

UM4300 / UM7300

FOR ATTENUATOR APPLICATIONS

DESCRIPTION

The UM4300 and UM7300 series combine a diode chip of extremely thick intrinsic region with a low thermal resistance construction. This results in diodes uniquely applicable to very low distortion linear attenuators and specialized functions. The UM4300 series, with large cross-sectional chip area offers the highest power capability, of the two series. The UM7300

series offers lower capacitance. Both diode series are intended for use in linear attenuators operating from HF to beyond 1 GHz. Low distortion is a result of transit time frequencies below 5 MHz. Operated as RF switches, either diode series can be operated at low dc reverse bias voltages, to hold off much higher RF voltage levels.

IMPORTANT: For the most current data, consult MICROSEMI's website: <http://www.microsemi.com>

ABSOLUTE MAXIMUM RATINGS AT 25° C (UNLESS OTHERWISE SPECIFIED)

Package	Condition	UM4300		UM7300	
		P _D	θ	P _D	θ
A	25 °C Pin Temperature	20 W	7.5 °C/W	7.5 W	20 °C/W
B & E	½ in. total length to 25 °C Contact Free Air	10 W	15 °C/W	4 W	37.5 °C/W
C	25 °C Stud Temperature	20 W	7.5 °C/W	7.5 W	20 °C/W
D	25 °C Stud Temperature	15 W	10 °C/W	6 W	25 °C/W
SM	25 °C End Cap Temperature	15 W	20 °C/W	5.5 W	18 °C/W
All	1 us pulse (Single)	500 kW		100 kW	

KEY FEATURES

- Extremely low distortion performance
- Useful frequency range extends below 500 kHz
- Power dissipation to 20 W (UM4300)
- Capacitance as low as 0.7 pF (UM7300)
- Voltage ratings to 1000V
- Non cavity design
- Thermally matched configuration
- Compatible with automatic insertion equipment

APPLICATIONS/BENEFITS

- Isolated stud package available
- Surface mount package available
- RoHS compliant packaging available: use UMX4301SM, etc.
