

FEATURES

- ESD Protection for RS-232 Bus Pins
– ± 15 -kV Human-Body Model (HBM)
- Meets or Exceeds the Requirements of TIA/EIA-232-F and ITU v.28 Standards
- Operates at 5-V V_{CC} Supply
- Four Drivers and Five Receivers
- Operates up to 120 kbit/s
- Low Supply Current in Shutdown Mode . . . 15 μ A Typ
- External Capacitors . . . 4×0.1 F
- Designed to Be Interchangeable With Maxim MAX213
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II

DB, DW, OR PW PACKAGE
(TOP VIEW)

APPLICATIONS

- Battery-Powered Systems
- PDAs
- Notebooks
- Laptops
- Palmtop PCs
- Hand-Held Equipment

DESCRIPTION/ ORDER INFORMATION

The MAX213 device consists of four line drivers, five line receivers, and a dual charge-pump circuit with ± 15 -kV ESD protection pin to pin (serial-port connection pins, including GND). The device meets the requirements of TIA/EIA-232-F and provides the electrical interface between an asynchronous communication controller and the serial-port connector. The charge pump and four small external capacitors allow operation from a single 5-V supply. The devices operate at data signaling rates up to 120 kbit/s and a maximum of 30-V/ μ s driver output slew rate.

The MAX213 has an active-low shutdown ($\overline{\text{SHDN}}$) and an active-high enable control (EN). In shutdown mode, the charge pumps are turned off, V+ is pulled down to V_{CC} , V- is pulled to GND, and the transmitter outputs are disabled. This reduces supply current typically to 1 μ A. Two receivers of the MAX213 are active during shutdown.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

MAX213
5-V MULTICHANNEL RS-232 LINE DRIVER/RECEIVER
WITH ± 15 -kV ESD PROTECTION

WITH ± 15 -kV ESD PROTECTION

SLLS680–DECEMBER 2005

Absolute Maximum Ratings⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V _{CC}	Supply voltage range	-0.3	6	V
V+	Positive charge-pump voltage range ⁽²⁾	V _{CC} - 0.3	14	V
V-	Negative charge-pump voltage range ⁽²⁾	0.3	-14	V
V _I	Input voltage range	Drivers	V+ + 0.3	V
		Receivers	±30	
V _O	Output voltage range	Drivers	V- - 0.3	V
		Receivers	-0.3	
DOUT	Short-circuit duration	Continuous		
θ _{JA}	Package thermal impedance ⁽³⁾⁽⁴⁾	DB package	62	C°/W
		DW package	46	
		PW package		
T _J	Operating virtual junction temperature		150	C°
T _{stg}	Storage temperature range	-65	150	C°

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to network GND.
- (3) Maximum power dissipation is a function of T_J(max), θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is P_D = (T_J(max) - T_A)/θ_{JA}. Operating at the absolute maximum T_J of 150°C can affect reliability.
- (4) The package thermal impedance is calculated in accordance with JESD 51-7.

Recommended Operating Conditions⁽¹⁾

PARAMETER	TEST CONDITIONS	MIN	TYP ⁽²⁾	MAX	UNIT
I _{CC}	Supply current No load, See Figure 6		14	20	mA
I _{SHDN}	Shutdown supply current T _A = 25°C, See Figure 1		15	50	μA

- (1) Test conditions are C1–C4 = 0.1 μF at V_{CC} = 5 V ± 0.5 V.
- (2) All typical values are at V_{CC} = 5 V, and T_A = 25°C.

DRIVER SECTION

Electrical Characteristics⁽¹⁾

over operating free-air temperature range (unless otherwise noted) (see Figure 4)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽²⁾	MAX	UNIT
V_{OH}	High-level output voltage	DOUT at $R_L = 3\text{ k}\Omega$ to GND	5	9		V
V_{OL}	Low-level output voltage	DOUT at $R_L = 3\text{ k}\Omega$ to GND	-5	-9		V
I_{IH}	Control high-level input current	EN, $\overline{\text{SHDN}} = 5\text{ V}$		3	10	μA
I_{IL}	Driver low-level input current	DIN = 0 V		-15	-200	μA
	Control low-level input current	EN, $\overline{\text{SHDN}} = 0\text{ V}$		-3	-10	
I_{OS} ⁽³⁾	Short-circuit output current	$V_{CC} = 5.5\text{ V}$, $V_O = 0\text{ V}$		± 10	± 60	mA
r_o	Output resistance	V_{CC} , $V+$, and $V- = 0\text{ V}$, $V_O = \pm 2\text{ V}$	300			Ω

(1) Test conditions are C1–C4 = 0.1 μF at $V_{CC} = 5\text{ V} \pm 0.5\text{ V}$

(2) All typical values are at $V_{CC} = 5\text{ V}$, and $T_A = 25^\circ\text{C}$.

(3) Short-circuit durations should be controlled to prevent exceeding the device absolute power dissipation ratings, and not more than one output should be shorted at a time.

Switching Characteristics⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽²⁾	MAX	UNIT
	Maximum data rate	$C_L = 50\text{ pF}$ to 1000 pF, One DO $\overline{\text{U}}$ T switching, $R_L = 3\text{ k}\Omega$ to 7 k Ω , See Figure 3	120			kbit/s
$t_{PLH(D)}$	Propagation delay time, low- to high-level output	$C_L = 2500\text{ pF}$, All drivers loaded, $R_L = 3\text{ k}\Omega$, See Figure 3		2		μs
$t_{PHL(D)}$	Propagation delay time, high- to low-level output	$C_L = 2500\text{ pF}$, All drivers loaded, $R_L = 3\text{ k}\Omega$, See Figure 3		2		μs
$t_{sk(p)}$	Pulse skew ⁽³⁾	$C_L = 150\text{ pF}$ to 2500 pF, See Figure 3		300		ns
SR(tr)	Slew rate, transition region (see Figure 2)	$C_L = 50\text{ pF}$ to 1000 pF, $V_{CC} = 5\text{ V}$	3	6	30	V/ μs

(1) Test conditions are C1–C4 = 0.1 μF at $V_{CC} = 5\text{ V} \pm 0.5\text{ V}$.

(2) All typical values are at $V_{CC} = 5\text{ V}$, and $T_A = 25^\circ\text{C}$.

(3) Pulse skew is defined as ($t_{PLH} - t_{PHL}$) of each channel of the same device.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
