- EPIC<sup>™</sup> (Enhanced-Performance Implanted CMOS) Submicron Process
- Unbuffered Output
- Supports 5-V V<sub>CC</sub> Operation
- Package Options Include Plastic Small-Outline Transistor (DBV, DCK) Packages

### DBV OR DCK PACKAGE (TOP VIEW)

NC - No internal connection

#### description

This single inverter gate is designed for 1.65-V to 5.5-V  $V_{CC}$  operation.

The SN74LVC1GU04 contains one inverter with an unbuffered output, and performs the Boolean function  $Y = \overline{A}$ . The SN74LVC1GU04 is characterized for operation from  $-40^{\circ}$ C to  $85^{\circ}$ C.

#### **FUNCTION TABLE**

	INPUT A	OUTPUT Y
ſ	Н	L
l	L	Н

#### logic symbol†

† This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

#### logic diagram (positive logic)

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

SCES215D - APRIL 1999 - REVISED JULY 2000

### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V <sub>CC</sub>	
Input voltage range, V <sub>I</sub> (see Note 1)	
Output voltage range, VO (see Notes 1 and 2)	0.5 V to V <sub>CC</sub> + 0.5 V
Input clamp current, I <sub>IK</sub> (V <sub>I</sub> < 0)	–50 mA
Output clamp current, I <sub>OK</sub> (V <sub>O</sub> < 0)	–50 mA
Continuous output current, IO	±50 mA
Continuous current through V <sub>CC</sub> or GND	±100 mA
Package thermal impedance, $\theta_{JA}$ (see Note 3): DBV package	206°C/W
DCK package	252°C/W
Storage temperature range, T <sub>stq</sub>	–65°C to 150°C

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
  - 2. The value of V<sub>CC</sub> is provided in the recommended operating conditions table.
  - 3. The package thermal impedance is calculated in accordance with JESD 51.

#### recommended operating conditions

			MIN	MAX	UNIT	
VCC	Supply voltage		1.65	5.5	V

## PARAMETER MEASUREMENT INFORMATION $V_{CC} = 1.8 \text{ V} \pm 0.15 \text{ V}$

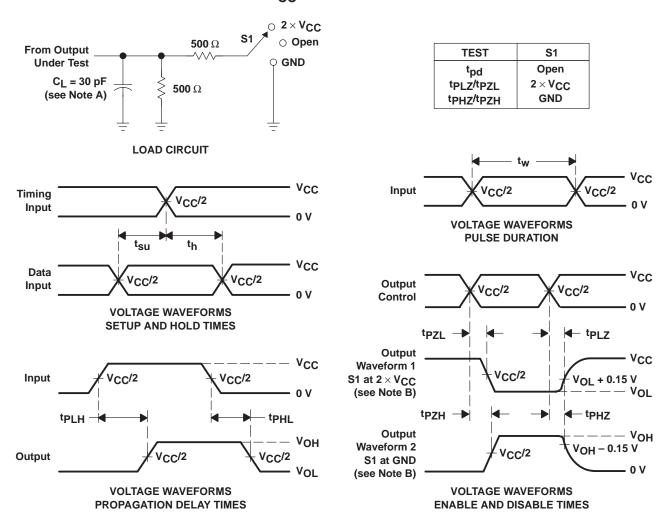

NOTES: A. C<sub>L</sub> includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz,  $Z_O = 50 \Omega$ ,  $t_f \leq 2$  ns.  $t_f \leq 2$  ns.
- D. The outputs are measured one at a time with one transition per measurement.
- E. tpLz and tpHz are the same as tdis.
- F. tpzL and tpzH are the same as ten.
- G. tpLH and tpHL are the same as tpd.

Figure 1. Load Circuit and Voltage Waveforms

### PARAMETER MEASUREMENT INFORMATION $V_{CC} = 2.5 \text{ V} \pm 0.2 \text{ V}$

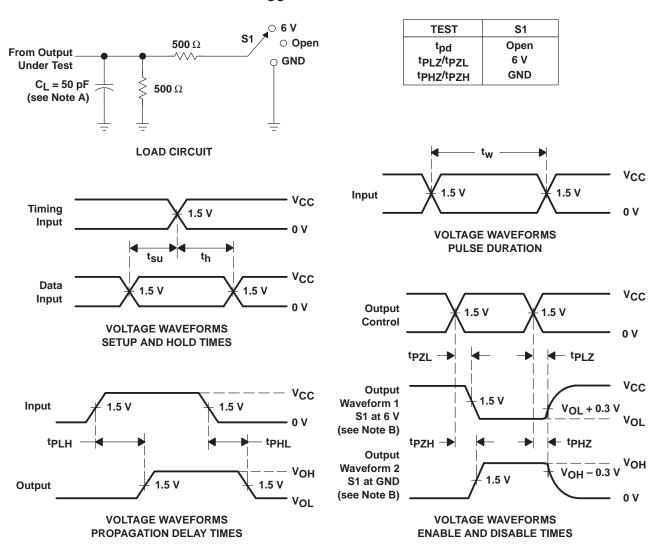

NOTES: A. C<sub>L</sub> includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz,  $Z_O = 50~\Omega$ ,  $t_f \leq$  2 ns.  $t_f \leq$  2 ns.
- D. The outputs are measured one at a time with one transition per measurement.
- E. tpLz and tpHz are the same as tdis.
- F. tpzL and tpzH are the same as ten.
- G. tpLH and tpHL are the same as tpd.

Figure 2. Load Circuit and Voltage Waveforms

### PARAMETER MEASUREMENT INFORMATION $V_{CC}$ = 3.3 V $\pm$ 0.3 V

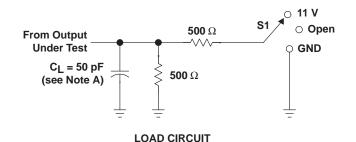

NOTES: A. C<sub>L</sub> includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz,  $Z_Q = 50 \,\Omega$ ,  $t_f \leq 2.5 \,\text{ns}$ ,  $t_f \leq 2.5 \,\text{ns}$ .
- D. The outputs are measured one at a time with one transition per measurement.
- E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
- F. tpzL and tpzH are the same as ten.
- G. tpLH and tpHL are the same as tpd.

#### **IMPORTANT NOTICE**

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgment, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Customers are responsible for their applications using TI components.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
