               |
| $\Delta I_{CC}$    | Increase in $I_{CC}$             |                             | $V_{CC} = 3.0\text{V}$ to $3.6\text{V}$ | One input at $V_{CC} - 0.6\text{V}^{(3)}$ ,<br>Other inputs at $V_{CC}$ or $\text{GND}$ |                        | 500     |               |

**Notes:**

1. For I/O ports, Input Leakage Current ( $I_I$ ) includes the 3-state Output Leakage Current. Unused pins are at  $V_{CC}$  or  $\text{GND}$ .
2. This applies in the disabled state only.
3. This is the increase in supply current for each input that is at the specified TTL voltage level rather than  $V_{CC}$  or  $\text{GND}$ .

### Capacitance

| Parameters      | Description                                  | Test Conditions  | Typ. <sup>(1)</sup> | Units |
|-----------------|--|--|---------------------|-------|
| C <sub>IN</sub> | Control Input Capacitance                    | V <sub>CC</sub> = 3.3V, V <sub>I</sub> = V <sub>CC</sub> or GND          | 3.3                 | pF    |
| C <sub>IO</sub> | Input/Output Capacitance                     | V <sub>CC</sub> = 3.3V, V <sub>O</sub> = V <sub>CC</sub> or GND          | 7.8                 |       |
| C <sub>PD</sub> | Power Dissipation Capacitance <sup>(2)</sup> | V <sub>CC</sub> = 3.3V, V <sub>I</sub> = 0 or V <sub>CC</sub> , f=10 MHz | 33                  |       |

**Notes:**

- All typical values are measured at V<sub>CC</sub> = 3.3V, T<sub>A</sub> = 25°C.
- C<sub>PD</sub> is defined as the value of the internal equivalent capacitance which is derived from dynamic operating current consumption (I<sub>CCD</sub>) at no output loading and operating at 50% duty cycle, C<sub>PD</sub> is related to I<sub>CCD</sub> dynamic operating current by the expression: I<sub>CCD</sub> = (C<sub>PD</sub>)(V<sub>CC</sub>)(f<sub>IN</sub>)+(I<sub>CCstatic</sub>).

### Switching Characteristics Over Operating Range

| Parameters         | Description                          | From (Input)    | To (Output) | V <sub>CC</sub> = 3.3V ±0.3V                   |      | V <sub>CC</sub> = 2.7V                         |      | Units |

| t <sub>PZH</sub>   | Output Enable Time                   | $\overline{OE}$ | A or B      | 1.0  | 7.0  | 1.0  | 7.9  |       |
| t <sub>PZL</sub>   |                                      |                 |             | 1.0  | 7.0  | 1.0  | 7.9  |       |
| t <sub>PHZ</sub>   | Output Disable Time                  | $\overline{OE}$ | A or B      | 1.0  | 5.4  | 1.0  | 5.8  |       |
| t <sub>PLZ</sub>   |                                      |                 |             | 1.0  | 5.4  | 1.0  | 5.8  |       |
| t <sub>SK(O)</sub> | Output to Output Skew <sup>(1)</sup> |                 |             |  | 0.5  |  |      |       |

**Notes:**

- Skew between any two outputs, switching in the same direction.

**PARAMETER MEASUREMENT INFORMATION**

$V_{CC} = 2.7V \text{ and } 3.3V \pm 0.3V$

| Test              | S1   |
|-------------------|------|
| $t_{PLH}/t_{PHL}$ | Open |
| $t_{PLZ}/t_{PZL}$ | 6V   |
| $t_{PHZ}/t_{PZH}$ | GND  |

**Load Circuit**

**Voltage Waveforms  
Pulse Duration**

**Voltage Waveforms  
Propagation Delay Times**

**Voltage Waveforms  
Enable and Disable Times**

**Figure 1. Load Circuit and Voltage Waveforms**

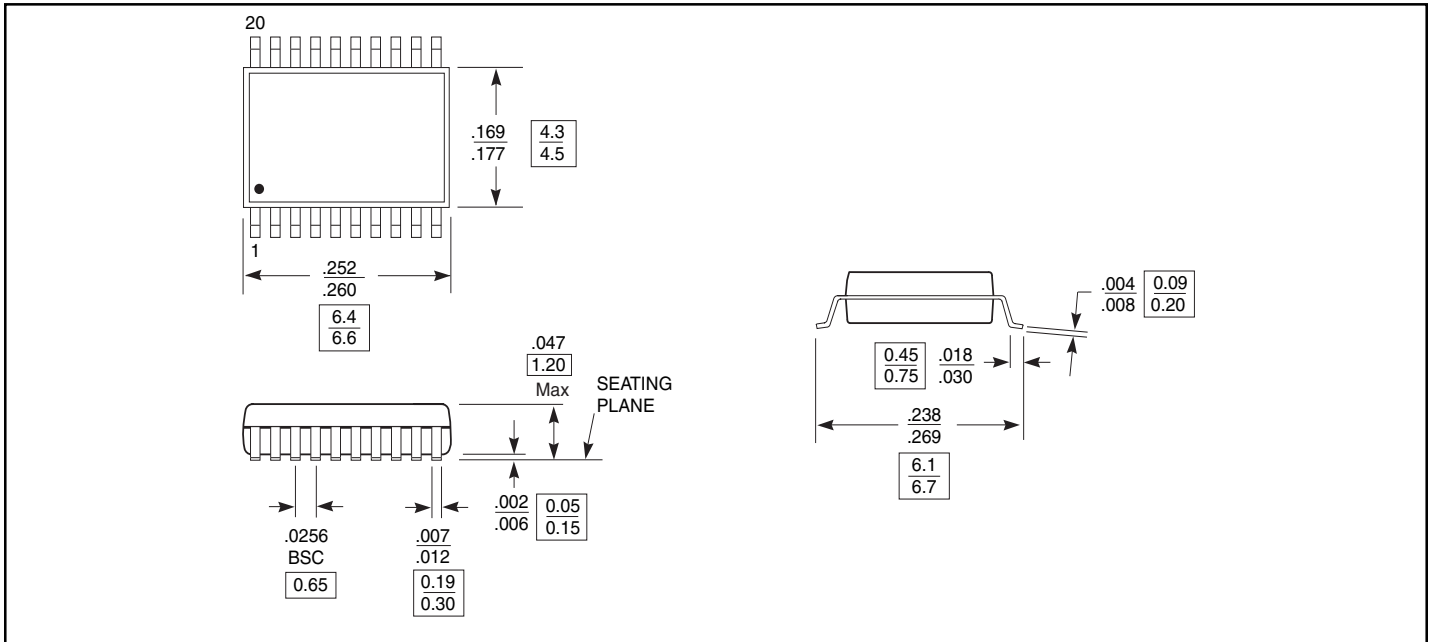

**Notes:**

- A.  $C_L$  includes probe and jig capacitance.
- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- All input impulses are supplied by generators having the following characteristics:  $PRR \leq 10 \text{ MHz}$ ,  $Z_O = 50\text{ohm}$ ,  $t_R \leq 2.5\text{ns}$ ,  $t_F \leq 2.5\text{ns}$ .
- The outputs are measured one at a time with one transition per measurement.

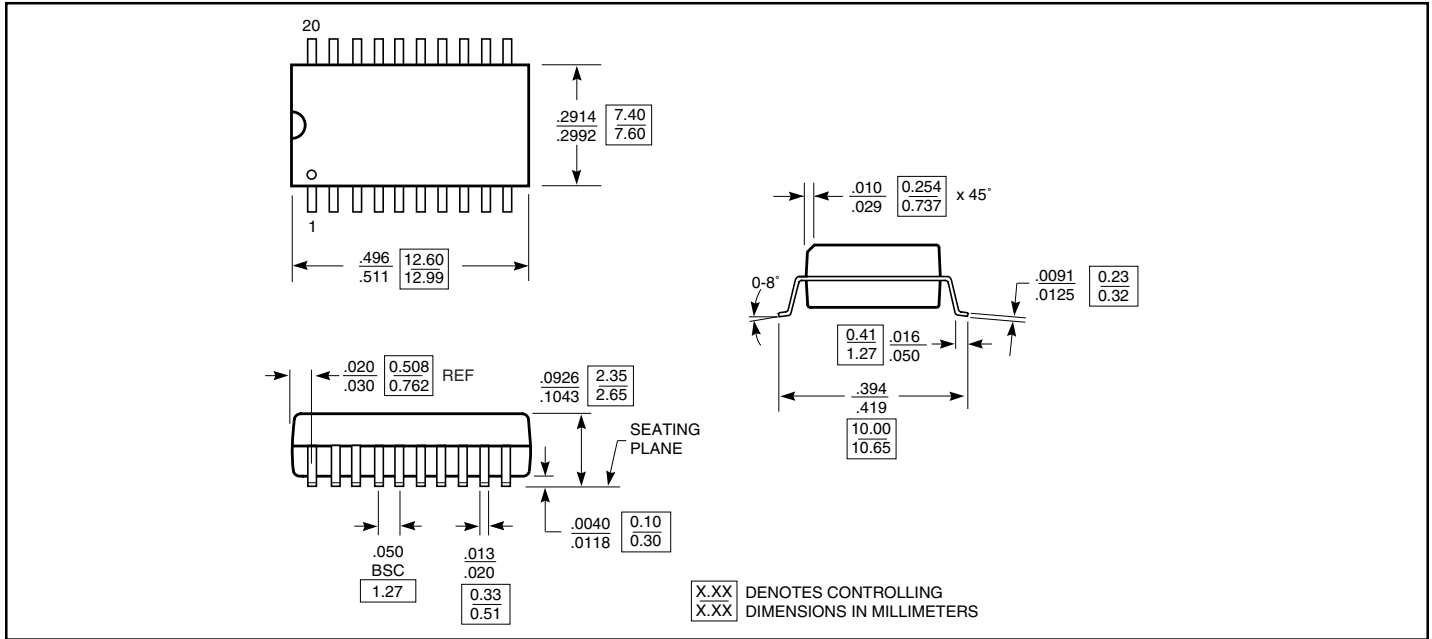

**Packaging Mechanical: 20-pin SSOP (H)**

**Packaging Mechanical: 20-pin TSSOP (L)**

**Packaging Mechanical: 20-pin SOIC (S)**

**Ordering Information**

| Ordering Code | Packaging Code | Description                        |
|---------------|----------------|------------------------------------|
| PI74LVTC245H  | H              | 20-pin, 209-mil wide plastic SSOP  |
| PI74LVTC245L  | L              | 20-pin, 173-mil wide plastic TSSOP |
| PI74LVTC245S  | S              | 20-pin, 300-mil wide plastic SOIC  |

**Notes:**

- Thermal characteristics can be found on the company web site at [www.pericom.com/packaging/](http://www.pericom.com/packaging/)
- Adding an X suffix = Tape/Reel
