PRODUCT DESCRIPTION

The P18XX is a versatile spread spectrum frequency modulator designed specifically for a wide range of input clock frequencies from 10 MHz to 170 MHz (see Table 1.1). The P18XX can generate an EMI reduced clock from crystal, ceramic resonator, or system clock. The P18XX-A to -H offers various combinations of spread options and percentage deviations (see Table 1.2). These combinations include Down Spread, Center Spread and percentage deviation range from +/-0.625% to -3.50%.

The P18XX reduces electromagnetic interference (EMI) at the clock source, allowing a system wide EMI reduction for all the down stream clocks and data dependent signals. The P18XX allows significant system cost savings by reducing the number of circuit board layers, ferrite beads, shielding, and other passive components that are traditionally required to pass EMI regulations.

The P18XX modulates the output of a single PLL in order to “spread” the bandwidth of a synthesized clock, thereby decreasing the peak amplitudes of its harmonics. This results in significantly lower system EMI compared to the typical narrow band signal produced by oscillators and most clock generators. Lowering EMI by increasing a signal's bandwidth is called “spread spectrum clock generation”.

The P18XX uses the most efficient and optimized modulation profile approved by the FCC and is implemented by using a proprietary all-digital method.

APPLICATIONS

The P18XX is targeted towards EMI management for memory and LVDS interfaces in mobile graphic chipsets and high-speed digital applications such as PC peripheral devices, consumer electronics, and embedded controller systems.

EMC SOFTWARE SIMULATION

By using PulseCore’s proprietary EMC simulation software – **EMI-lator**[®], radiated system level EMI analysis can be made easier, allowing a quantitative measure on the benefits of PulseCore’s EMI reduction products. The simulation engine of this EMC software has already been characterized to correlate with the electrical characteristics of PulseCore EMI reduction IC’s. **Figure 3** below is an example of the simulation result. Please visit our web site at www.pulsecore.com for information on how to obtain a free copy and demonstration of **EMI-lator**[®].
