

2A Ultra Low Dropout Linear Regulator

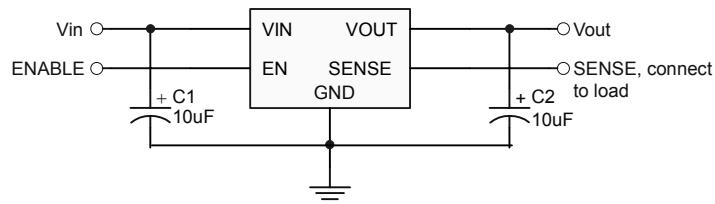

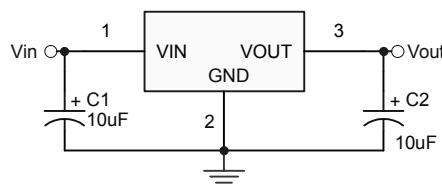

■ FEATURES

- Guaranteed 2A Output Current
- Low Ground Current
- $0.5\mu A$ Quiescent Current in Shutdown
- Fixed Output Voltage of 1.5V, 1.8V, 2.5V, 3.3V
- Fast Transient Response
- Current Limit and Thermal Limit
- Available in SOT-223, TO-220, TO-263
TO-263-5, TO-252 and TO-252-5 Packages

■ APPLICATIONS

- Mother Board and Notebook
- Gigabit Ethernet Switch
- Microprocessor Power Systems
- Network Cards
- Peripheral Cards
- GTL, GTL+, BTL, and SSTL Bus Terminators
- DSPs Power Supplies
- Battery Powered Applications

■ TYPICAL APPLICATION CIRCUIT

■ DESCRIPTION

The AIC1186 is an ultra low dropout and high performance linear regulator with 2A output current capability. The output voltage is fixed 1.5V, 1.8V, 2.5V and 3.3V. Its low dropout voltage and fast transient response make it ideal for low voltage microprocessor applications.

In addition, the enable pin reduces power dissipation at shutdown mode. Current limit and thermal protection provide protection against any overload condition that would create excessive junction temperatures.

■ APPLICATION INFORMATIONS

Input/Output Capacitors

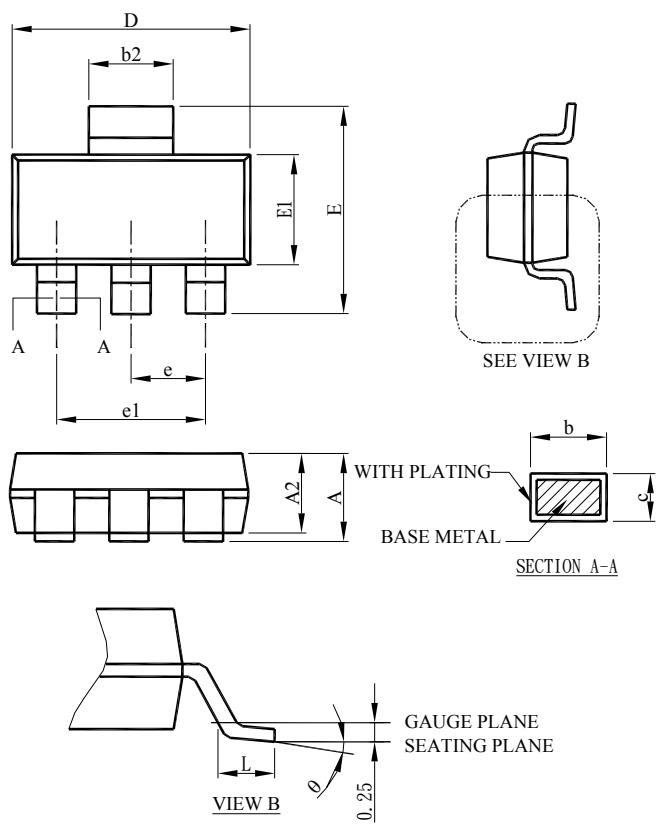

Linear regulators require input and output capacitors to maintain stability. A $4.7\mu F$ or $10\mu F$ electrolytic or tantalum capacitor is recommended for output. The output capacitor should be selected within the Equivalent Series Resistance (ESR).

Sense

Load is not usually close to regulator in actual application. The distance between these two devices results in decay of the load. A SENSE pin of the regulator connects to the load and traces the load voltage. AIC1186 will adjust the output voltage of the regulator to maintain the load at expected voltage.
