

FEATURES/BENEFITS

- 5V tolerant inputs and outputs
- Bus Hold feature holds last active state during 3-state operation
- $10\mu A$ I_{CCQ} quiescent power supply current
- Hot insertable
- 2.0V–3.6V V_{CC} supply operation
- $\pm 24mA$ balanced output drive
- Power down high impedance inputs and outputs
- $t_{PD} = 6.6ns$ max.
- Input hysteresis for noise immunity
- Meets or exceeds JEDEC Standard 36 specifications
- Multiple power and ground pins for low noise
- Operating temperature range:
 $-40^{\circ}C$ to $85^{\circ}C$
- Latch-up performance exceeds 500mA
- ESD performance:
 - Human body model > 2000V
 - Machine model > 200V
- Packages available:
 - 56-pin TSSOP
 - 56-pin SSOP

DESCRIPTION

The LVCH16952A is a 16-bit bus register transceiver with three-state outputs that is ideal for driving address and data buses. Two independent 8-bit registered transceivers are used to permit independent control of data flow in either direction. The QS74LVCH16952A provides Bus Hold circuitry on the data inputs to retain the last active state during 3-state operation, eliminating the need for external pull-up resistors. The 3.3V LVC family features low power, low switching noise, and fast switching speeds for low power portable applications as well as high-end advanced workstation applications. 5V tolerant inputs and outputs allow this LVC product to be used in mixed 5V and 3.3V systems. Easy board layout is facilitated by the use of flow-through pinouts and byte enable controls provide architectural flexibility for systems designers. To accommodate hot-plug or live insertion applications, this product is designed not to load an active bus when V_{CC} is removed. However, during power up or power down sequence, \overline{OE} should be tied to V_{CC} to ensure high-impedance state on the outputs.
