

## DUAL D-TYPE FLIP-FLOP

The HEF4013B is a dual D-type flip-flop which features independent set direct ( $S_D$ ), clear direct ( $C_D$ ), clock inputs (CP) and outputs ( $O, \bar{O}$ ). Data is accepted when CP is LOW and transferred to the output on the positive-going edge of the clock. The active HIGH asynchronous clear-direct ( $C_D$ ) and set-direct ( $S_D$ ) are independent and override the D or CP inputs. The outputs are buffered for best system performance. Schmitt-trigger action in the clock input makes the circuit highly tolerant to slower clock rise and fall times.

Fig. 1 Functional diagram.

Fig. 2 Pinning diagram.

### FUNCTION TABLES

| inputs |       |    |   | outputs |           |
|--------|-------|----|---|---------|-----------|
| $S_D$  | $C_D$ | CP | D | O       | $\bar{O}$ |
| H      | L     | X  | X | H       | L         |
| L      | H     | X  | X | L       | H         |
| H      | H     | X  | X | H       | H         |

| inputs |       |    |   | outputs   |                 |
|--------|-------|----|---|-----------|-----------------|
| $S_D$  | $C_D$ | CP | D | $O_{n+1}$ | $\bar{O}_{n+1}$ |
| L      | L     | /  | L | L         | H               |
| L      | L     | /  | H | H         | L               |

- H = HIGH state (the more positive voltage)
- L = LOW state (the less positive voltage)
- X = state is immaterial
- / = positive-going transition
- $O_{n+1}$  = state after clock positive transition

### PINNING

- D data inputs
- CP clock input (L to H edge-triggered)
- $S_D$  asynchronous set-direct input (active HIGH)
- $C_D$  asynchronous clear-direct input (active HIGH)
- O true output
- $\bar{O}$  complement output
